

Welcome to Investor Day

March 12, 2026

Investor Day 2026

Welcome and Agenda Overview

Bren Higgins, EVP, CFO and Global Operations

March 12, 2026

Today's Agenda – March 12, 2026

9:00 AM	**Welcome & Agenda Overview**	**Bren Higgins** | EVP, CFO and Global Operations
9:05 AM	**Compounding Sustainable Outperformance**	**Rick Wallace** | President and CEO
9:40 AM	**Process Control for the AI Era**	**Ahmad Khan** | President, Semiconductor Products and Customers
10:30 AM	Break	
10:40 AM	**Growing a Durable Revenue Stream Through a Best-In-Class Service Business**	**Brian Lorig** | EVP, Global Services
11:05 AM	**Path to 2030 Target Model**	**Bren Higgins** | EVP, CFO and Global Operations
11:40 AM	Break	
11:50 AM	**Closing Remarks and Q&A Session**	**KLA Management Team**
12:30 PM	End of Webcast – Break	
12:45 PM	**Lunch**	**AR/VR Demos for In-Person Attendees**

Forward Looking Statements

Statements in this presentation other than historical facts, such as statements pertaining to: (i) our financial guidance for the quarter ending March 31, 2026; (ii) the future size of the wafer equipment industry, including advanced packaging; (iii) the industry growth rate for calendar 2027; (iv) our growth rate for calendar 2026; (v) our calendar 2030 financial model and estimates and underlying assumptions and growth drivers; (vi) our process control intensity estimate for calendar 2030; (vii) WFE and KLA systems compound annual growth rate estimates through calendar 2030; (viii) our future product offerings; (ix) future industry demand for semiconductors, WFE, and advanced packaging; (x) our future investment plans; and (xi) future shareholder returns, are forward-looking statements and subject to the Safe Harbor provisions created by the Private Securities Litigation Reform Act of 1995.

These forward-looking statements are based on current information and expectations and involve a number of risks and uncertainties. Actual results may differ materially from those projected in such statements due to various factors, including, but not limited to: our vulnerability to a weakening in the condition of the financial markets and the global economy; risks related to our international operations; evolving Bureau of Industry and Security of the U.S. Department of Commerce rules and regulations and their impact on our ability to sell products to and provide services to certain customers in China; tariffs and other trade restrictions; costly intellectual property disputes that could result in our inability to sell or use the challenged technology; risks related to the legal, regulatory and tax environments in which we conduct our business; differing stakeholder expectations, requirements and attention to environment, social and governance (“ESG”) matters and the resulting costs, risks and impact on our business; unexpected delays, difficulties and expenses in executing against our environmental, climate, or other ESG targets, goals and commitments; our ability to attract, retain and motivate key personnel; our vulnerability to disruptions and delays at our third-party service providers; cybersecurity threats, cyber incidents affecting our and our business partners' systems and networks; our inability to access critical information in a timely manner due to system failures; risks related to acquisitions, integrations, strategic alliances or collaborative arrangements; climate change, earthquake, flood or other natural catastrophic events, public health crises or terrorism and the adverse impact on our business operations; the war between Ukraine and Russia, the armed conflict in Iran and elsewhere in the Middle East, and the significant military activity in those regions; lack of insurance for losses and interruptions caused by terrorists and acts of war, and our self-insurance of certain risks including earthquake risk; risks related to fluctuations in foreign currency exchange rates; risks related to fluctuations in interest rates and the market values of our portfolio investments; risks related to tax and regulatory compliance audits; any change in taxation rules or practices and our effective tax rate; compliance costs with federal securities laws, rules, regulations, NASDAQ requirements, and evolving accounting standards and practices; ongoing changes in the technology industry, and the semiconductor industry in particular, including future growth rates, pricing trends in end-markets, or changes in customer capital spending patterns; our vulnerability to a highly concentrated customer base; the cyclicality of the industries in which we operate; our ability to timely develop new technologies and products that successfully address changes in the industry; risks related to artificial intelligence; our ability to maintain our technology advantage and protect proprietary rights; our ability to compete in the industry; availability and cost of the materials and parts used in the production of our products; our ability to operate our business in accordance with our business plan; risks related to our debt and leveraged capital structure; we may not be able to declare cash dividends at all or in any particular amount; liability to our customers under indemnification provisions if our products fail to operate properly or contain defects or our customers are sued by third parties due to our products; our government funding for research and development is subject to audit, and potential termination or penalties; we may incur significant restructuring charges or other asset impairment charges or inventory write offs; we are subject to risks related to receivables factoring arrangements and compliance risk of certain settlement agreements with the government; and risks related to the Court of Chancery of the State of Delaware being the sole and exclusive forum for certain actions and proceedings. For other factors that may cause actual results to differ materially from those projected and anticipated in forward-looking statements in this press release, please refer to KLA's Annual Report on Form 10-K for the year ended June 30, 2025, and other subsequent filings with the Securities and Exchange Commission (including, but not limited to, the risk factors described therein). KLA assumes no obligation to, and does not currently intend to, update these forward-looking statements.

Guidance for Q3 FY2026 – March 2026 Quarter

March 2026 Quarter Guidance

Revenue	$3.35B +/- $150M
Non-GAAP Gross Margin*	61.75% +/- 1%
GAAP Diluted EPS	$8.85 +/- $0.78
Non-GAAP Diluted EPS*	$9.08 +/- $0.78

Macro Assumptions

Semi PC Revenue By End Market

- Foundry/Logic: ~60%
- Memory: ~40% → DRAM ~85% | NAND ~15%

Model Assumptions

- Non-GAAP Operating Expenses*: ~$645M
- Other Income & Expense (OIE)*, Net: ~$25M
- Effective Tax Rate*: ~14.5%
- Diluted Share Count: ~131.7M

Source: KLA filings and estimates, Gartner April 2022

Strong, Resilient and Delivering Shareholder Value

March 12, 2026 Business Update

Industry

- CY26 business environment continues to strengthen across all segments; Foundry / Logic, Memory and Advanced Packaging
  - Wafer Equipment, incl. Advanced Packaging, now expected to be in the range of $135-140B *(up ~11 to 15% from CY25)*
- CY27 visibility improving. Expect 2027 growth rate to be similar or higher than CY26

March 12, 2026 Business Update

Industry

- CY26 business environment continues to strengthen across all segments; Foundry / Logic, Memory and Advanced Packaging
  - Wafer Equipment, incl. Advanced Packaging, now expected to be in the range of $135-140B *(up ~11 to 15% from CY25)*
- CY27 visibility improving. Expect 2027 growth rate to be similar or higher than CY26

KLA

- Expect quarter to quarter sequential growth to continue throughout CY26
- CY26 revenue growth now expected to be in the high teens percent (year-over-year) driven by the strengthening second half of the calendar year for Semi PC systems
- Announced our 17th consecutive annual dividend increase. +21% to $2.30 / Qtr. or $9.20 annualized
- Announced $7B additional share repurchased authorization. Increasing remaining authorization to ~$11B
  - Share repurchase authorization to be completed over the next ~24 months (subject to market conditions)

Investor Day 2026

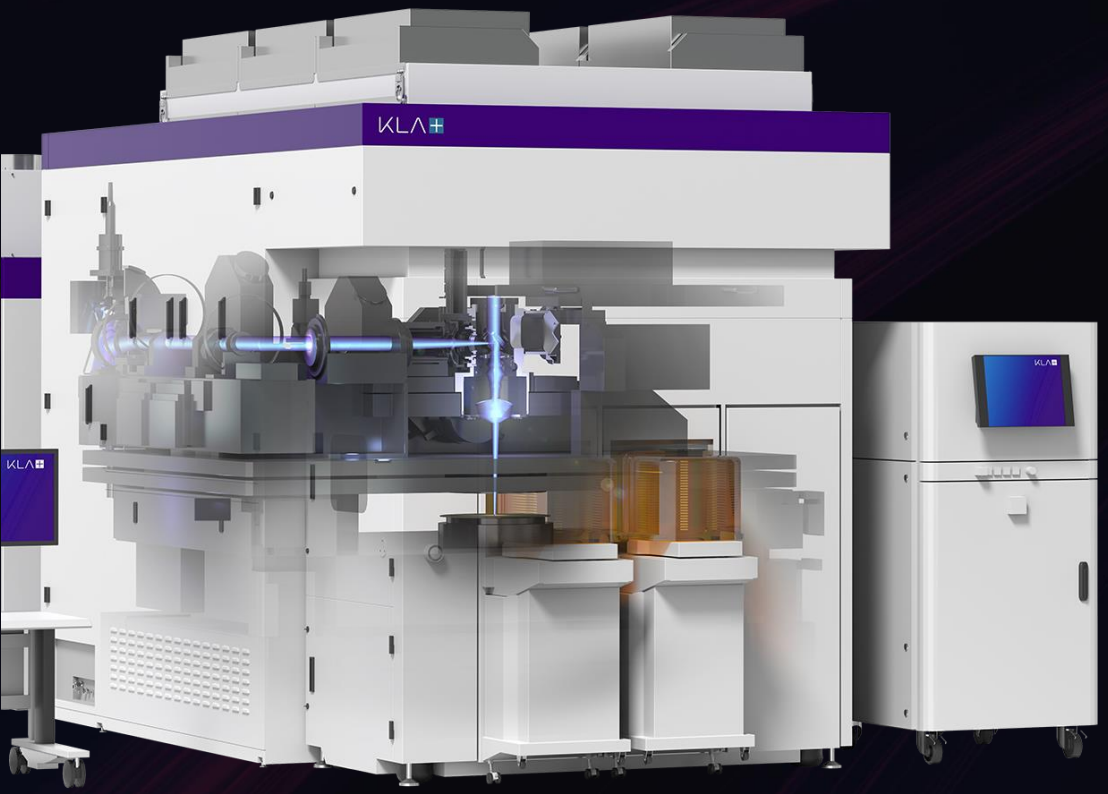

KLA

Compounding Sustainable Outperformance

Rick Wallace, President & CEO

March 12, 2026

Today’s Key Themes

1. Uniquely positioned for growth as technology complexity and AI increases
2. Deep customer relationships and our KLA Operating Model driving sustainable outperformance
3. Best-in-class technology compounder strategically building on a strong track record of value creation

Agenda

1. **Who we are**
2. Semiconductor landscape
3. Role of process control
4. KLA's offerings
5. Measuring success

KLA at a Glance

Global Technology Leader

Providing advanced inspection tools, metrology systems, process solutions and data analytics for manufacturing semiconductors

Founded in
1976

Headquarters in
Milpitas, CA

~16,500

GPUs in the AI Data Center – KLA Example 2021

	Last Generation
Processor	CPU based
Algos	Historical
Code change	Baseline
Cost	1x
Power	1x

Switching Costs to GPU-Based Server Relatively High – Far Superior New Platform

GPUs in the AI Data Center – KLA Example 2021

	Last Generation	New Generation (Option 1)
Processor	CPU based	CPU based
Algos	Historical	Historical
Code change	Baseline	Minimal
Cost	1x	1.8x
Power	1x	1.5x

Switching Costs to GPU-Based Server Relatively High – Far Superior New Platform

GPUs in the AI Data Center – KLA Example 2021

	Last Generation	New Generation (Option 1)	New Generation (Option 2)
Processor	CPU based	CPU based	GPU Based
Algos	Historical	Historical	New / Much Better
Code change	Baseline	Minimal	Major
Cost	1x	1.8x	1.2x
Power	1x	1.5x	.7x

Switching Costs to GPU-Based Server Relatively High – Far Superior New Platform

The Unique Challenges of HPC / AI

Logic Size & Complexity

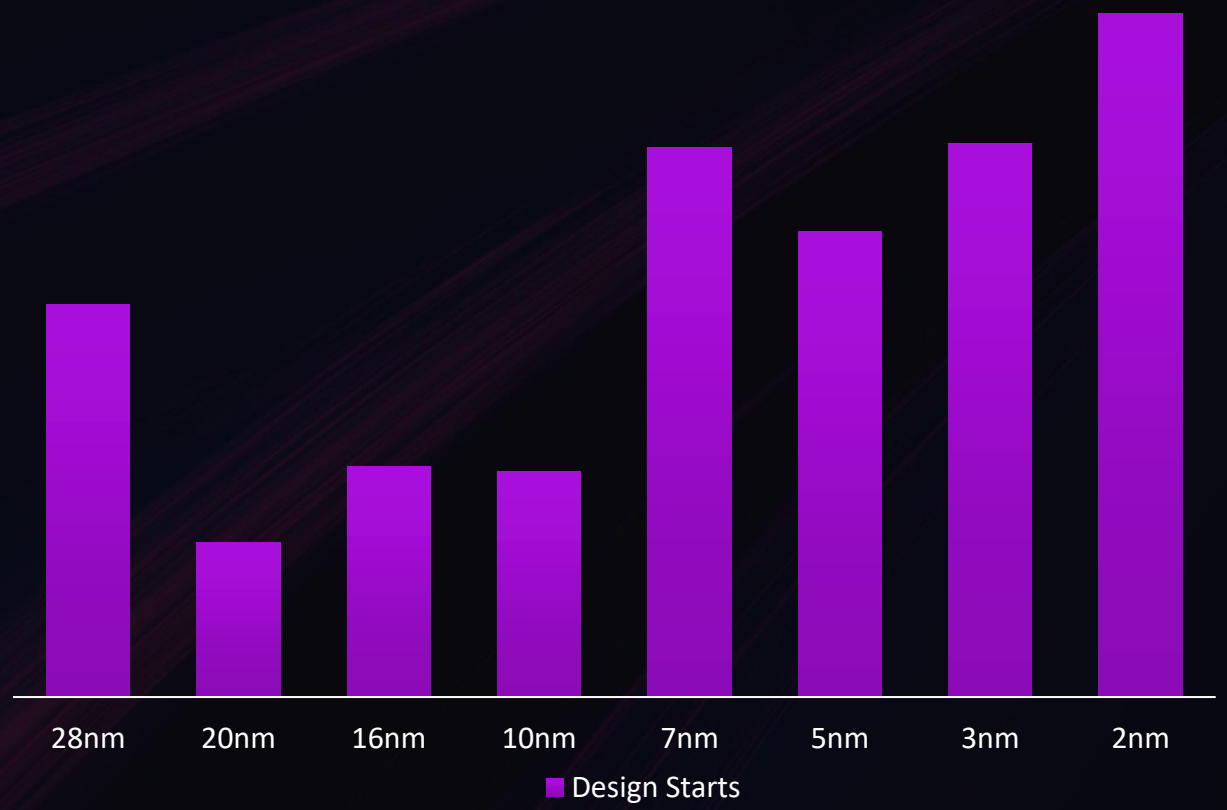

Memory

Advanced Packaging

If KLA Could Design a Market – This Would Be It

AI is the Primary Driver Behind More Designs by More Players

Drivers for “Custom Silicon”

- PC / smartphone optimization
- Cloud compute optimization
- Silicon “systems” for AI
- Silicon “systems” for Gen AI

Sources: KLA Analysis, TechInsights Mar 26
Note: Design Starts in the first 3 years of HVM. Part of 3nm and 2nm are forecasted

Agenda

1 Who we are

2 Semiconductor landscape

› 3 **Role of process control**

4 KLA's offerings

5 Measuring success

KLA – Inspection & Metrology for 50 Years

We Originally Thought it was About Finding Defects and Making Measurements – It's Not

Inspection
Find Critical Defects

You can't fix
what you can't find

Metrology
Measure Critical Parameters

You can't control
what you can't measure

Learning faster is the only sustainable competitive advantage in semiconductor manufacturing

Process Control Enables Higher Learning Rate

Defects and Variations Occur Throughout the Process

Sources of Defects

1. Wafer Manufacturing
2. Reticle Manufacturing
3. Starting Materials
4. Particles
5. Lithography Process
6. Etch Process
7. Deposition Process
8. Chemicals
9. Materials
10. Pattern Interactions
11. Design-Dependent
12. Mechanical Handling
13. Packaging and Back-End Process

Variations

1. Film Thickness Variations
2. Critical Dimension Variations
3. Overlay Errors
4. Line Edge Roughness
5. Line Width Roughness
6. Etch Depth
7. Profile Changes
8. Composition Properties

The Role of Sampling in Intensity

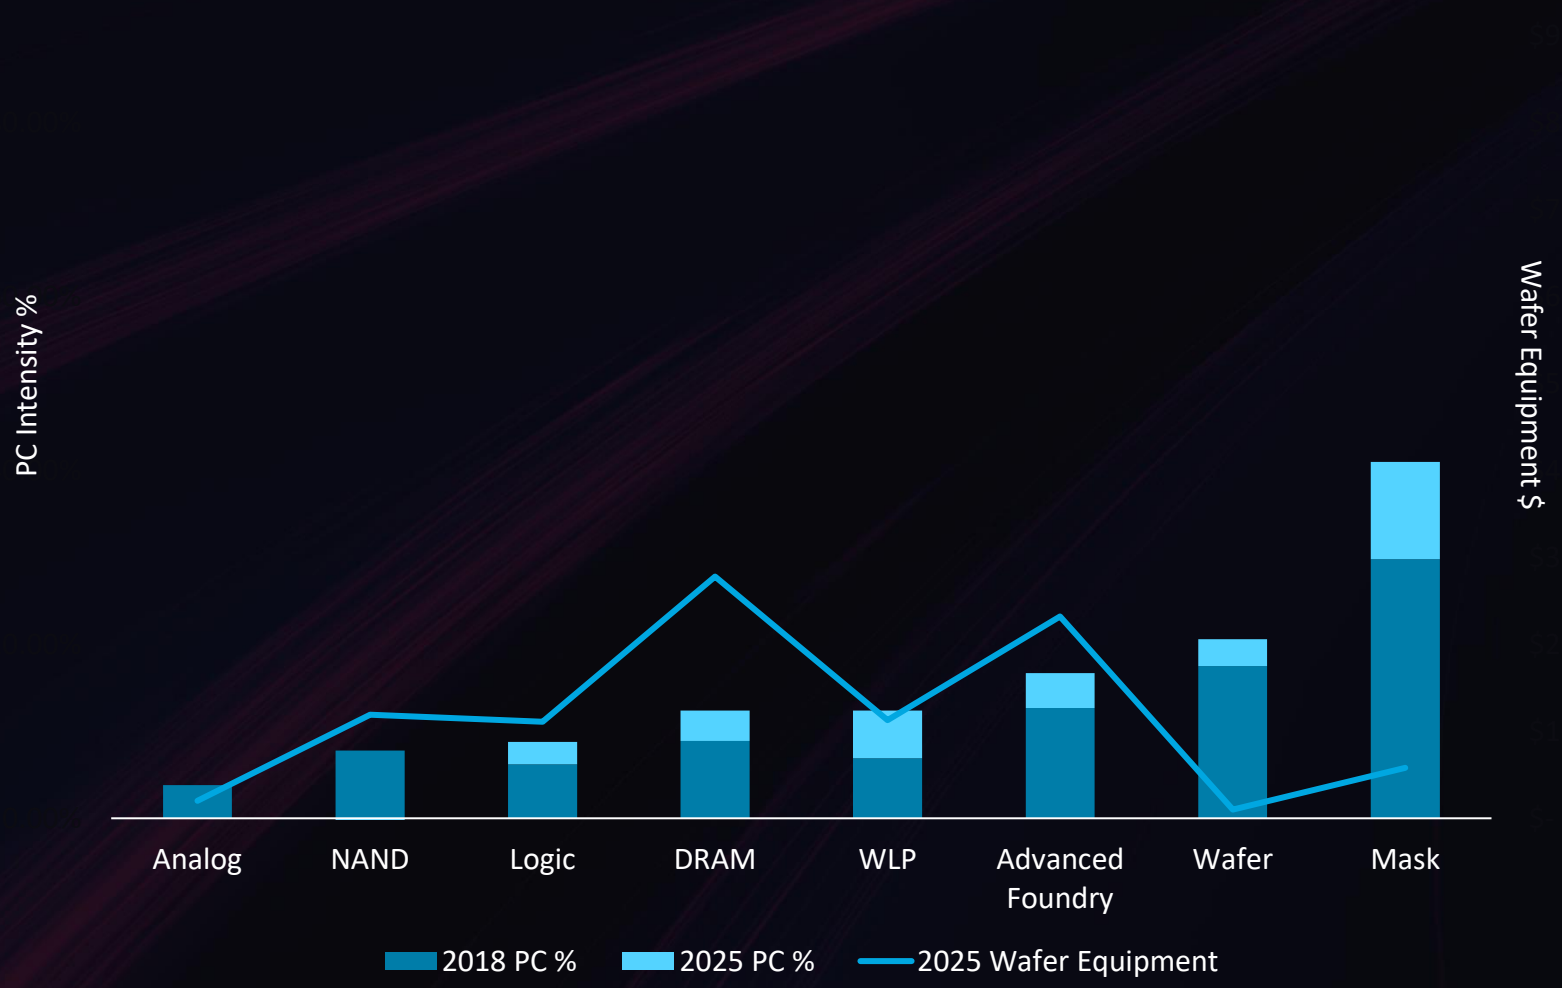

Decisions of Where and How Much to Measure and Inspect Drive Intensity

Complexity & Economics Drive Process Control Intensity

- Technology transitions
- Shrinking process windows
- More process steps
- More process flows
- Increased # of designs
- Larger chips
- Less redundancy / repair
- Logic base chip
- Transition from sampling to HVM monitoring
- WLP complexity
- More expensive masks, wafers and chip

Sources: KLA Analysis, Factset Mar 2026, Gartner Mar 2026, Techinsights Mar 2026

Agenda

1 Who we are

2 Semiconductor landscape

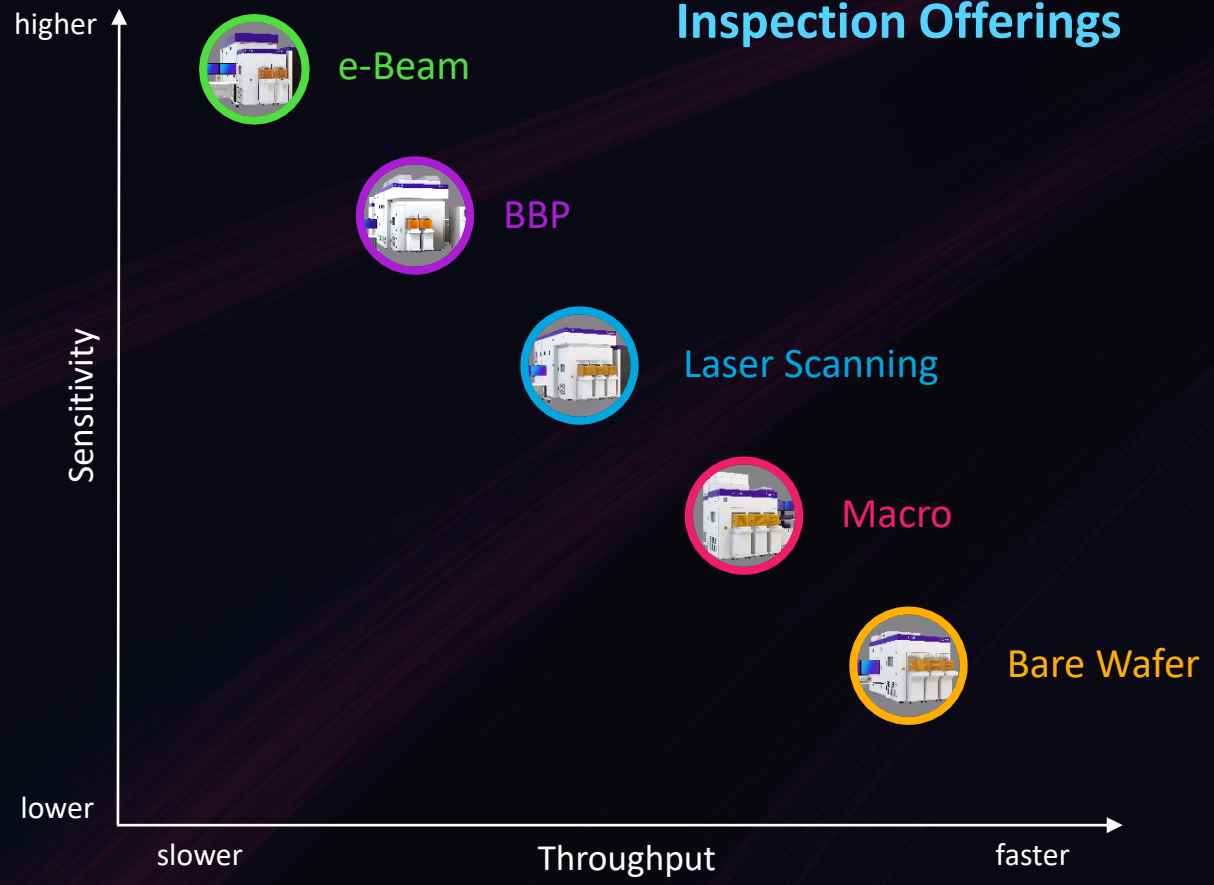

3 Role of process control

› 4 **KLA's offerings**

5 Measuring success

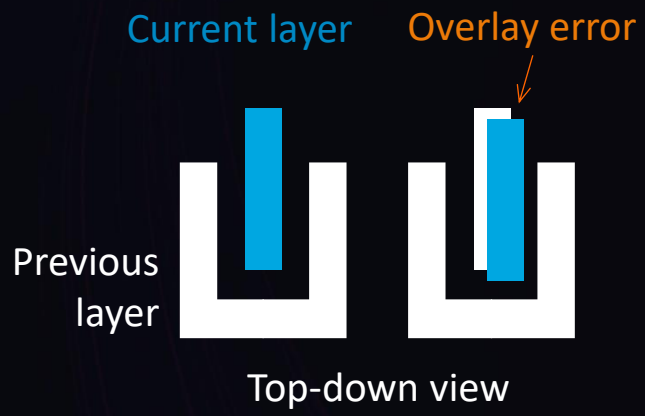

There is a KLA System for Each Inspection & Measurement Need

Inspection Offerings

Measurement Offerings

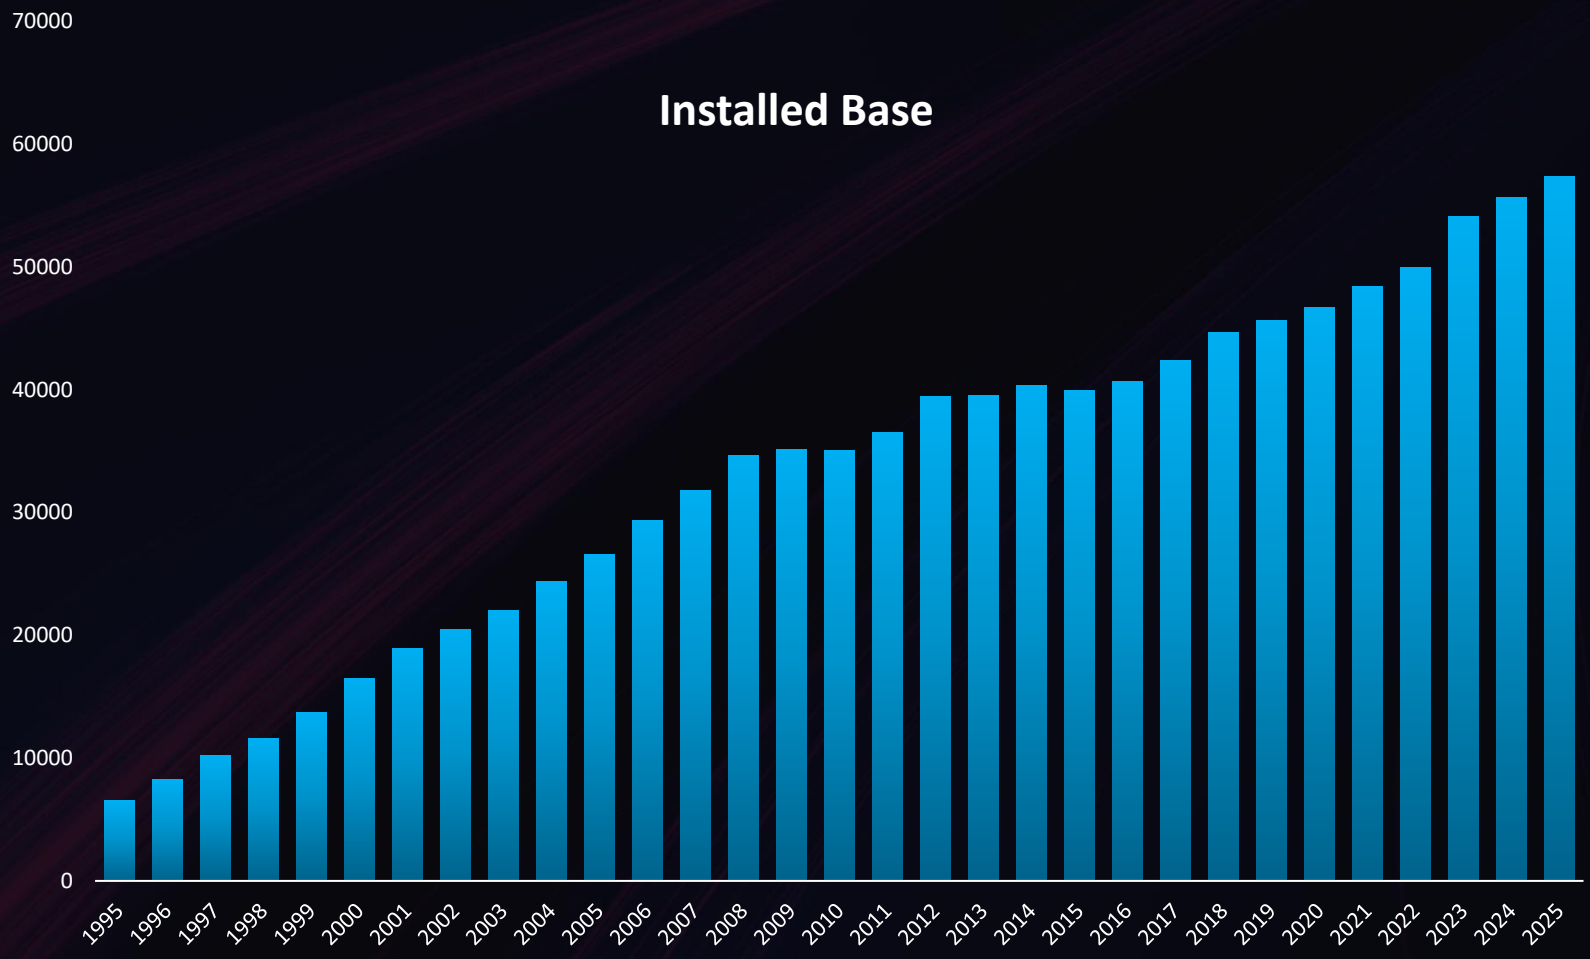

- Overlay
- Films
- Dimension
- Wafer Shape
- Reticle Pattern
- In Situ Process

All Delivered With Common Core Technologies and Services

KLA Services Enhance Life of Investment for Customers

High Mix, High Complexity Drives Valuable Services Offerings

- Ramp management
- Lifecycle management
- Predictive maintenance
- Training
- Software applications
- Fab optimization & relocation
- Enhancements & upgrades

Agenda

1 Who we are

2 Semiconductor landscape

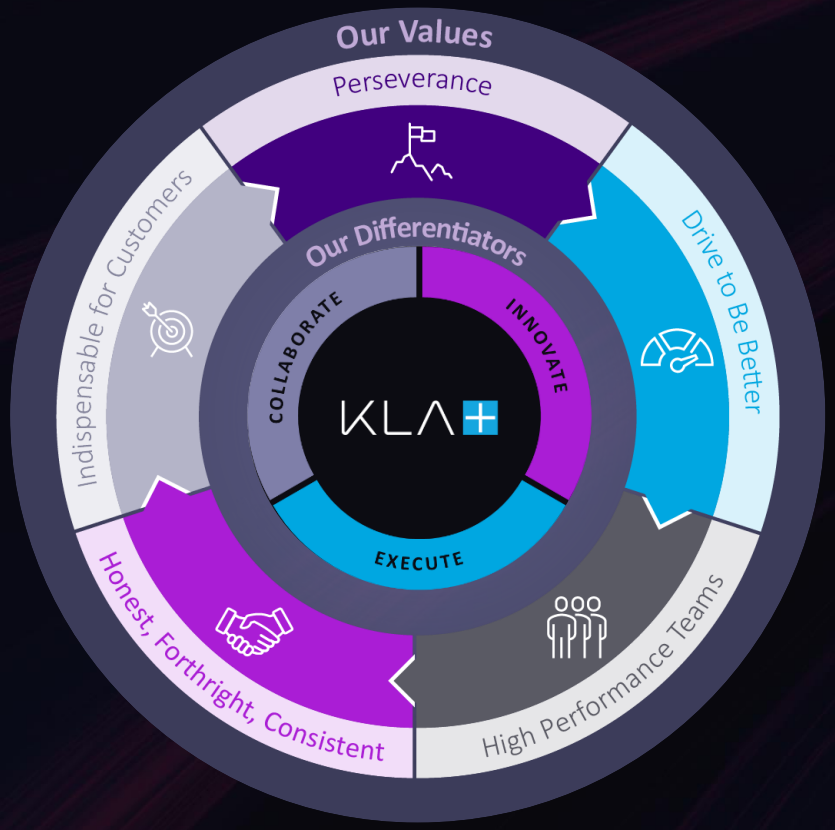

3 Role of process control

4 KLA's offerings

› 5 **Measuring success**

The KLA Operating Model Guides Our Strategy and Differentiation

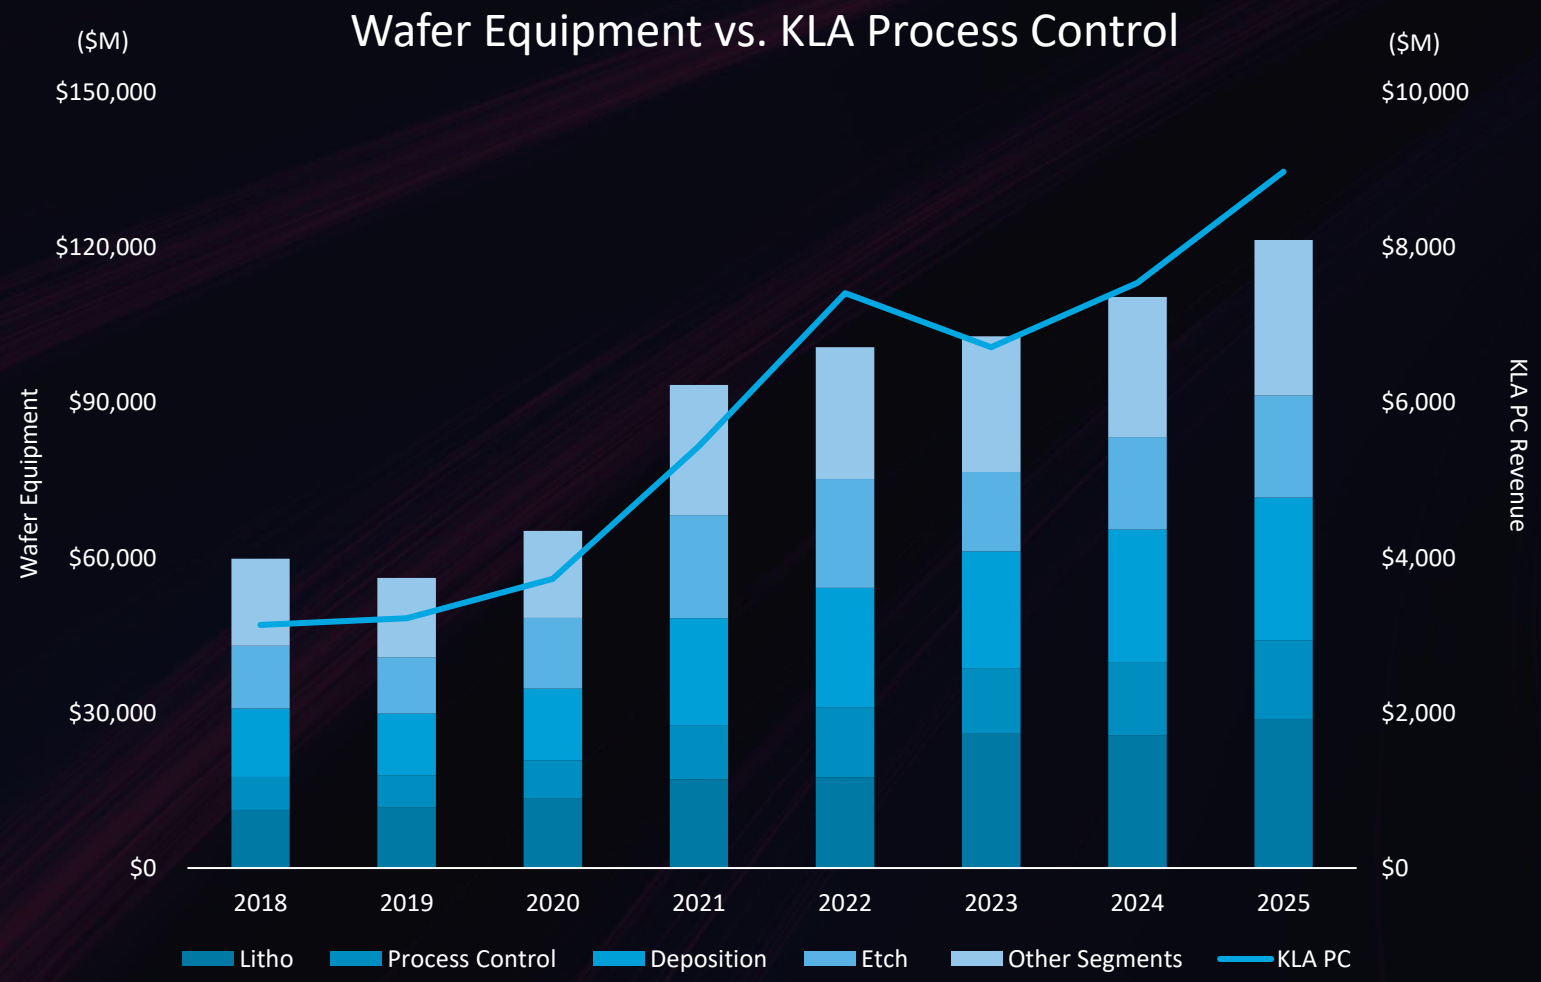

KLA Operating Model at Work

- Common language across multiple divisions
- BKMs implemented across acquired companies
- Operational rigor to prioritize performance
- Scorecard measurement against progress

Scorecard Example by Business Group

Metrics	Measure
Intensity	Share of wafer equipment
Share	Process control market share
Productivity	Gross margin & operating margin
Talent	Attracting - engaging - retaining

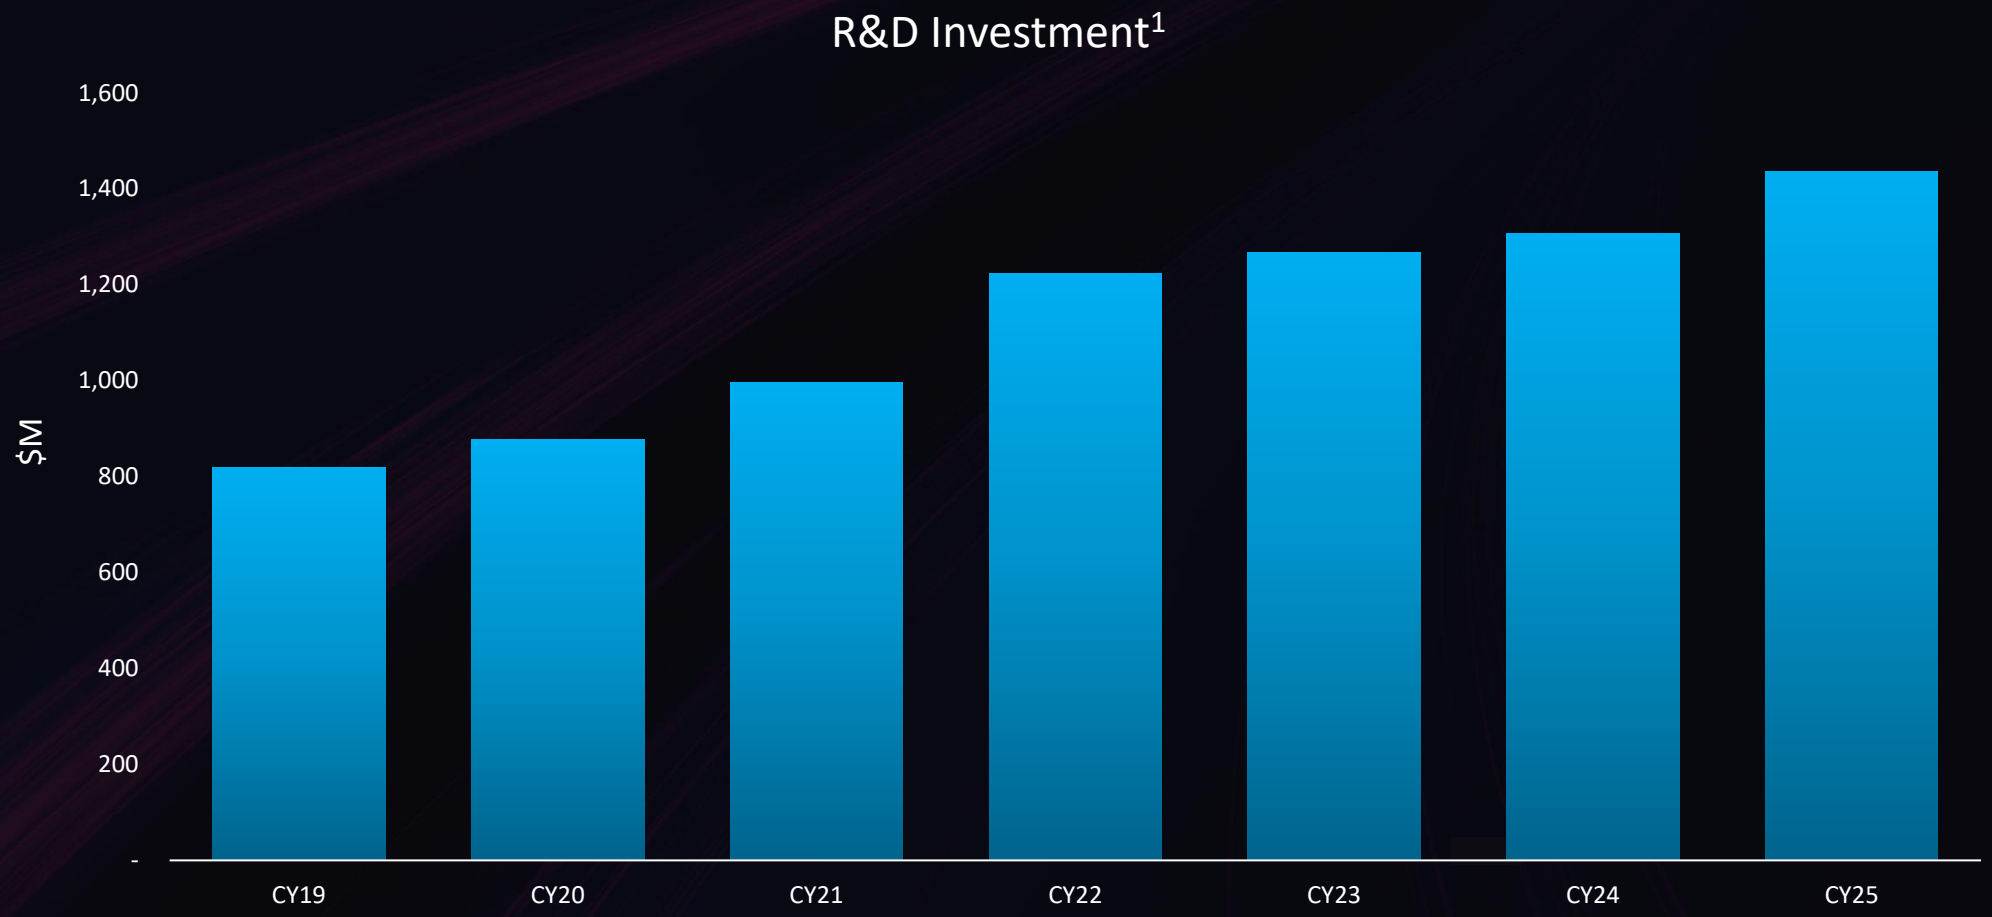

Driving Process Control Intensity

Segment	19-25 CAGR
Lithography	16%
Process Control	**16%**
Deposition	15%
Etch	10%
Other Equipment	12%
Wafer Equipment	**14%**
KLA PC	**19%**

Sources: KLA Analysis, Gartner Mar 2026

Technical Investments are Essential to Our Portfolio Strategy

Consistent Investment in R&D Drives Our Differentiated Portfolio Advantage

[1] Numbers reflected are non-GAAP, please see GAAP reconciliation in appendix

Driving Market Leadership Through Technology Investment

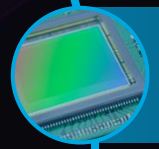

Illumination Sources
broadband plasmas, lasers, LEDs, X-rays, electron beams

Optics
objectives, lenses, mirrors, polarizers, filters for DUV/UV/Vis/IR light, X-rays, electron-beams

Sensors
image sensors, photo multiplier tubes, CMOS sensors, cameras

Mechanics
precision stages, motion control, robotics

Physical Sciences
plasma physics, wet chemistry, dry vapor etching & deposition

Image and Data Processing
high-speed data processing, high performance compute, AI/ML/DL, algorithms, computational physics

Long-Term Innovation Roadmaps Critical for Competitive Advantage

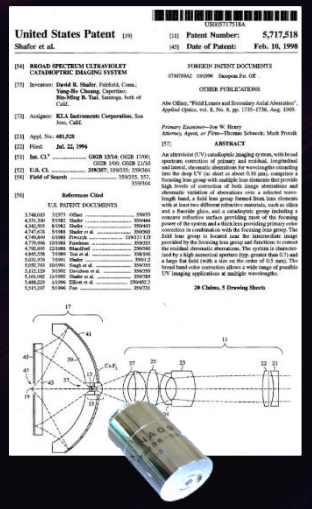

2020

Off-the-shelf objective

2 Peers include: AMAT, ASML, LRCX

KLA Focuses on Finding and Keeping Great Talent

Attracting

- World class technology
- Global leadership
- Critical industry

Engaging

- Strong culture
- World class problems
- Continuous learning opportunities

Retaining

- Competitive compensation
- Promote from within
- Pride in being part of KLA

The Industry has Changed Since our 2019 & 2022 Investor Days

Where We Are Now

AI is driving the semiconductor industry and enabling KLA

Process Control enables the advances needed for the AI buildout

KLA will be successful regardless of who wins the rest of the AI stack

2030 Model Assumptions

Semi Market	~11% CAGR CY25-CY30
Capital Intensity	Equipment growth slightly > Semi to $215B +/- $20B
Process Control Market	Growth > Wafer Equipment
KLA Share	Growth at leading edge of core WFE Advanced packaging augments growth
Services	Growth at 13-15%

Keep Looking Ahead

$26B

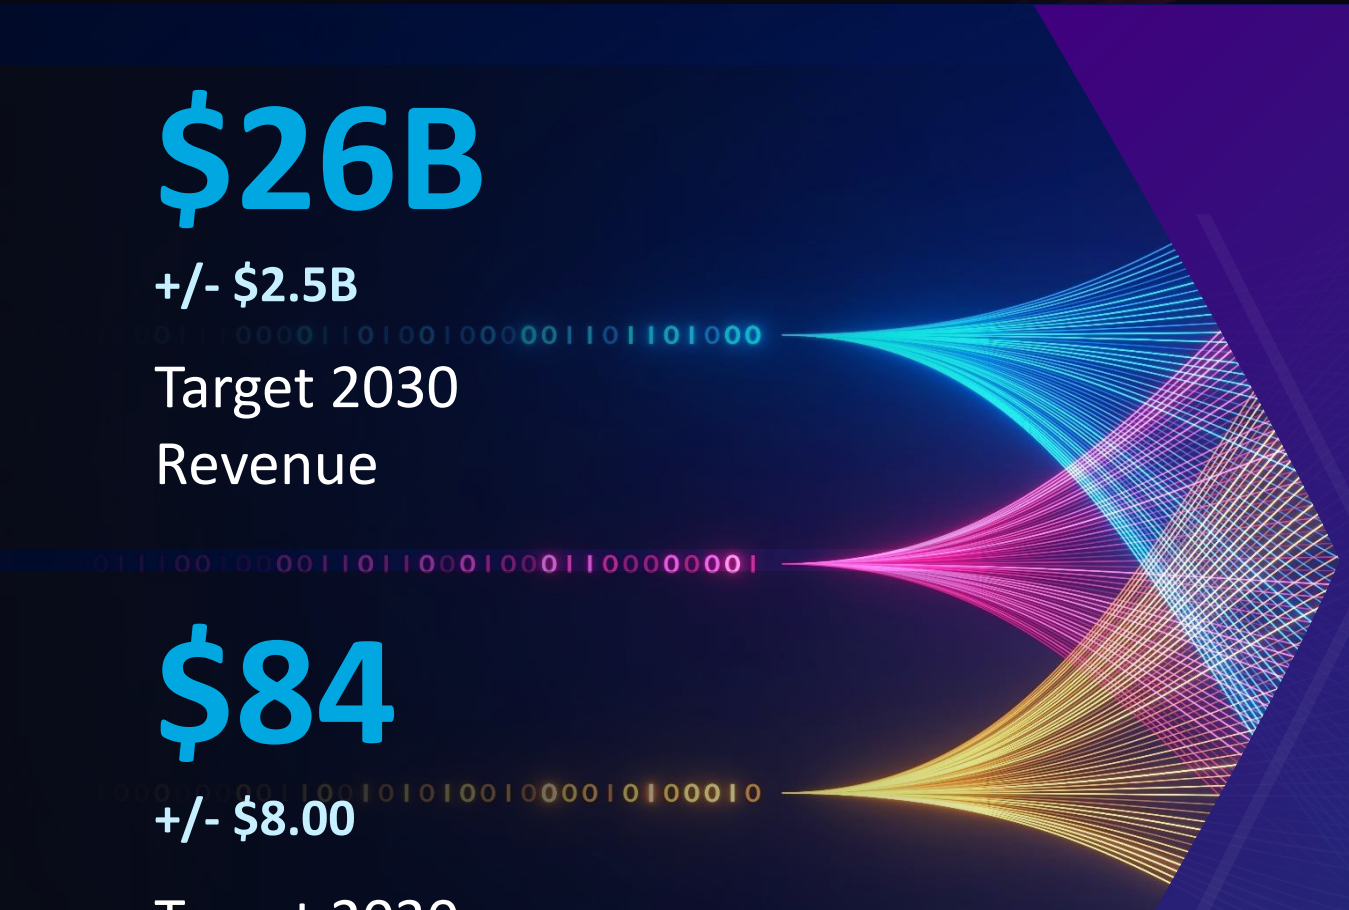

+/- $2.5B

Target 2030
Revenue

$84

+/- $8.00

Target 2030
Diluted EPS*

- Sustainable outperformance driven by KLA Operating Model
- 2030 Target Model powered by collaboration, innovation and execution
- Optimizing total shareholder return with a focus on assertive capital allocation

*Non-GAAP financial metric

Investor Day 2026

KLA

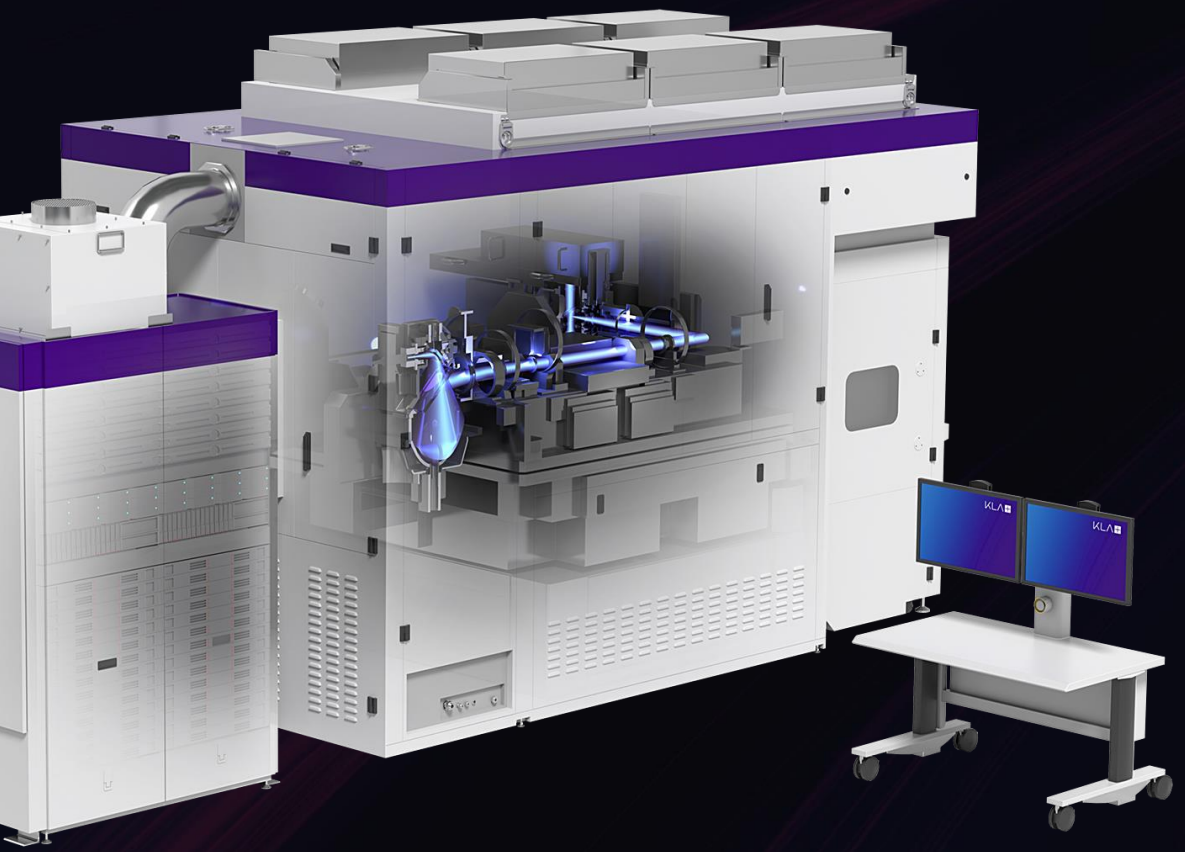

Process Control for the AI Era

Ahmad Khan

President, Semiconductor Products and Customers

March 12, 2026

Key Messages

1. **Inflections, share gains and portfolio expansion** will increase KLA's process control **intensity** from 7.4% (CY25) to ~9% (CY30)

2. Strong **customer collaboration** enables a broad, **differentiated product portfolio**, reinforcing KLA's competitive advantage

3. Unique, connected portfolio, driven by **innovations in hardware and AI**, provides customers with the best process control performance

CAGR (CY25 – CY30): Wafer Equipment 11% - 13% | KLA Systems 15% - 17%

The KLA Operating Model Provides a Strategic Engine for Product Differentiation and Competitive Advantage

Strategy: Provide leading technologies, differentiated solutions and superior customer experiences by leveraging our operating model

Collaboration

KLA builds strong customer partnerships, producing solutions that address the industry's critical technology inflections and economic challenges

Innovation

KLA's world-class point products and co-intelligent solutions enabled by AI deliver faster ramp and higher yield, ensuring customer profitability

Execution

KLA's strong presence in R&D and HVM for logic, memory and advanced packaging drives process control intensity, while our product differentiation secures clear market leadership

KLA Semi PC Share of Wafer Equipment

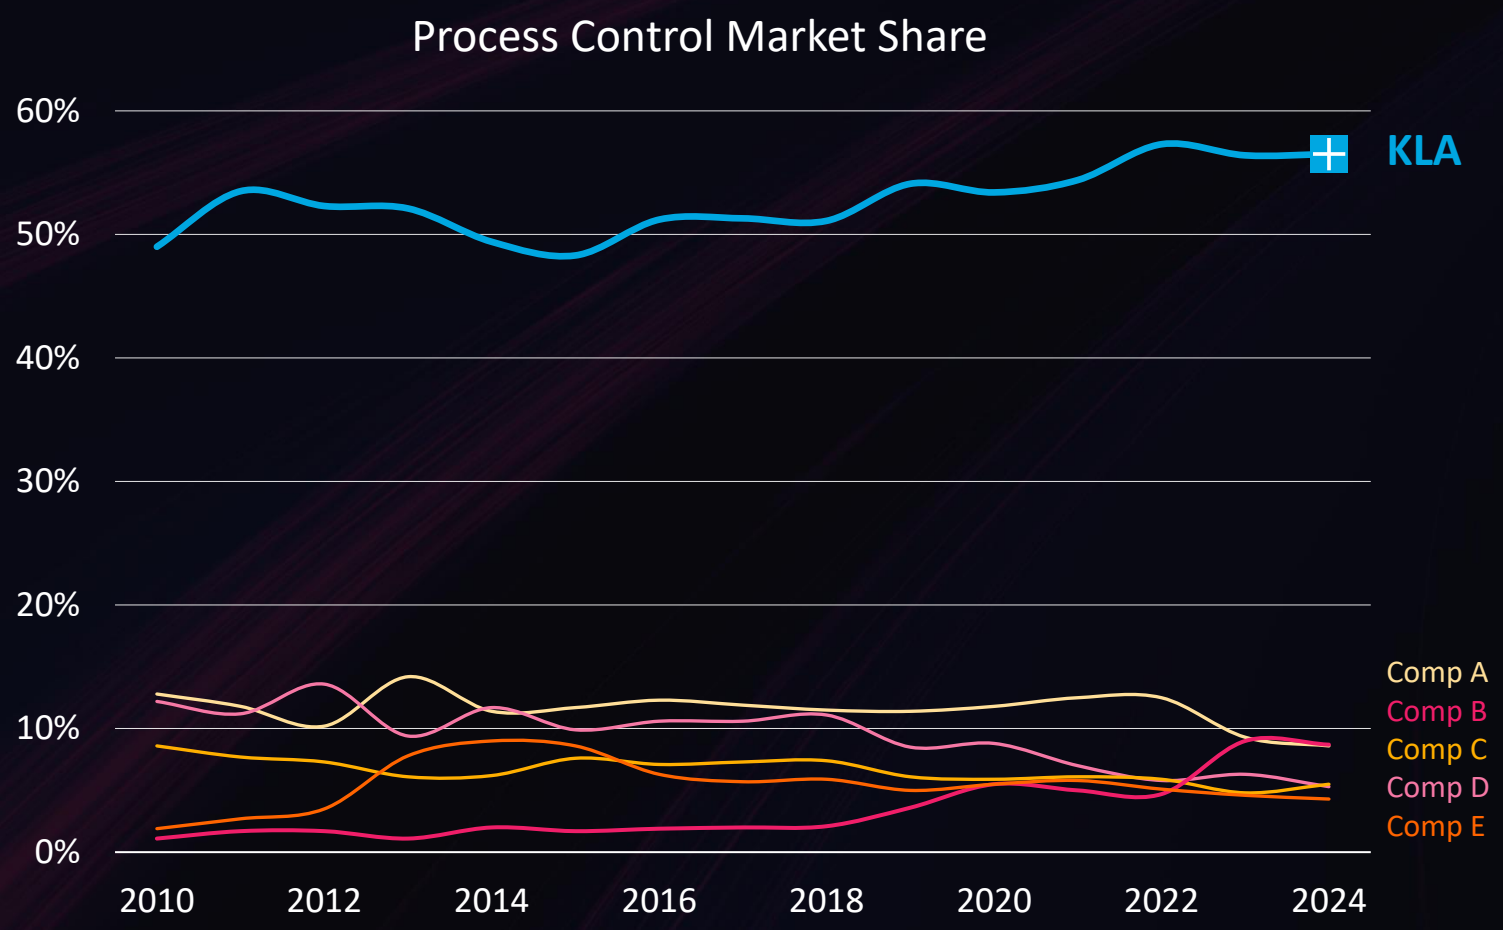

Multiple Device Segments in R&D and HVM Drive New +7% Baseline

Wafer Equipment includes WFE (Wafer Front End) and WLP (Wafer-Level Packaging)

KLA Continues to Decisively Lead the Industry

#1 Market Position is Driven by Technology Differentiation and Strength in Execution

56.5%

KLA Share in 2024

- Up 2% from 2021
- 6.5x nearest competitor
- Gains in optical, e-beam, advanced packaging, reticle inspection

Source: Gartner April 2025

Multiple Process Control Segments Drive Intensity and Share

Higher Cost of Failure in Today's AI-Driven Semiconductor Landscape

Reticle Inspection

- 100% defect capture is mandatory
- Multiple inspection products are required to capture 100% of defect types

Unpatterned Inspection

- More process steps, process tools and qualification are driving baseline defectivity importance

Optical Inspection

- More layers
- More defect types
- Higher sampling
- New applications

e-Beam Inspection

- 3D architectures introduce buried and electrical defects in HVM
- Co-intelligent solutions lead to faster time to results for optical systems in HVM

Metrology

- Critical films metrology for Vt control optimizes device power and performance

Advanced Packaging

- Packaging delivers final revenue
- Packaging yield is a sum of all parts: front-end, interposer and stacking

Data Analytics

- Fab-wide process control enables faster ramps and higher yield

Multiple, Leading-Edge Chips Are Assembled to Form a Complete System

AI Accelerator for Server

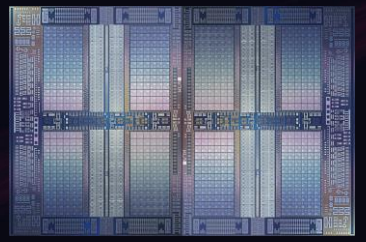

Leading-edge logic GPUs

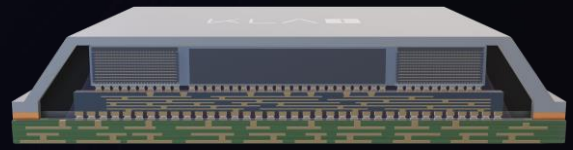

Multiple HBM modules, 8 to 12 chip stacks

Large, complex package using 2.5D/3D heterogeneous integration and ~100 chips

AI-Driven Inflections Accelerate Challenges for Our Customers

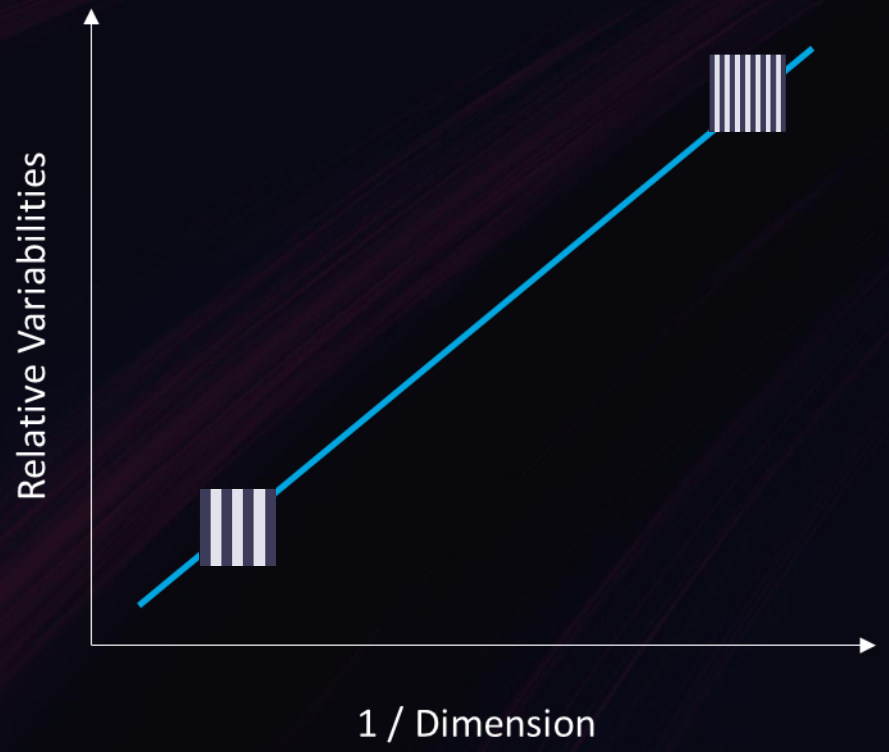

Advanced Logic	Memory	Advanced Packaging
▪ Smaller pattern dimensions	▪ More logic, less pattern redundancy	▪ Chip stacking
▪ Larger chip size	▪ Larger chip size	▪ Rising package value
▪ 3D transistor architectures	▪ EUV	▪ Interconnect scaling

Critical Defect Monitoring and Increased Variability Control are Required for Advanced Logic Manufacturing

Logic Inflections

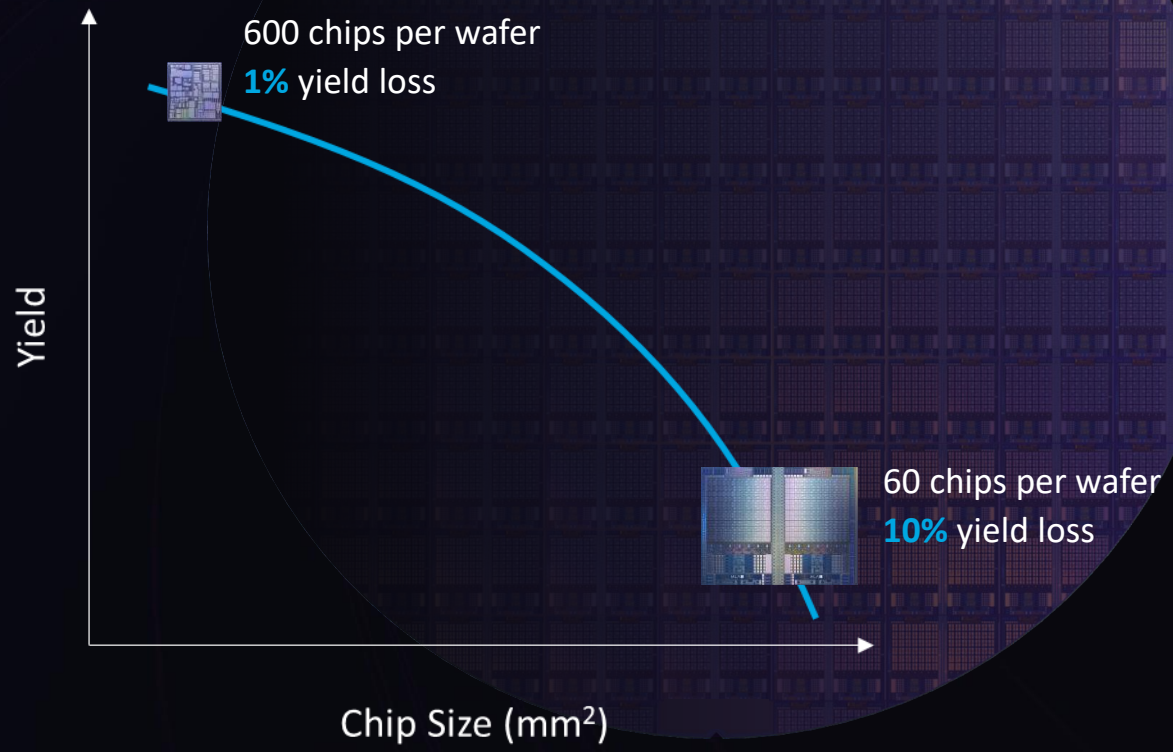

Smaller Pattern Dimensions

- Variability is inversely proportional to printed feature size

Larger Chip Sizes

- Steep yield erosion on larger chip sizes

Complex Transistor Architectures Increase Demand for Defect and Variability Control

Logic Inflections

Inspection

find critical defects

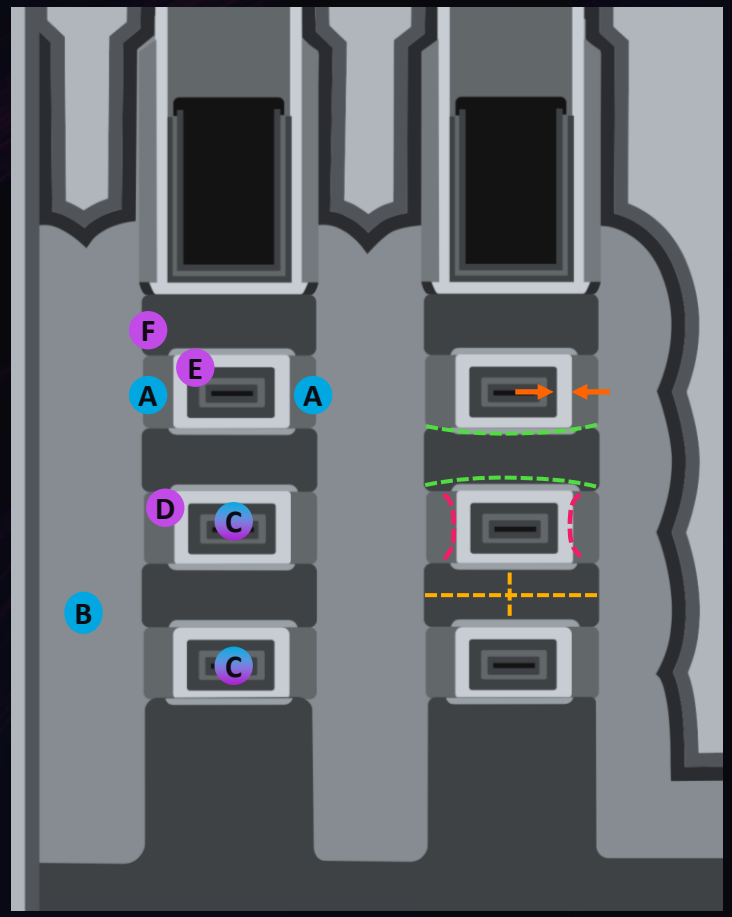

Increase Yield

Buried defectivity

a. Spacer under etch residue
b. Source / Drain missing epi
c. SiGe residue
d. HK / work function metal filled epi
e. HKDP gate extrusion
f. Bright voltage contrast at epi layer

BBP optical defect inspection
e-beam defect inspection

3D Transistor Inflections

Metrology

measure critical parameters

Increase Performance

Work function metal and HKMG thickness

Nanosheet release integrity

Inner spacer and recess depth

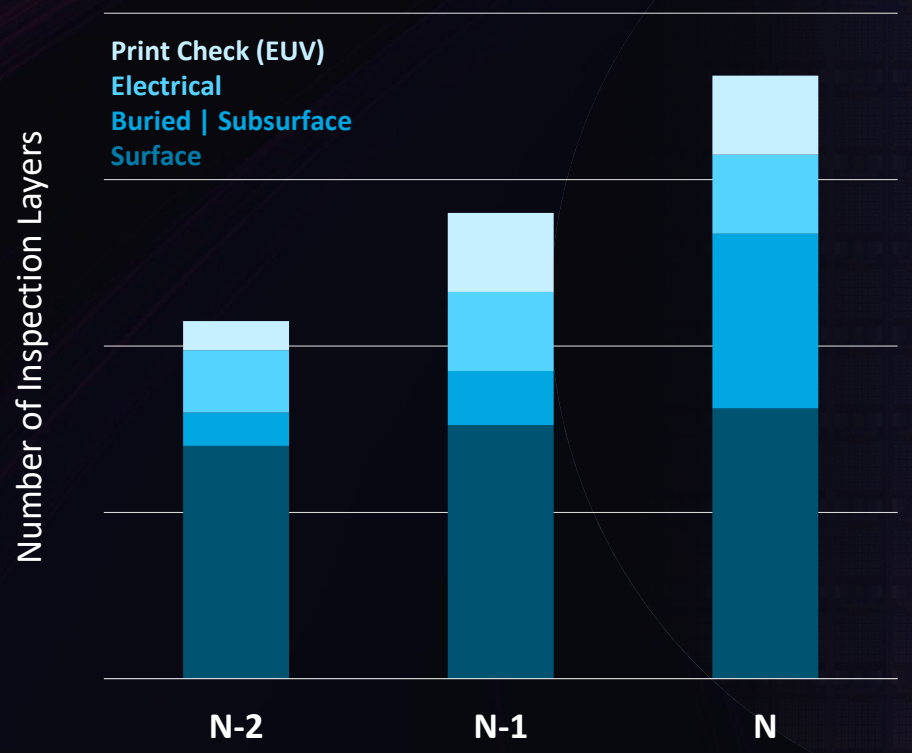

Nanosheet CD and thickness

KLA's Products Deliver Solutions for Critical Logic Challenges

Collaboration

- Comprehensive BBP and e-beam inspection portfolio provides capture of all critical defect types at optimized cost of ownership
- Multi-system solution for Ångstrom-level critical device measurements enables variability and Vt control
- Multi-system reticle requalification strategy with reticle inspection and wafer print qualification reduces high-volume manufacturing yield risk

Patterned Wafer Inspection

KLA internal analysis

30%

Increase in Inspection Layers with Every Node

~$1B

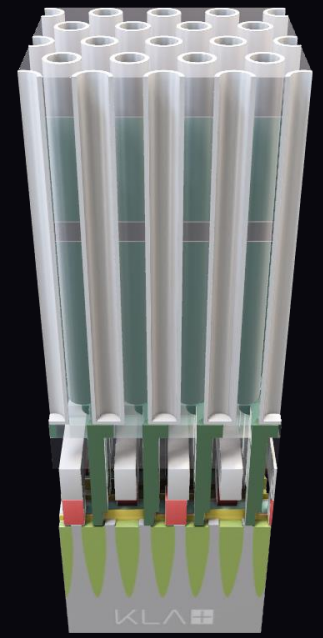

KLA Incremental Revenue vs. N-2[1]

1: For equivalent wafer starts

DRAM and HBM Memory Chip Designs Drive High Yield and Reliability Requirements

Memory Inflections

	Higher Performing Logic Circuitry	EUV Lithography	Large Chips	Less Circuit Redundancy
Technology Driver	Better logic performance is required to support smaller capacitors	Patterning advancement for smaller design rules	More logic, more DRAM transistors and more TSVs produce higher bandwidth	Percentage of cell area decreases
Implications for Process Control	▪ More logic requires improved capture of defects ▪ Higher variability control	▪ Smaller defects print ▪ New process control applications (e.g., reticle qualification)	▪ One killer defect has a higher impact on yield	▪ Higher yield impact of defects

Today's Server Memory Requirements are Much More Stringent than Consumer Memory

DRAM and HBM Memory Chip Designs Drive High Yield and Reliability Requirements

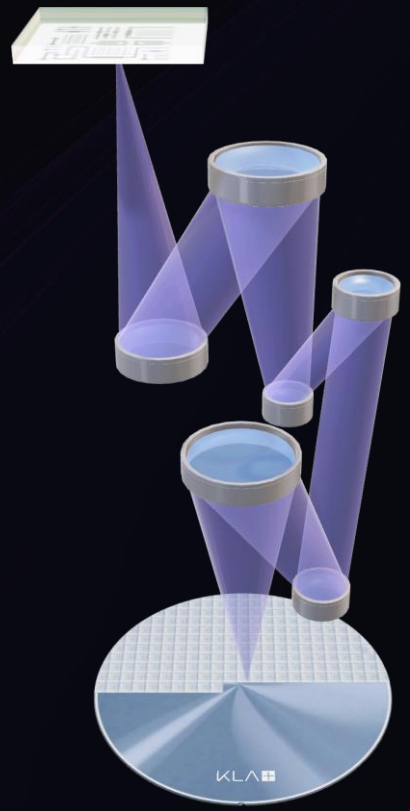

Memory Inflections

Memory Production Trends

More process control is required to mitigate rising variability and the increased severity of defects associated with:

- Smaller pattern features (EUV)
- DRAM chips with more logic content and less redundancy
- Larger chip sizes

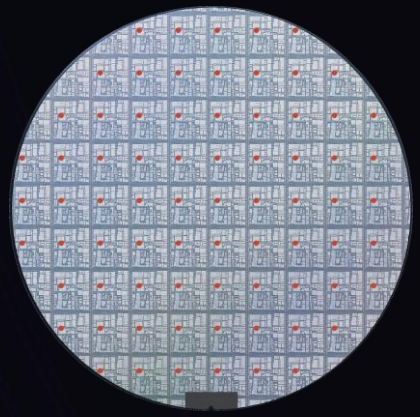

EUV Adoption: DRAM

EUV Reticle Requal

New Wafer Print Check Applications

DRAM and HBM Memory Chip Designs Drive High Yield and Reliability Requirements

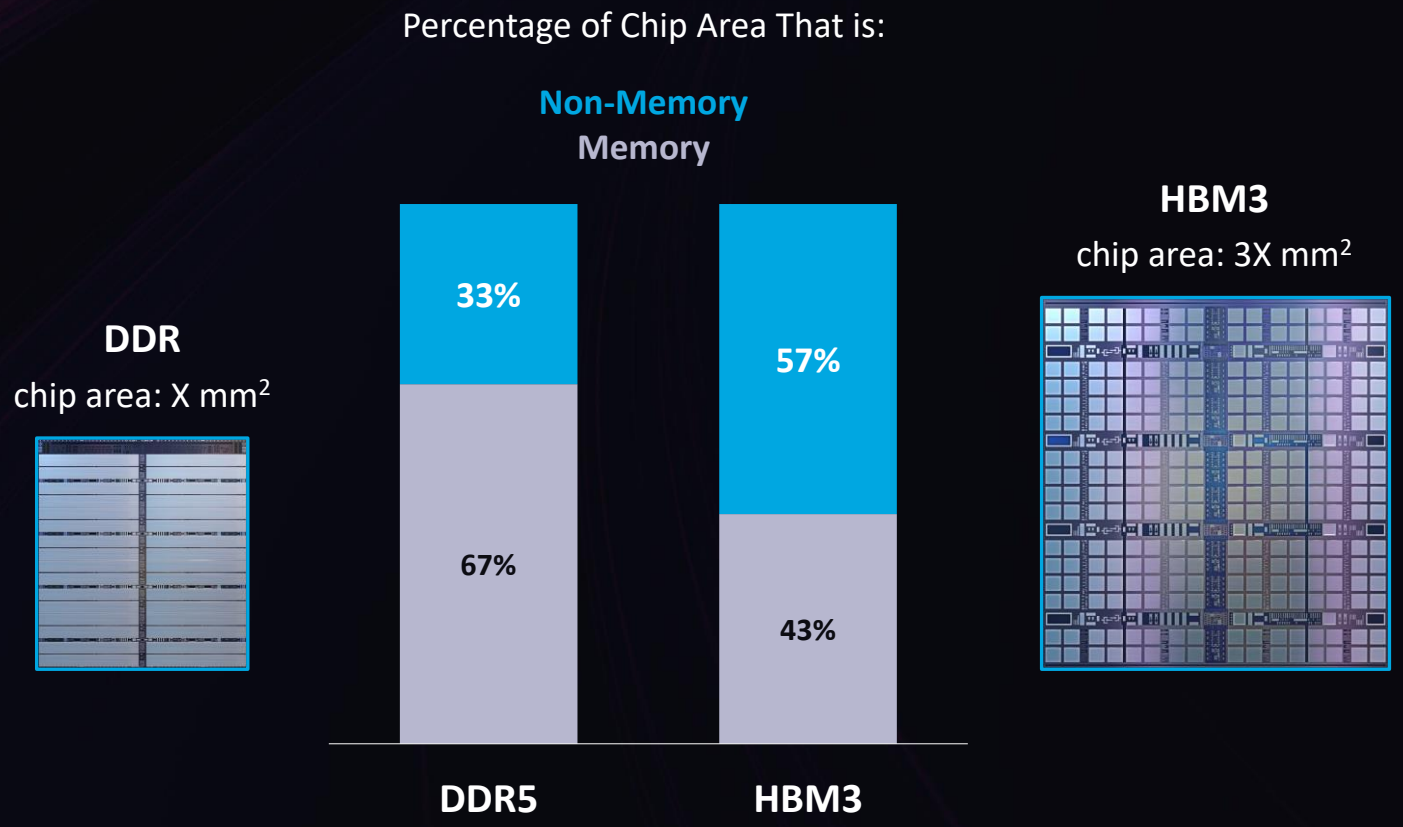

Memory Inflections

Memory Production Trends

More process control is required to mitigate rising variability and the increased severity of defects associated with:

- Smaller pattern features (EUV)
- DRAM chips with more logic content and less redundancy
- Larger chip sizes

Less Redundancy, Larger Chip Size: HBM

Sources: TechInsights

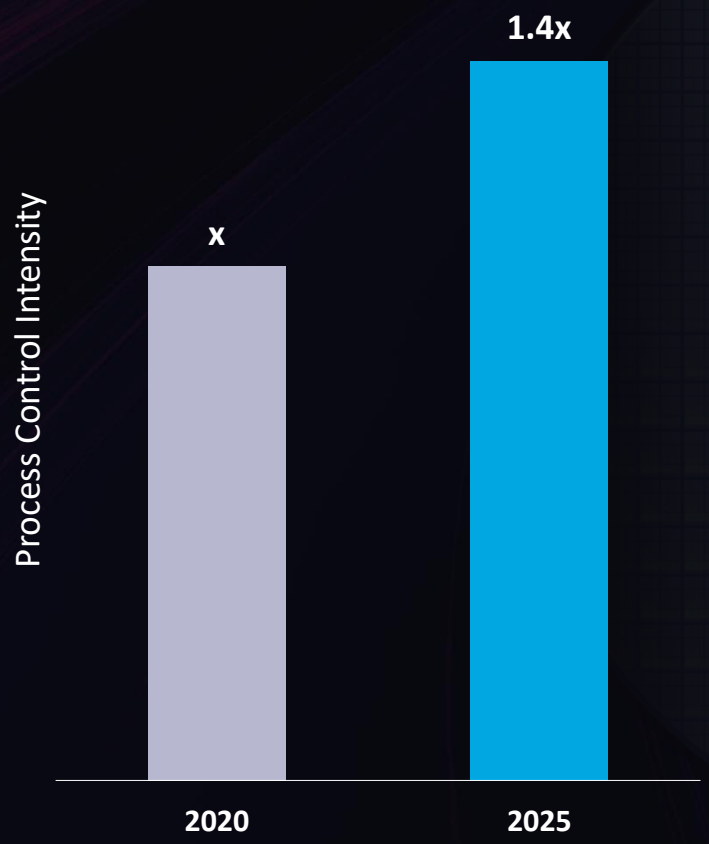

KLA's Products Deliver Solutions for Critical Memory Challenges

Collaboration

- BBP optical and e-beam inspection synergy enables fast production ramp
- New Gen4 and Gen5 BBP optical inspection platforms provide sensitivity to critical defects at optimal cost of ownership
- Multi-system reticle requalification strategy with reticle inspection and wafer print qualification reduces high-volume manufacturing yield risk
- Process control expertise leveraged to optimize high-volume manufacturing sampling strategies to address the yield risk associated with reduced pattern redundancy

Increasing DRAM Intensity

(% of Wafer Equipment)

$450M

KLA's Products Deliver Solutions for Leading-Edge High-Volume Manufacturing

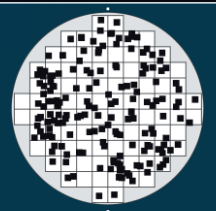

Deep Collaboration | Process Control Expertise | Portfolio

Process Steps

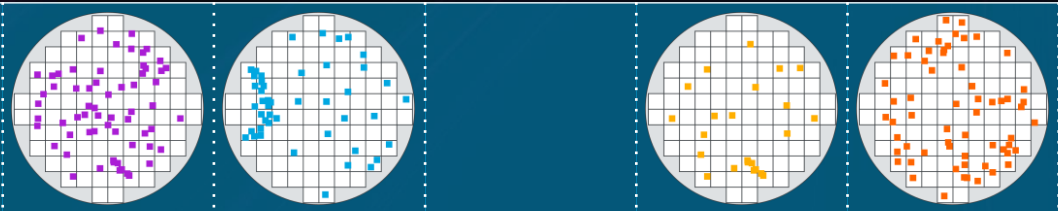

- One process loop shown
- Many process loops make up >1,000 process steps

1. Process Mapping

- Determine defectivity level in loop

2. Defect Source Analysis

- Determine the source of defectivity and variations

3. Process Control Optimization

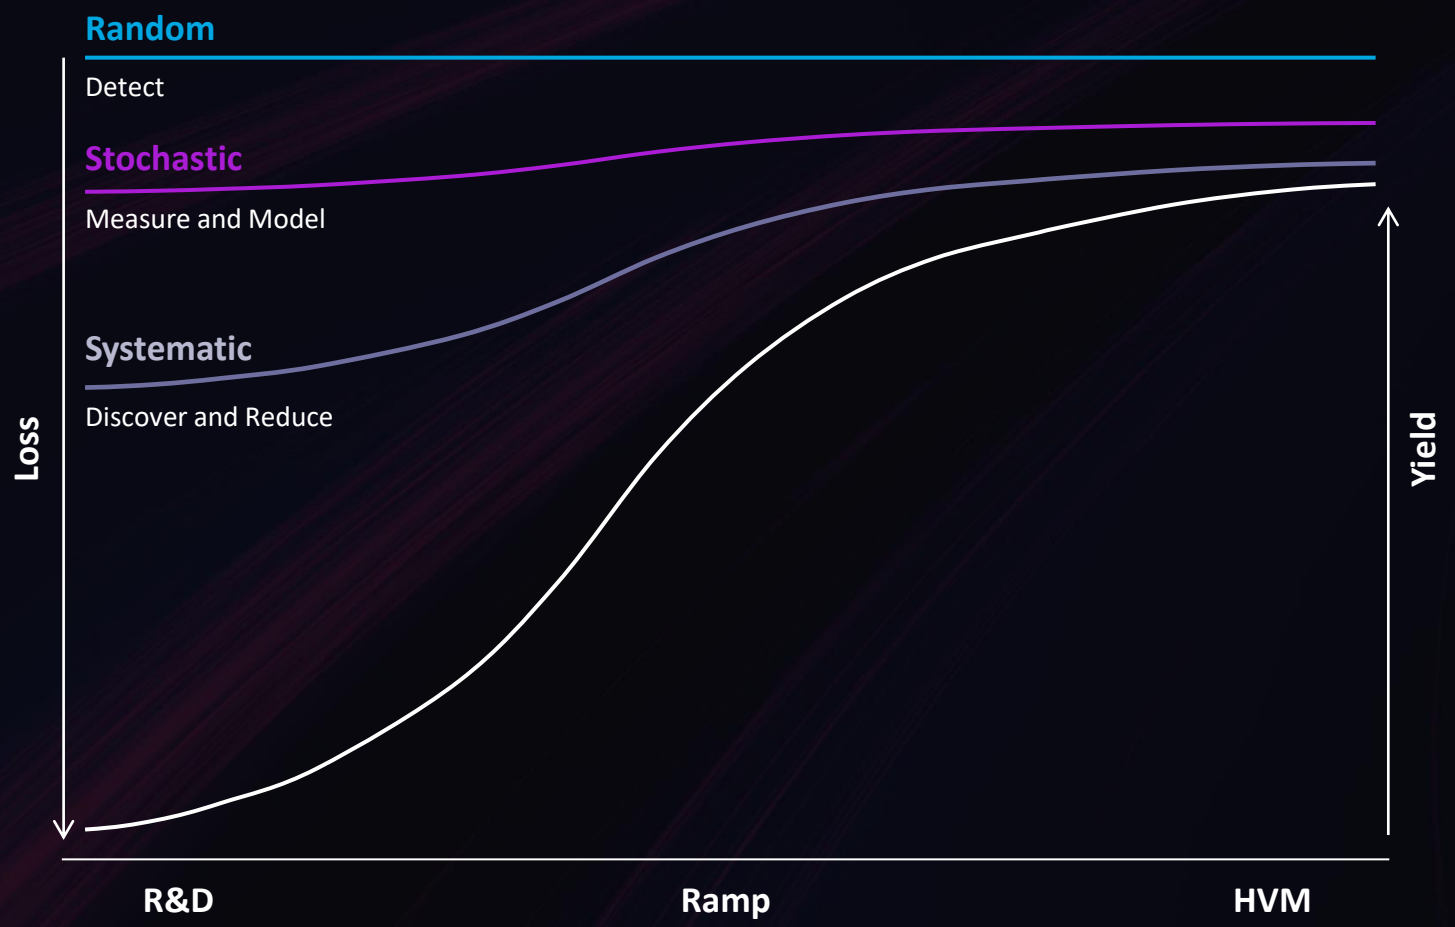

Chamber Monitoring

Inline Segmentation

Final Check

Process Control Improves the Productivity, Predictability and Profitability of a Fab Throughout the Manufacturing Lifecycle

Defect Types | Sources

Random: uncorrelated, non-predictable

- Process particles
- Equipment wear-out (bearings, seals, valves)
- Sporadic tool or material excursions

Stochastic: multi-parameter interactions, modellable

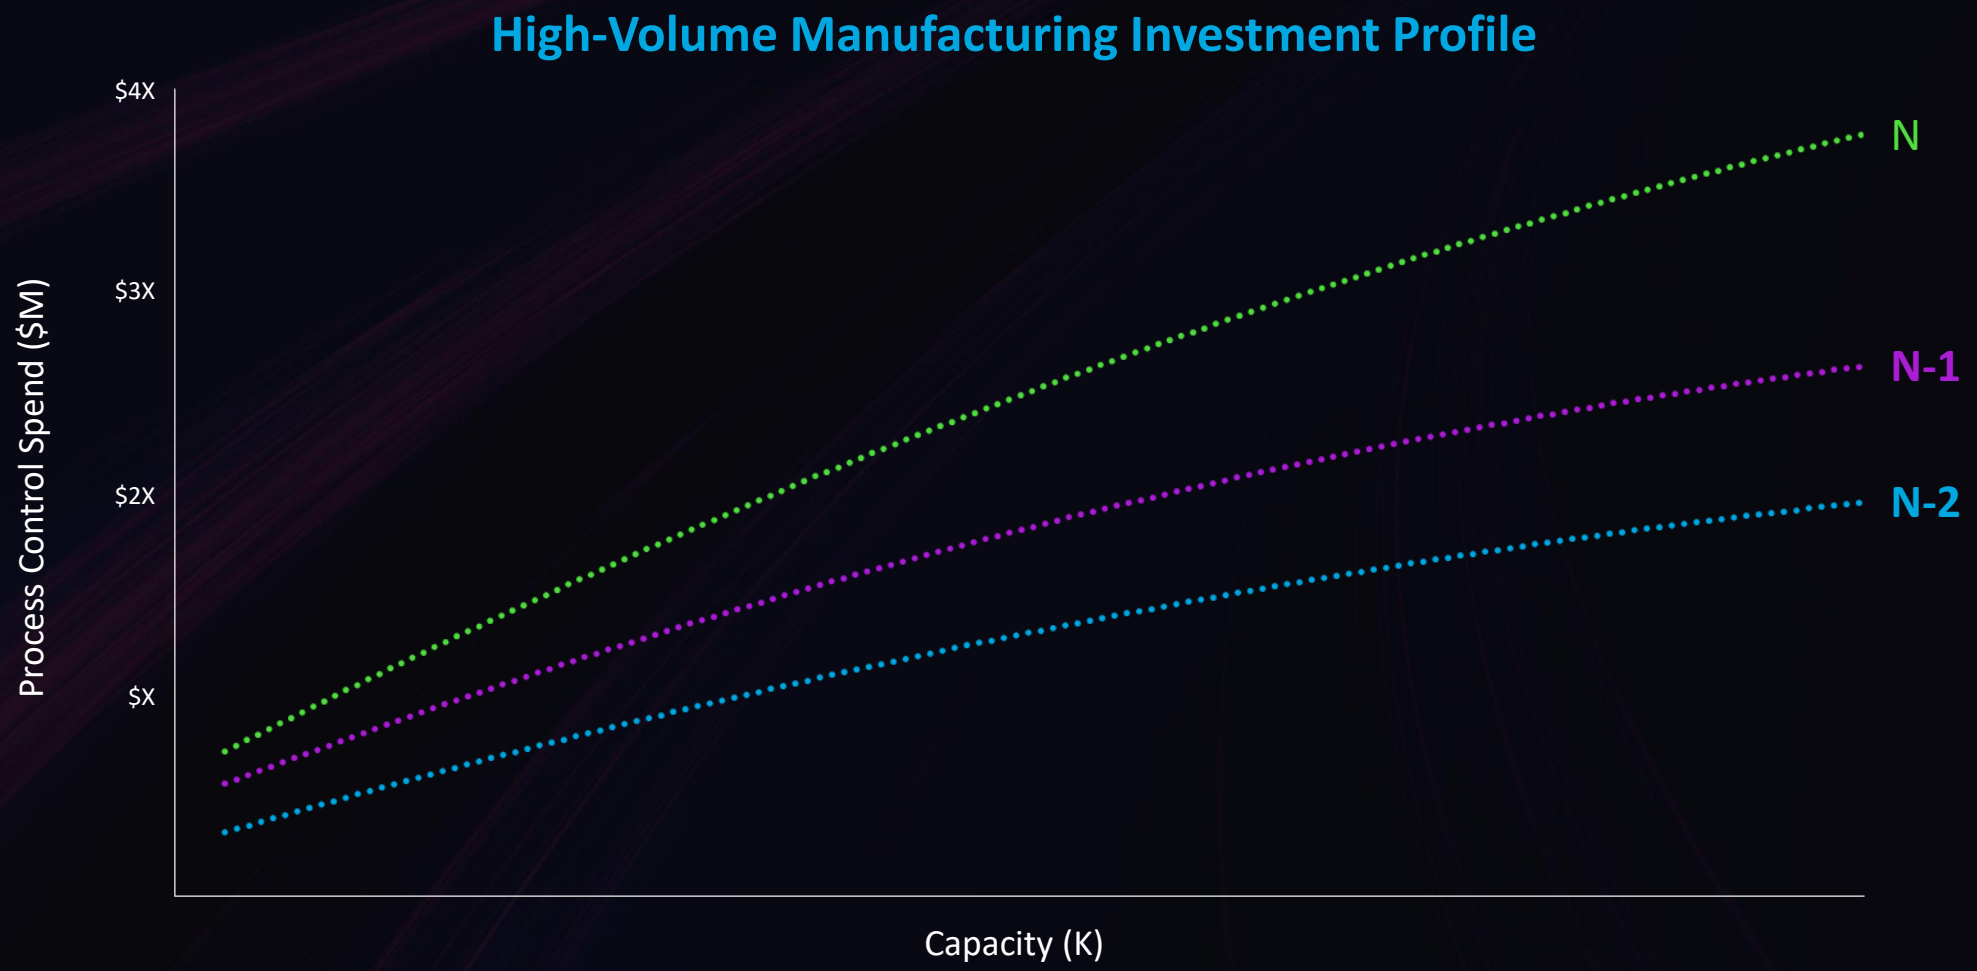

- Edge placement variability near design margins
- Pattern variability due to photon shot noise
- Etch bias and loading interacting with marginal CDs

Systematic: repeatable, spatially predictable

- Local layout effects (LLE/LDE)
- Etch, CMP and deposition non-uniformity signatures
- New product intro exposing latent margin weaknesses

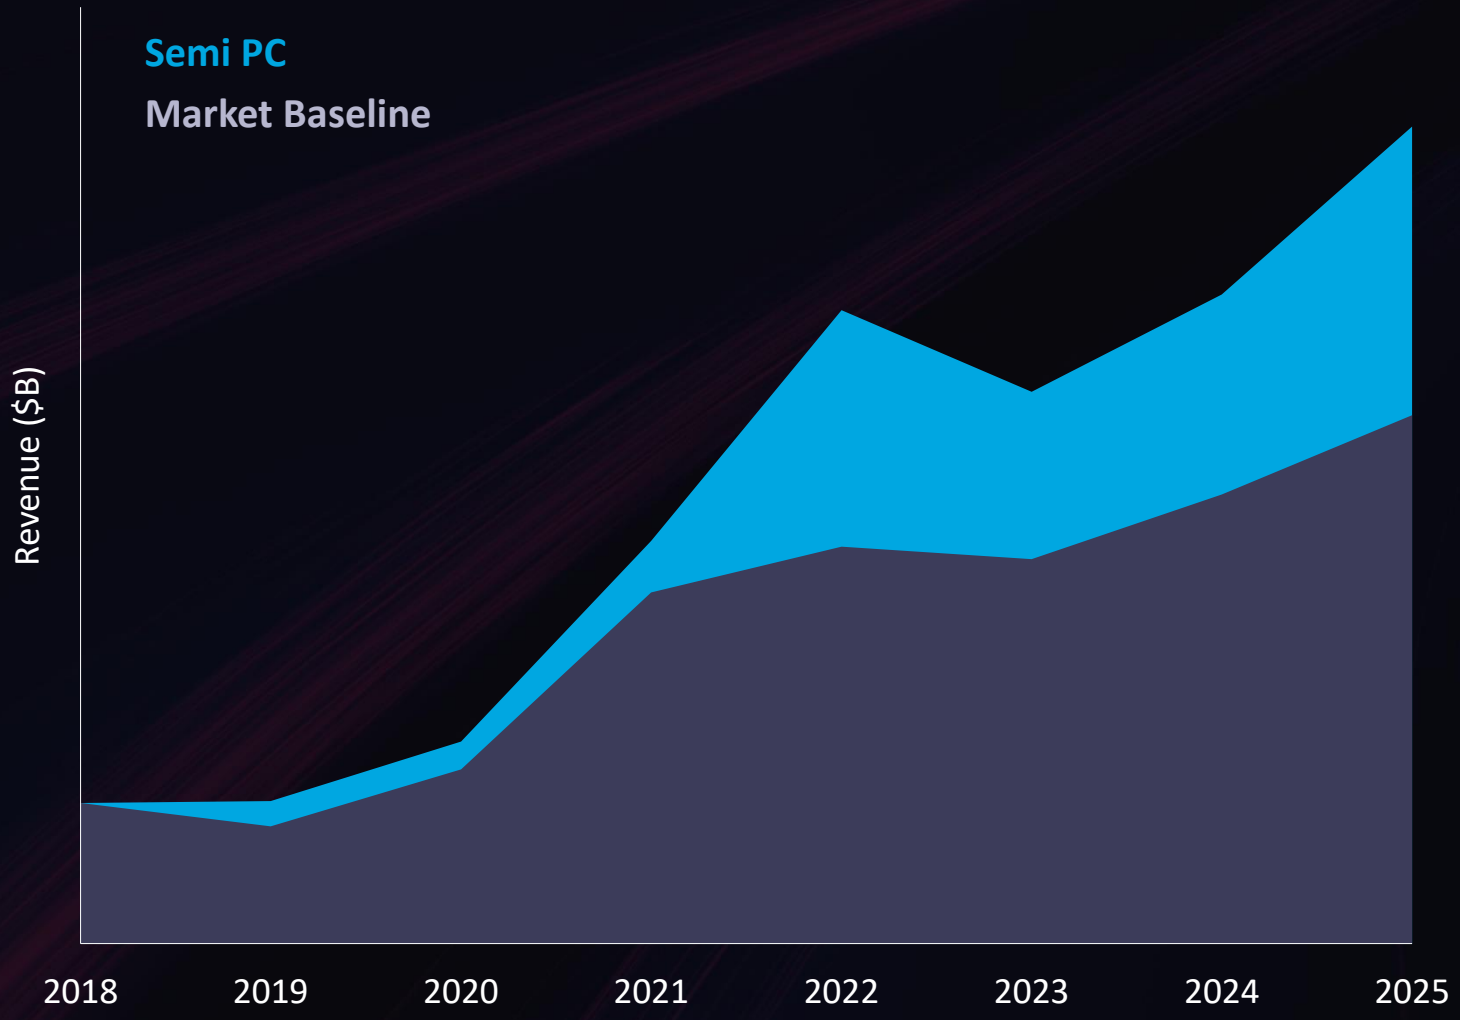

KLA's Products Deliver Solutions for High-Volume Manufacturing

Process Control Spend Grows with Capacity at Smaller Design Nodes

KLA's Core Technologies and Expertise

Optical Inspection Architecture

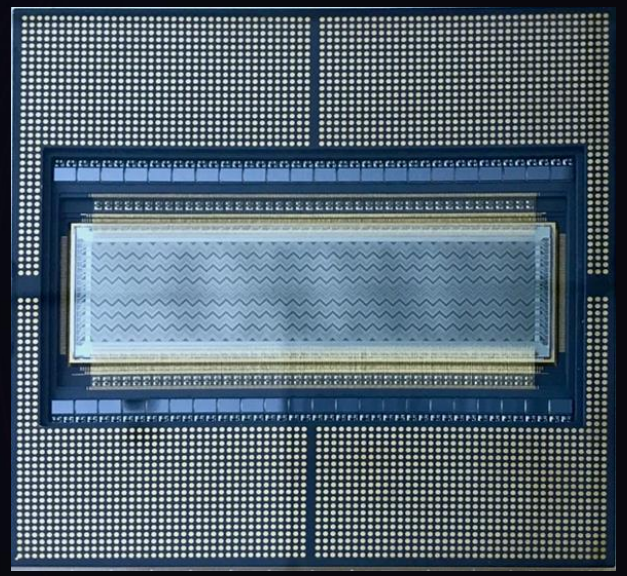

- light
- optics
- sensors
- pixels
- algorithms
- k factors

Gen5 BBP Optical Inspection Unique Technologies

Light

DUV broadband source that is >2x the brightness of the surface of the sun

Optics

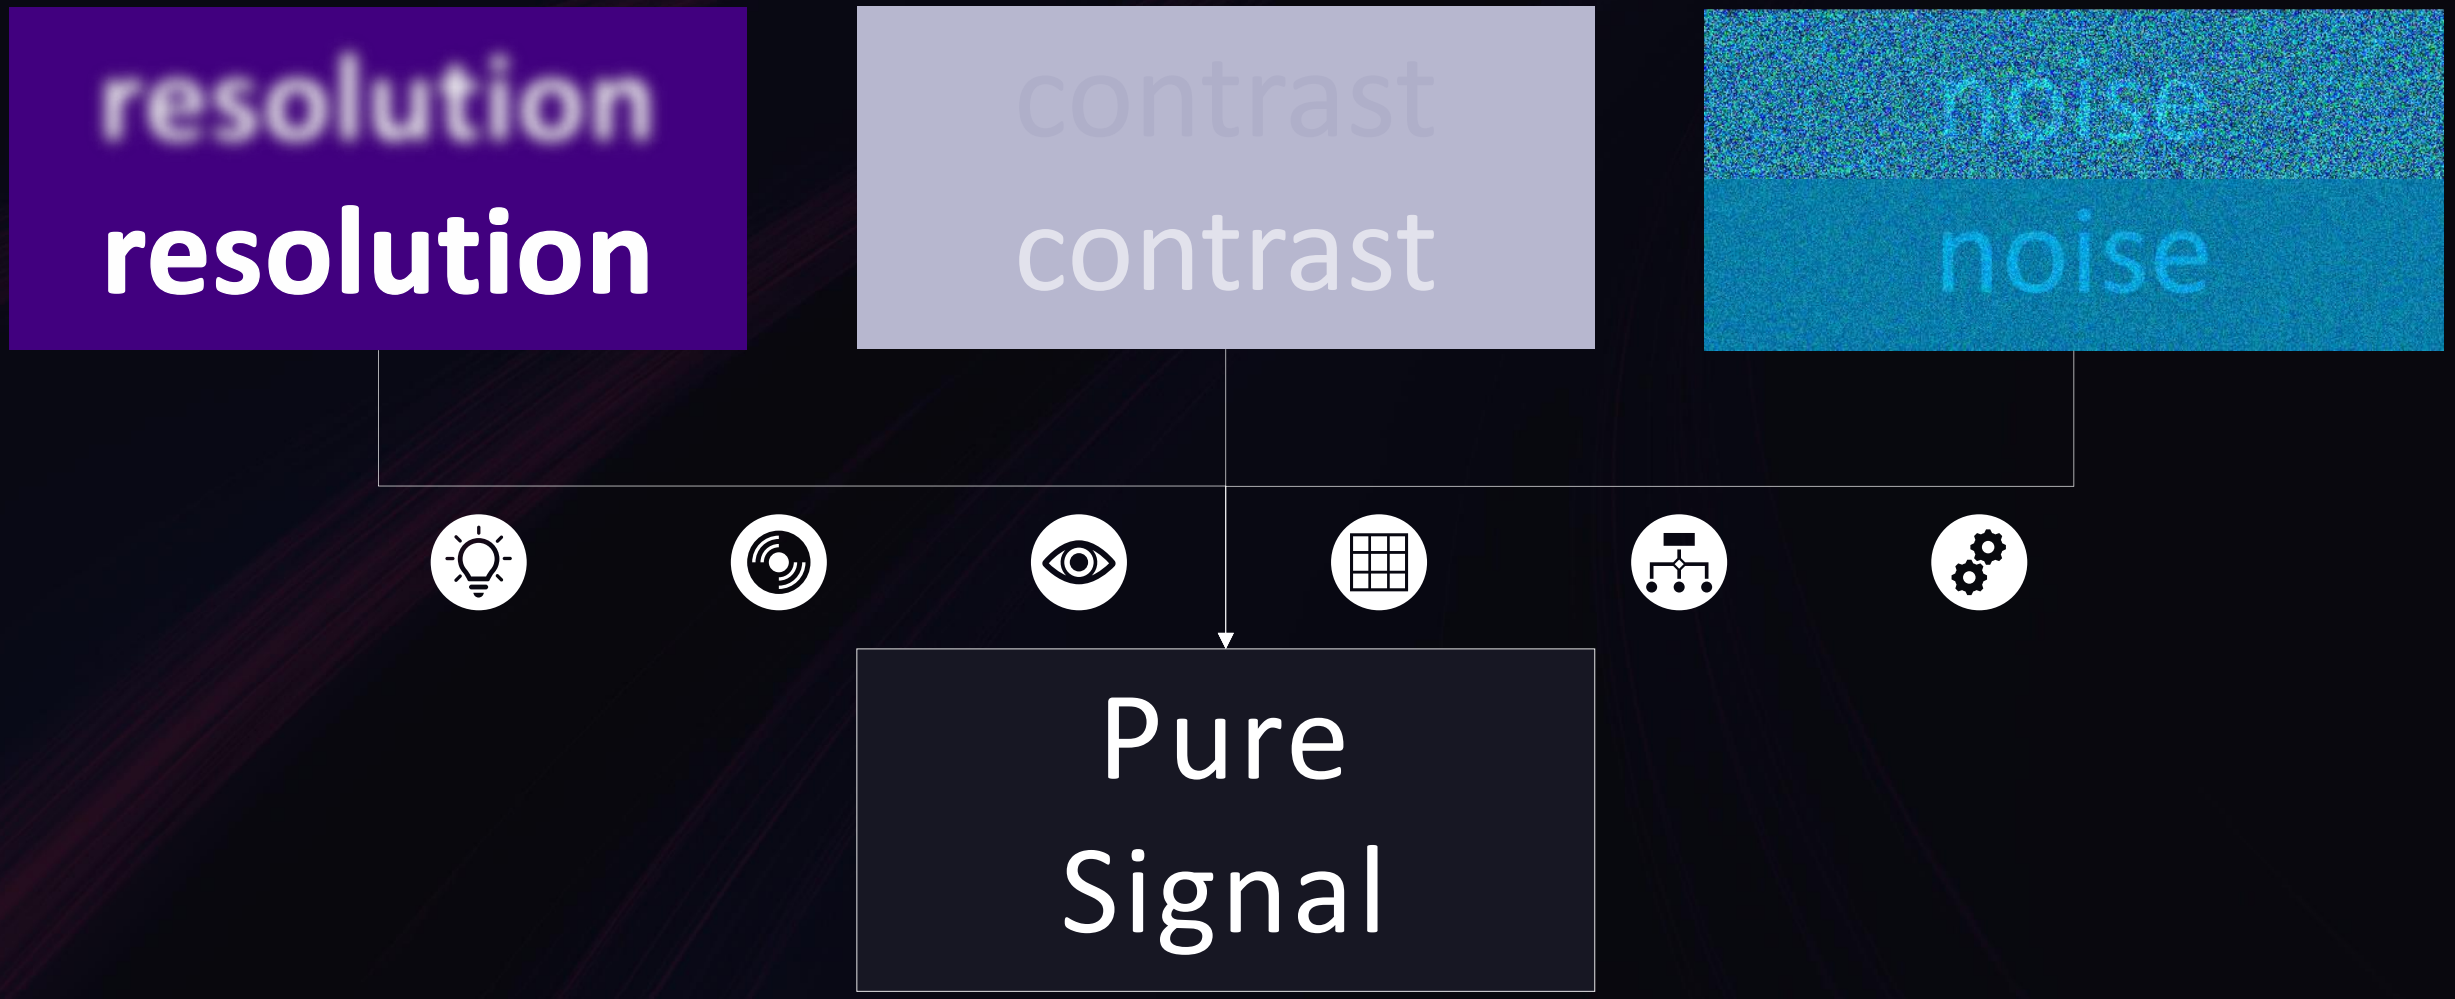

300kg catadioptric objective with CaF_2 crystal

Sensor

Massively parallel data collection equivalent to >2,000 smartphones simultaneously taking a photo **every second**

Best-in-Class Signal Required to Find Nanoscale Defects / Variations

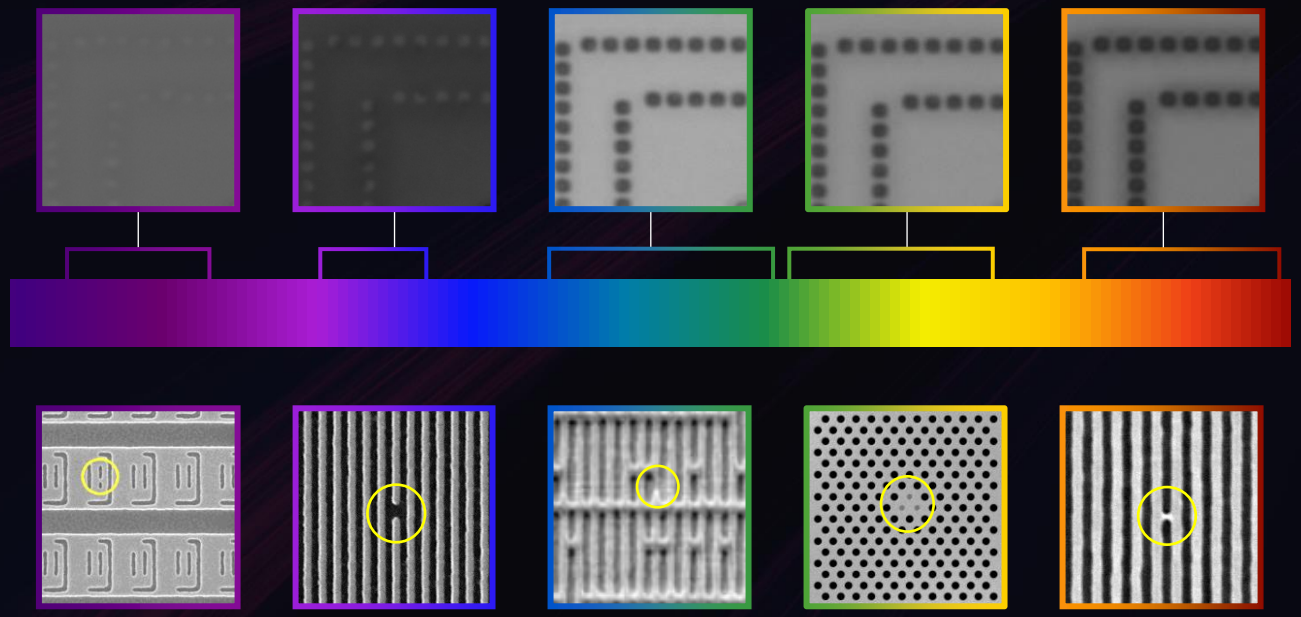

Advancements in Core Technologies Improve Resolution and Contrast, and Reduce Noise

Broadband Optical Inspection Delivers Unique Value

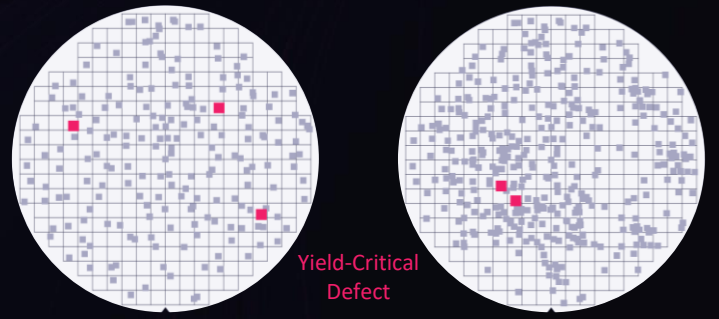

Sensitivity

Gen4 and Gen5 provide the widest wavelength range to find all defect types and sizes

Coverage

Full wafer inspection is critically important as defects can occur anywhere

Yield-impacting defects can occur anywhere on the wafer

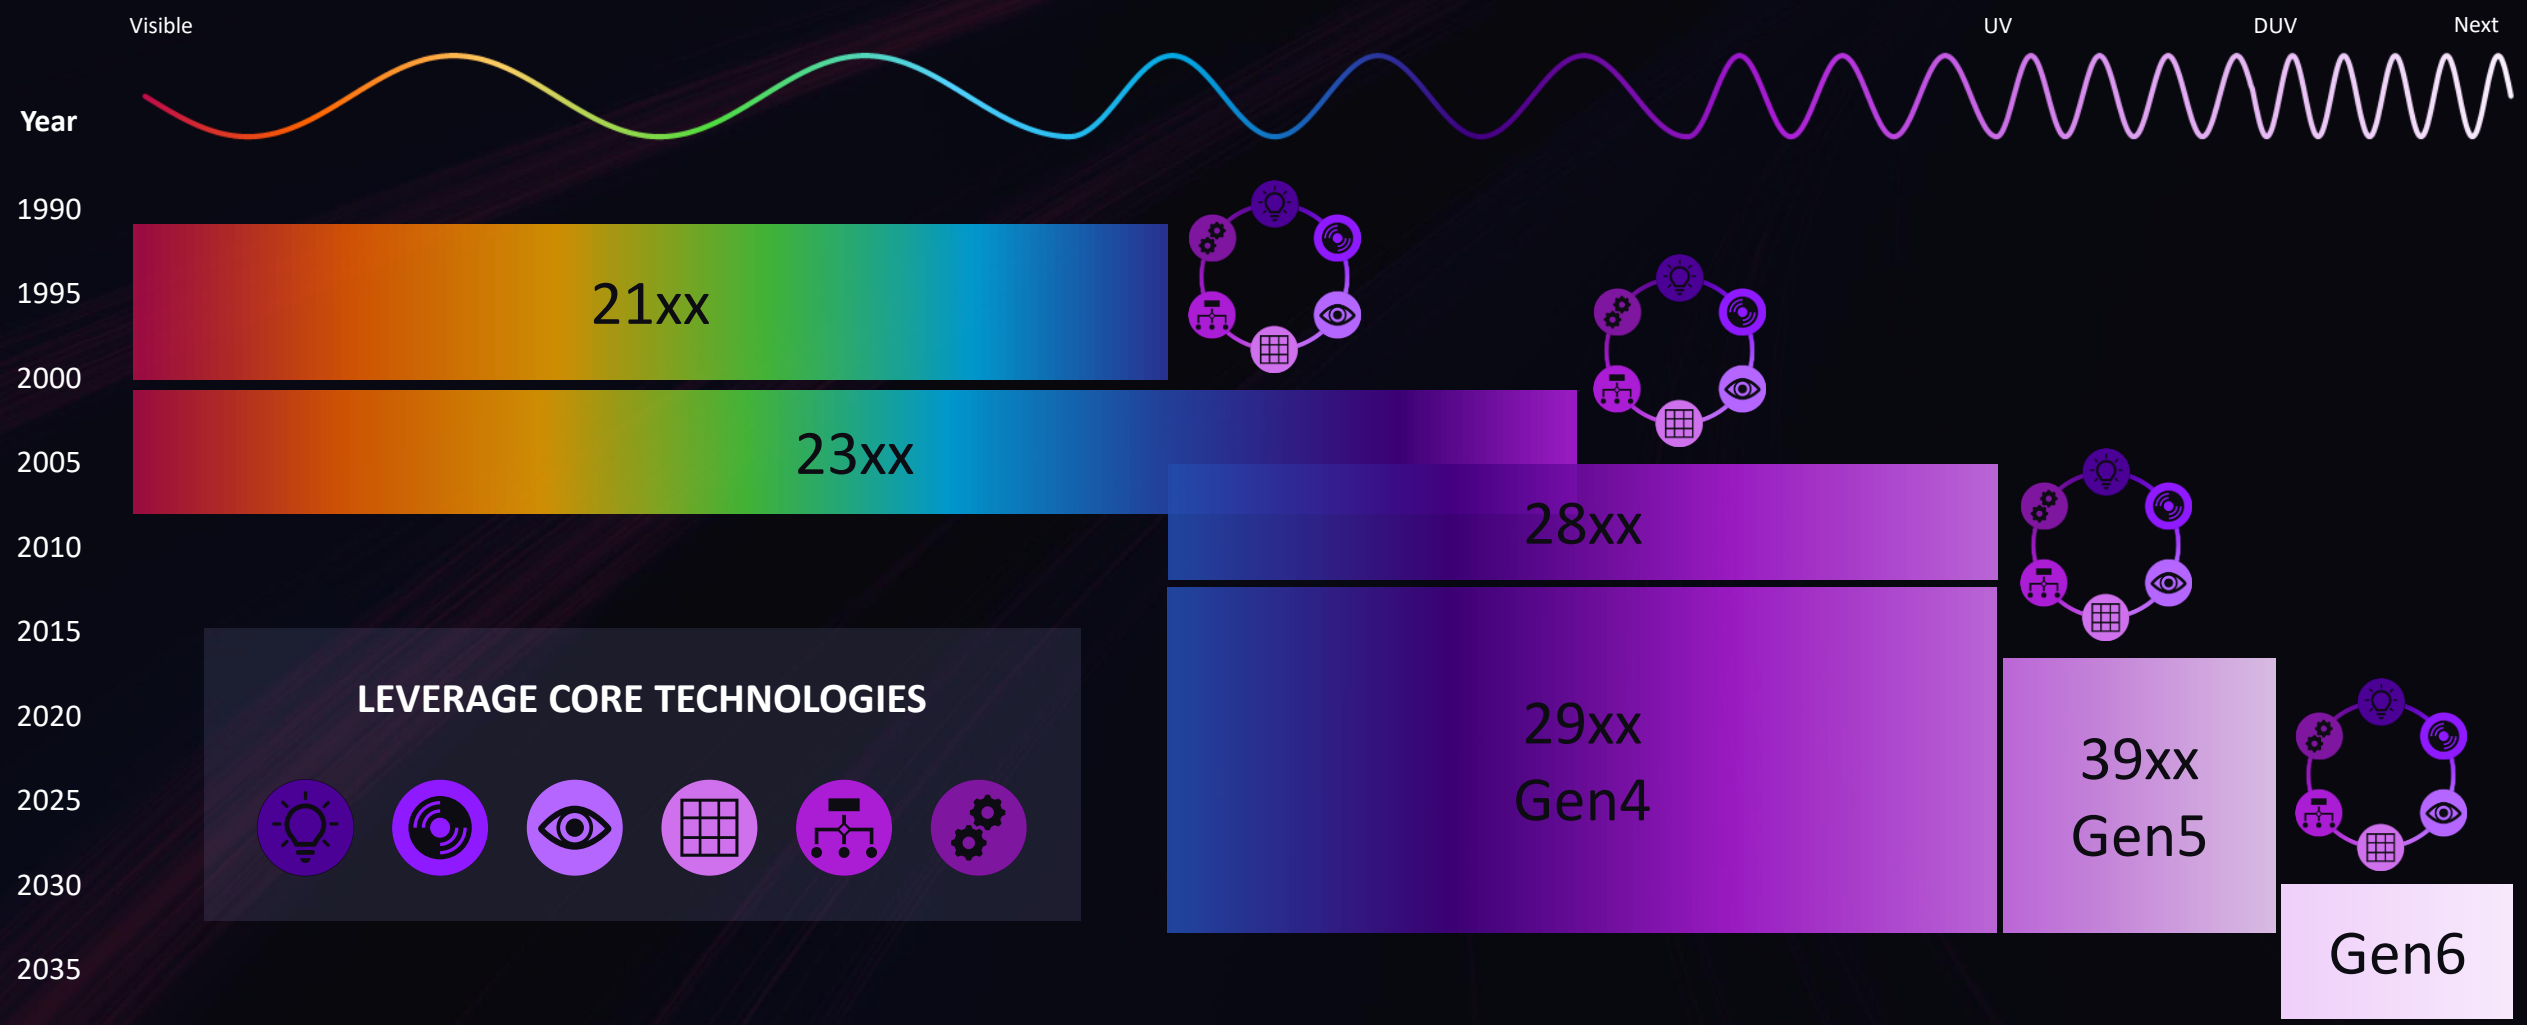

Wafer-level signatures help identify the source of defects

Broadband Platform Finds Critical Defects with Full Wafer Coverage Enabling Customer Success in R&D and HVM

Note: Defect image sources are SEMICON West 2021, SPIE 104510L, SPIE 1080909 and SPIE 115170U

Framework for Extending System Performance

Fast, Accurate Processing of Data Required for Wafer Coverage

An optical inspector collects

78 trillion pixels

contained in

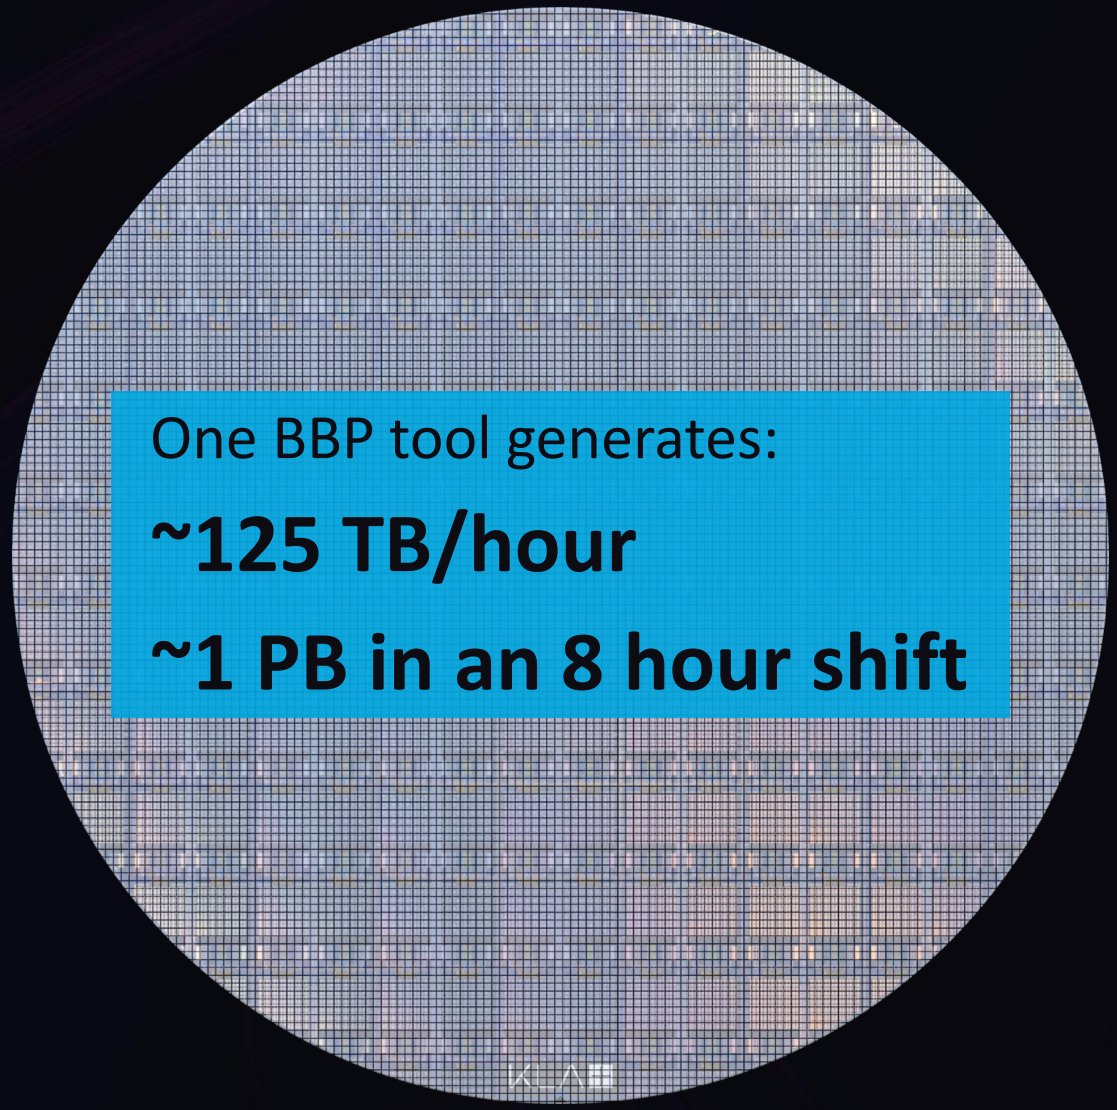

65 million frames per wafer

using

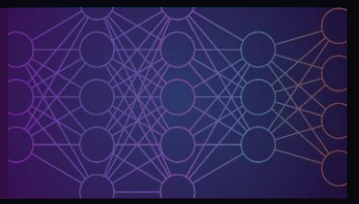

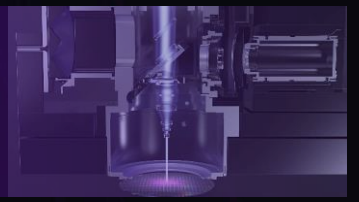

40 GPPS image sensors

and

60 GB/s GPU-based image computers running AI-based algorithms

AI at KLA: Five Layers Form a Differentiated Solution

5	**Applications**	Workflows for fab-wide process control	
4	**AI Models**	Models trained in optics, design and context	
3	**Software**	Infrastructure to manage high-volume, high data rate information in a production environment	
2	**High-Performance Compute**	GPU and CPU compute architecture that optimizes system performance and CoO	
1	**Physical Subsystems**	Light source, optics, sensor, etc. that produces pure signal	

KLA's AI Stack: Layer 2

High-Performance Compute with CPU/GPU Infrastructure Optimizes System Performance and Cost

Big Data Infrastructure

Improved Inspection Sensitivity is Achieved through Smaller Pixels, Enabling Detection of Smaller Defects

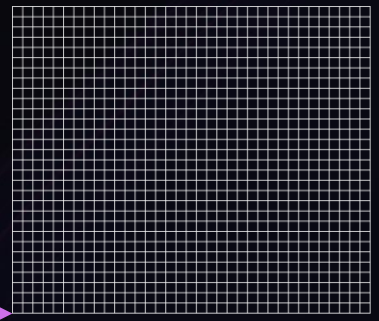

Large Pixel

BBP Optical Inspection Technologies that Enable Smaller Pixel:

- Advanced Optics / Objective
- Unique Broadband Light Source
- High-Performance Sensor
- Fine Precision Stage

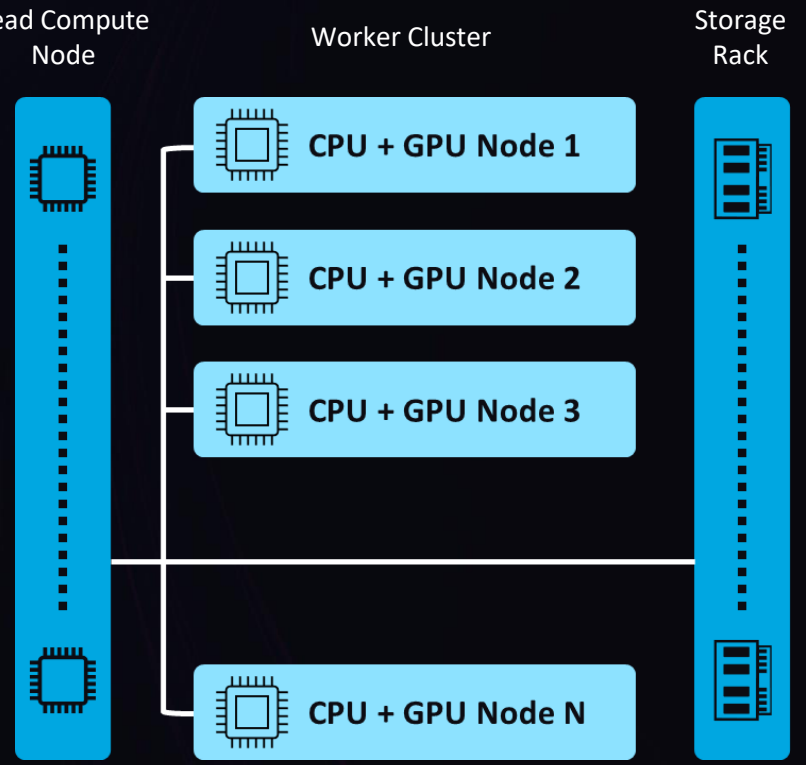

30nm Pixel

- Low cost of ownership system
- Under-sampled events

- ~78 trillion pixels per wafer
- Sub-pixel alignment
- **Requires high-performance, high data rate compute**

High-Performance Compute Architecture

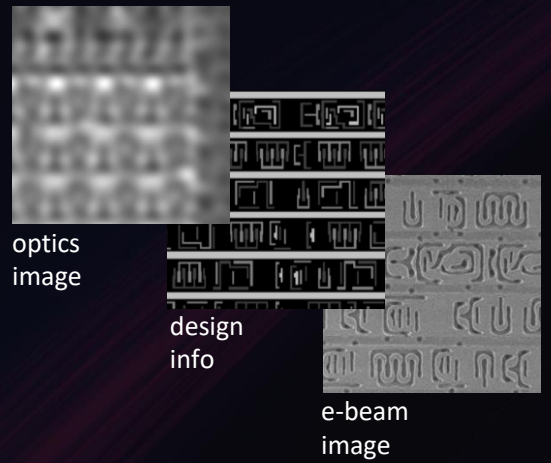

- GPU-based scalable compute
- Higher data rate

KLA's AI Stack: Layer 4

Models Trained in Optics, Design and Context

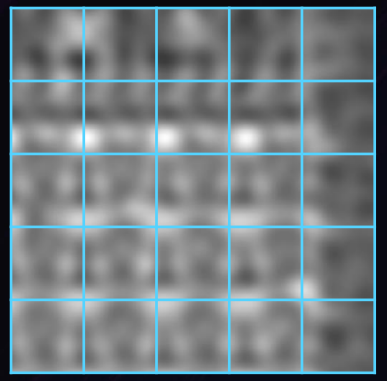

Optics | Design Info

- Sub-pixel aligned optics
- Design and e-beam images used as ground truth for defects of interest

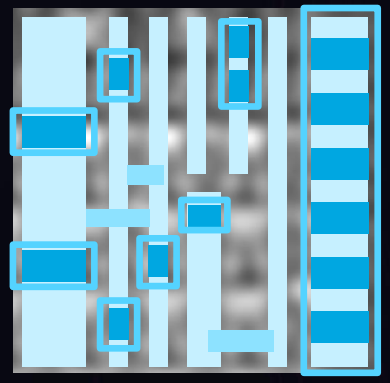

Pixel-Level Learning

- Learn features at every pixel

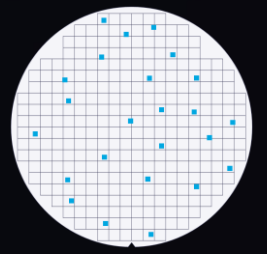

Context Mapping

- Learned segmentation from design

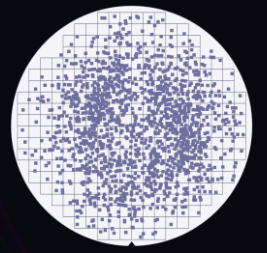

DL-Based Detection

- Enhanced defect capture and nuisance separation

With DL

- High capture of critical defects
- Nuisance suppressed

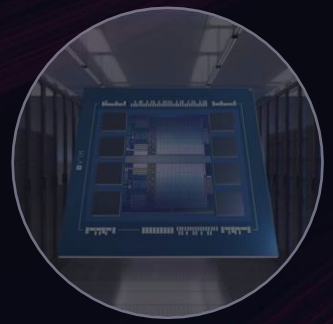

Without DL

- Low capture of critical defects
- Nuisance events dominate results

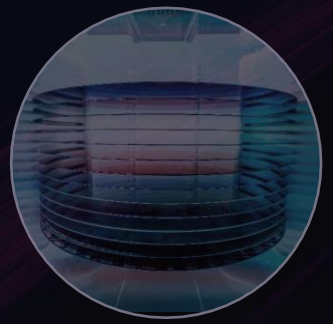

The KLA Operating Model Drives Semi PC Success

Execution

2030 Target Model

Reticle Quality is Critical; Inspection Challenges are Many

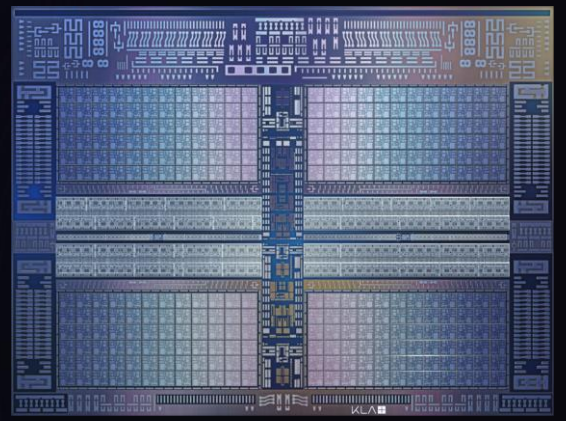

100% Capture of Defects is Required

Reticle defect

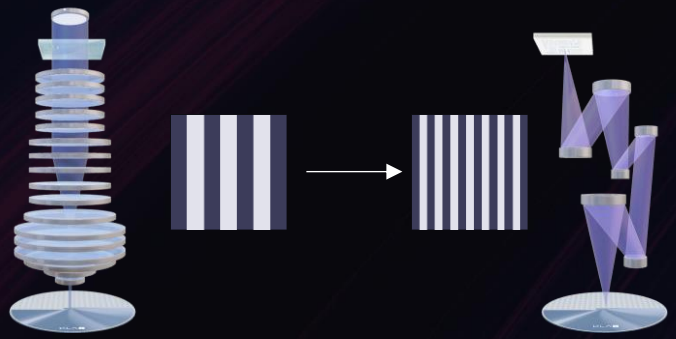

Repeater defect in every chip on the wafer: catastrophic to yield

Large Chip Size

Unique reference needed for inspection

EUV Prints Smaller Patterns, Smaller Defects

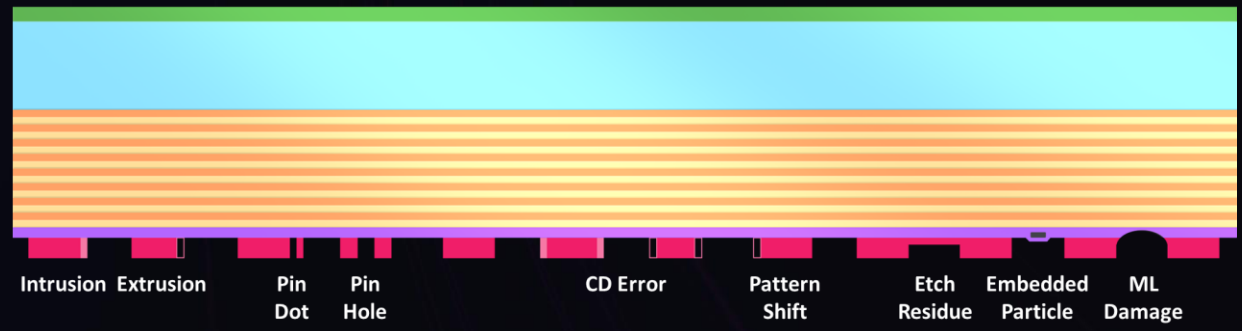

193nm Scanner

EUV Scanner

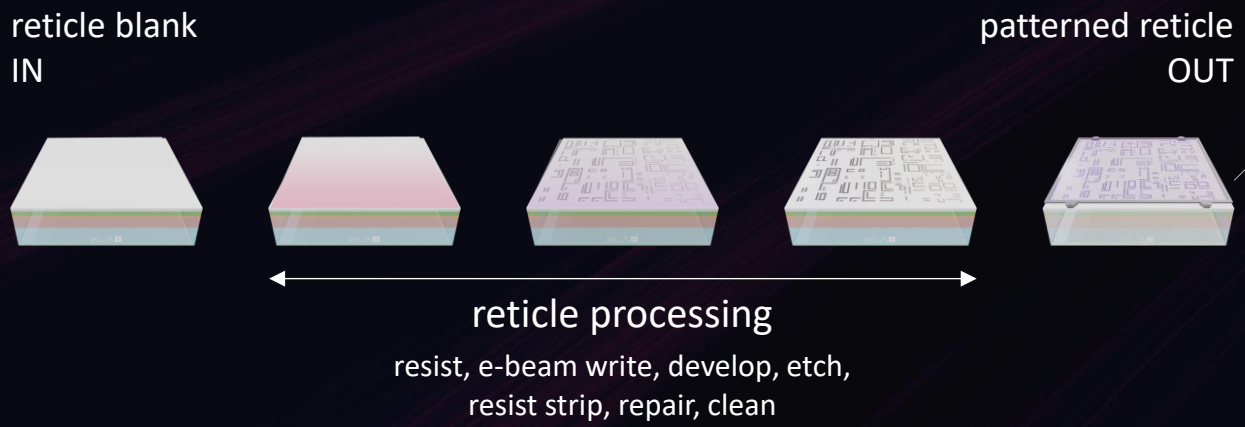

Improved inspection sensitivity required to detect smaller defects

Many Different Defect Types

Reticle Quality is Critical in Both the Mask Shop and IC Fab

Mask Shop – where reticles are made

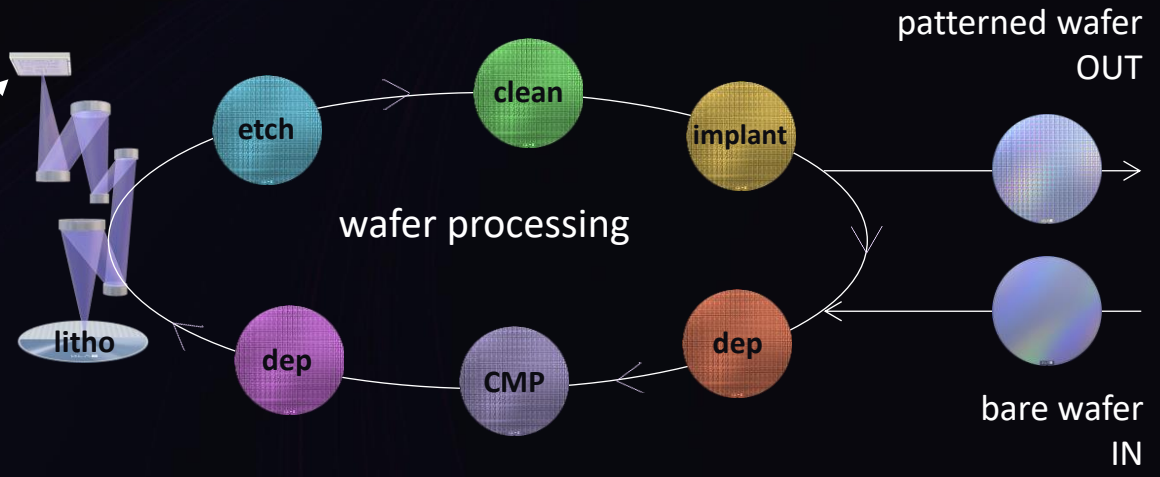

Defects

- Pattern and particles

Role of Reticle Inspection

- Reticle process qualification and monitoring
- Reticle outgoing qualification to reduce yield risk in IC fab

IC Fab – where reticles are used to make chips

Defects

- Particles that print

Role of Reticle Inspection | Print Check

- Reticle re-qual to reduce yield risk
- Reticle print verification for detection of repeater and stochastic defects

Number and Mix of Reticles Used in Chip Production Drive the Need for a Reticle Portfolio Inspection Strategy

Number of Reticles

=

Number of Designs

X

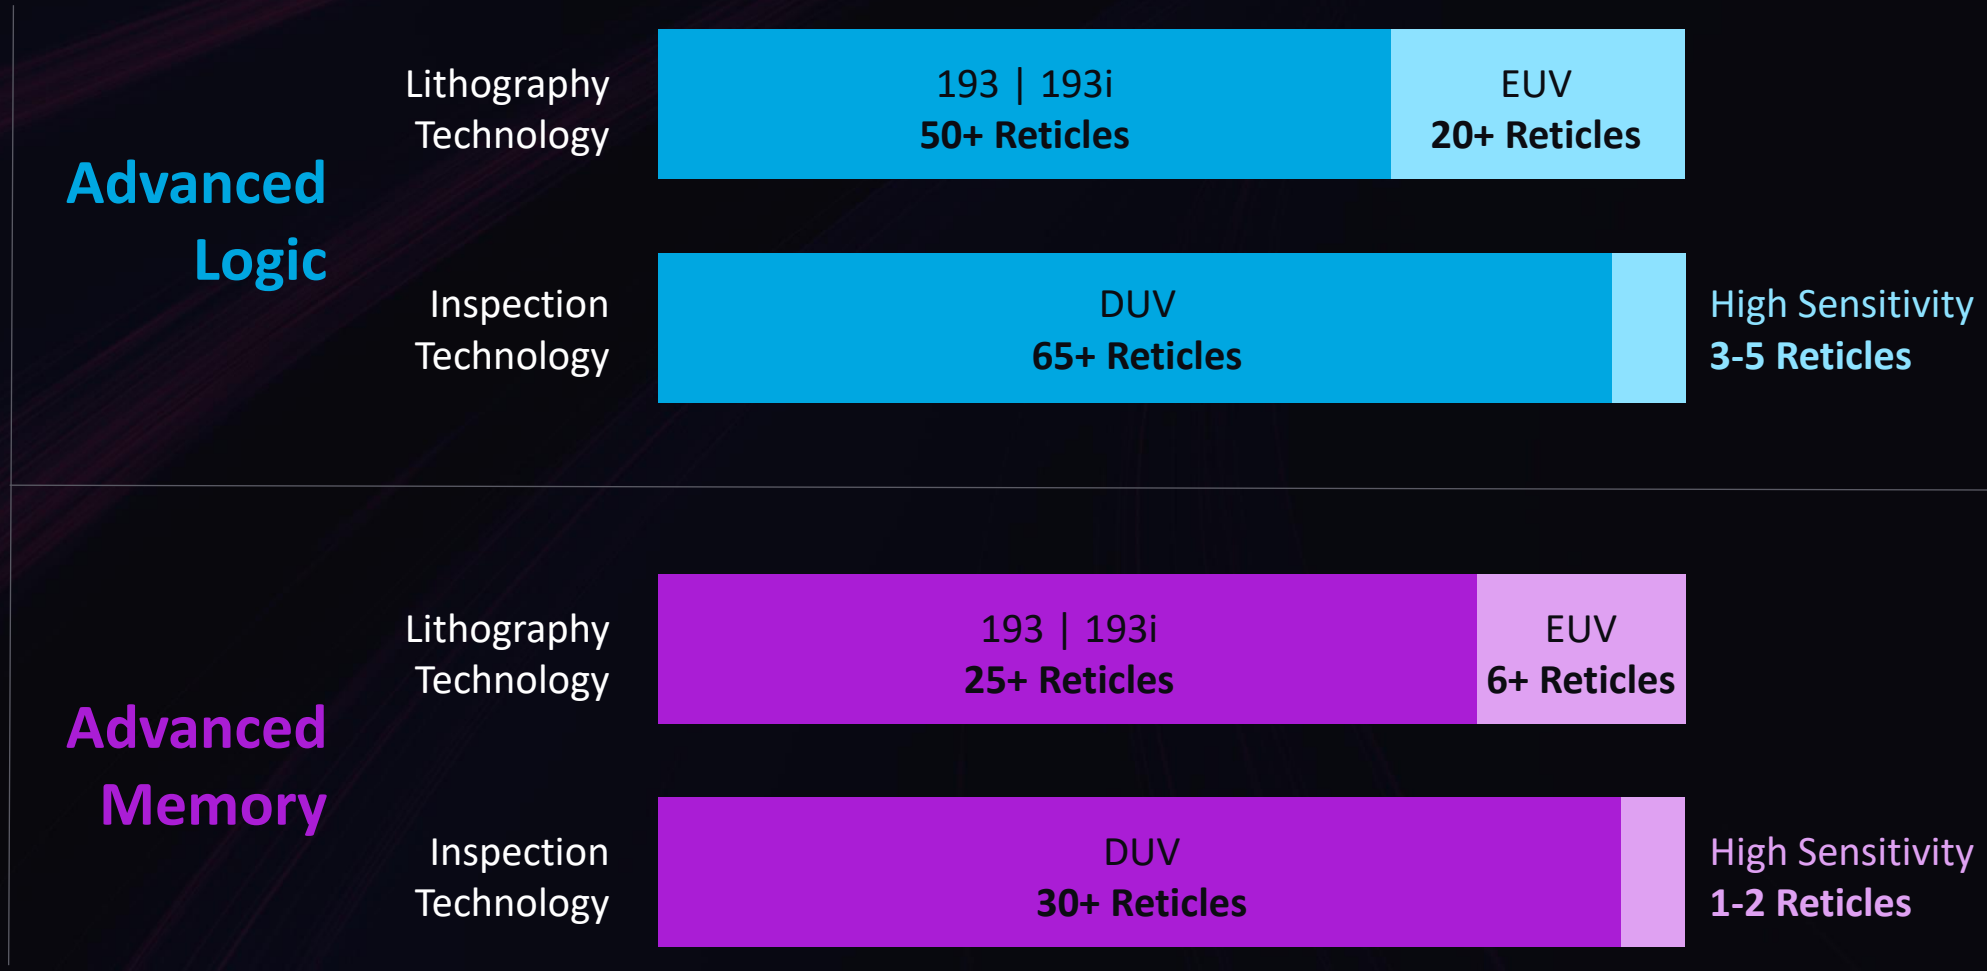

Number of Lithography Layers

X

Re-Spins

KLA

Growing a Durable Revenue Stream Through a Best-In-Class Service Business

Brian Lorig, EVP, Global Services

March 12, 2026

Key Messages

1. Enabling **customer success** with deep partnerships and service excellence aligned with customer outcomes

2. Depth of KLA data and rigorous **KLA Operating Model** improves **customer experience**, drives **productivity** and enables AI-powered application development

3. Industry-leading service model with **>80%** of revenue (up from >75% in CY22) coming from multi-year, subscription service contracts; increasing CAGR from 12-14% to **13-15% CAGR**

KLA Services Supports Customers with Global Infrastructure

Providing Critical Expertise and Parts to Maximize the Value of Customers' KLA Tools

>57,000

Tools in the installed base

>4,000

Customer facilities

>250,000

Annual service calls

>3,500

Service engineers

>260,000

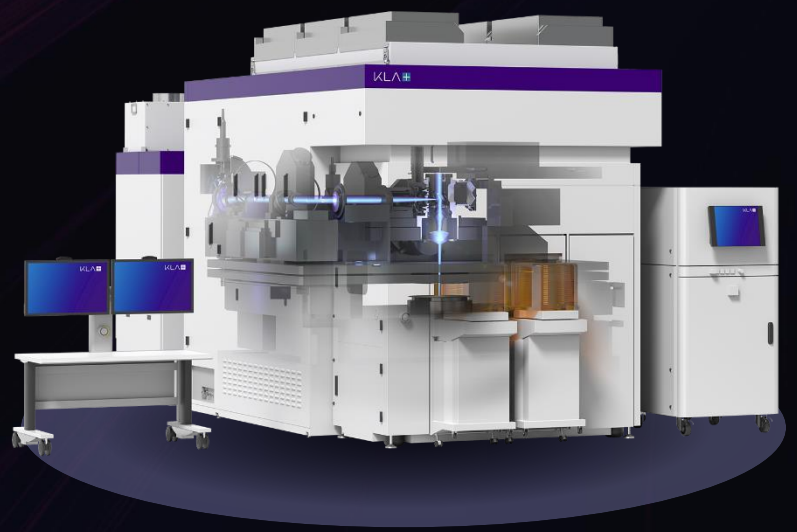

Unique assemblies & spare parts

Comprehensive Service Contracts Extend Tool Life and Reduce Overall Cost of Ownership

KLA Portfolio: High Mix, High Complexity, Lower Redundancy, Long Life

Broadband Plasma (BBP) tool family

~30	different product models
~150	tool model configurations
~1,200	unique parts and sub assemblies
~25,000	different specifications

KLA Portfolio: Process Control Requires Different Service

High Complexity and Low Redundancy, Critical to Yield, Low Consumables

	Process Control	Process
Installed Base	Low Redundancy	High Redundancy
Tool Utilization	~Stable	~Variable
Part Content	Proprietary	Commodity
Labor Content	Diverse	Repetitive

Yield Improvement Always has a High ROI

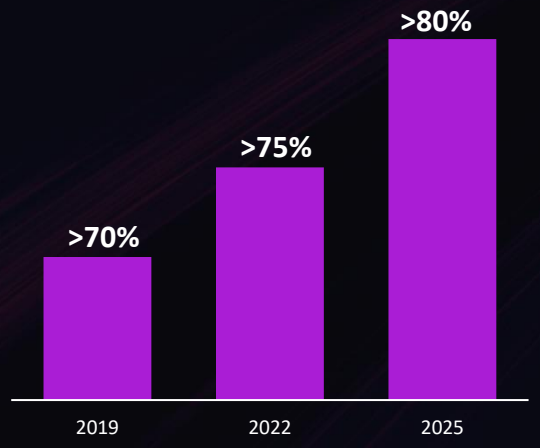

Strong Track Record of Services Execution

Tool Lifetime

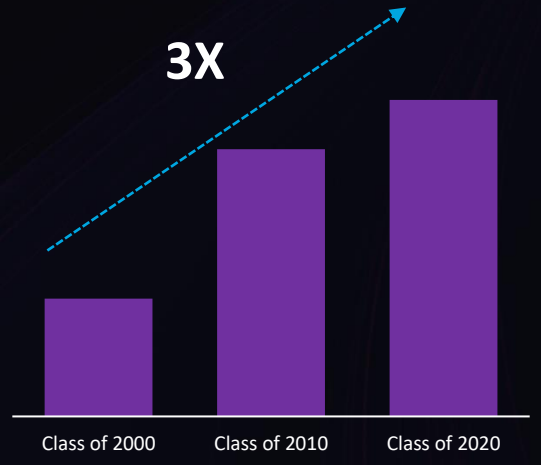

- Median time to retirement of tools in installed base continues to extend
- Higher customer ROI

Attach Rate

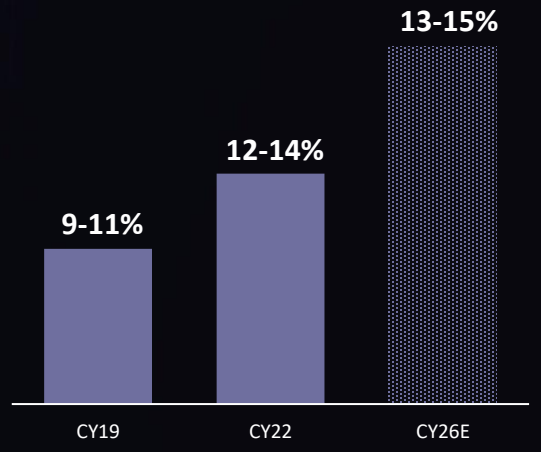

- Market inflections require higher availability at higher performance
- Higher tool complexity and process control intensity drive contract adoption

Service Revenue Per Tool

- Features and enhancements: software, diagnostics, calibrations
- New value-added services for improved outcomes

Projected CAGR

- Increasing tool complexity, customer demand and installed base growth drives service revenue
  - 2026 Investor Day: **13-15%**
  - 2022 Investor Day: **12-14%**
  - 2019 Investor Day: **9-11%**

Consistent Delivery of Service Value Results in 16 Years of Consecutive Growth

Our Customer Challenges are Increasing

Yield Ramp and Optimization

Geographic Expansion

Device Complexity

Skilled Talent Demands

Unplanned Downtime

Fab Efficiency and Asset Lifetime Extension

The KLA Operating Model is Foundational to Services Value

COLLABORATE

- Fab lifecycle and optimization portfolio: development, ramp and global expansion
- Services designed to reduce variability and maximize asset return
- Modernize and extend long-lived installed base

Services Value is Recognized by Customers

Support network for greater availability @ performance

Services infrastructure investment to support new fabs long before opening

Hundreds of global recognitions, annually

- “Best Strategic Supplier"
- "Best Supplier of 2025"
- “Proactive Cooperation and Support"
- “Group Excellence & Outstanding Team Contribution”

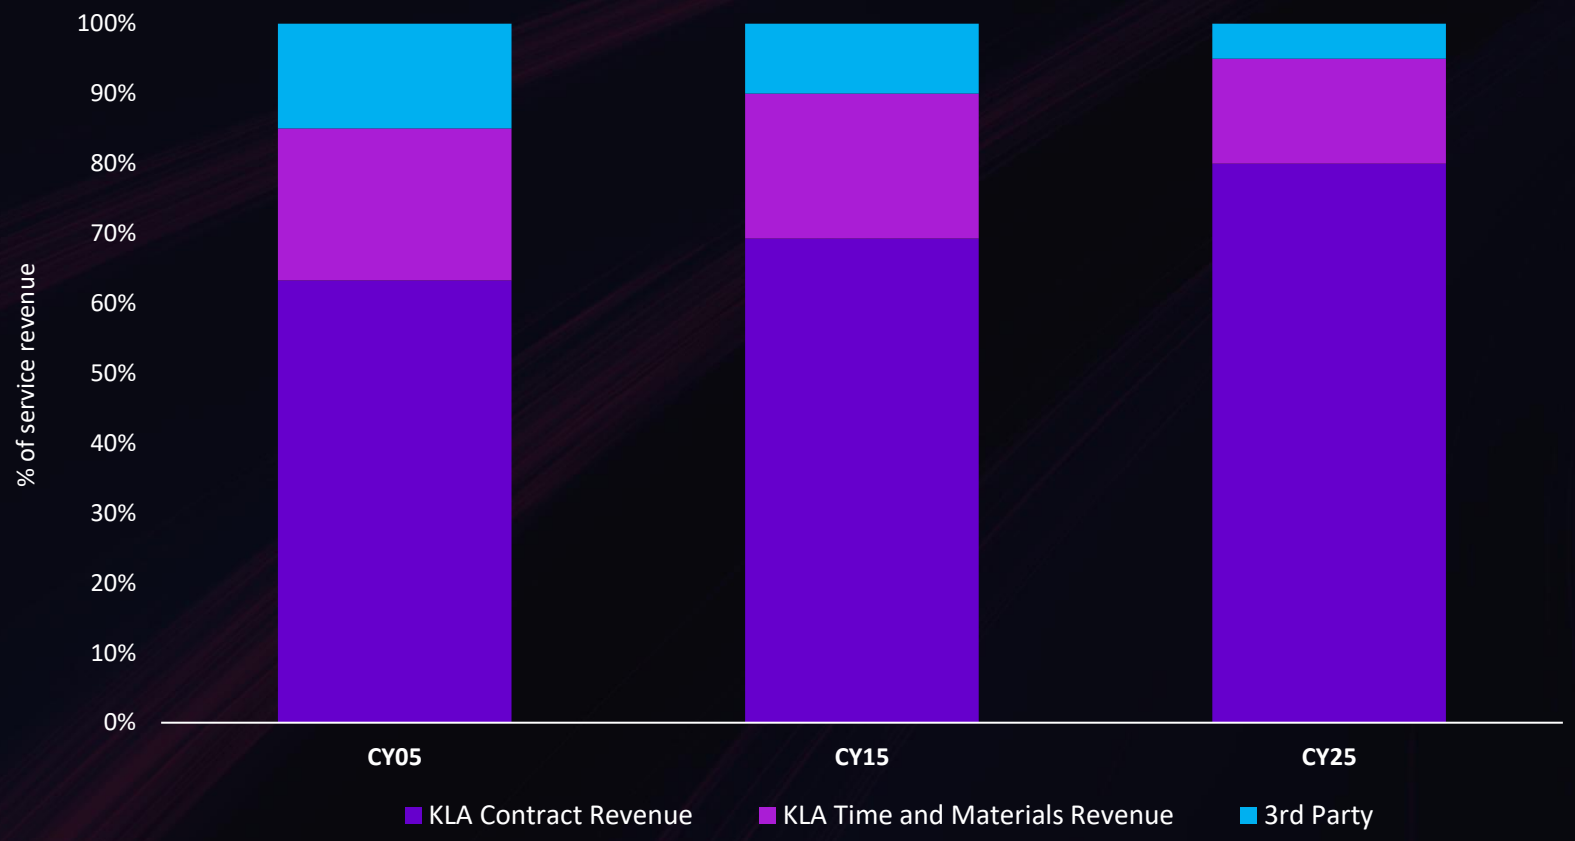

Always-on service support

Multiple customer recognitions each year for above and beyond contributions

KLA Wins When Our Customers are Successful

Value of Contracts and Contract-Like Service Drives Share Over Time

95% of revenue is recurring: *inclusive of both contract and time-and-materials*

~3-year average contract length: *fully comprehensive coverage for maximum availability at performance*

95% contract renewal rate: *extends value to customers year over year*

We define "recurring" as any UTID with 2 or more continuous years of service

The KLA Operating Model is Foundational to Services Value

INNOVATE

- Long service life results in rich data
- New models and applications to improve customer experience and increase productivity
- Roadmap to build and power new AI systems for proactive service delivery

KLA Services AI-Powered Productivity Flywheel

Capturing and Leveraging Context in All Aspects of the Services Business

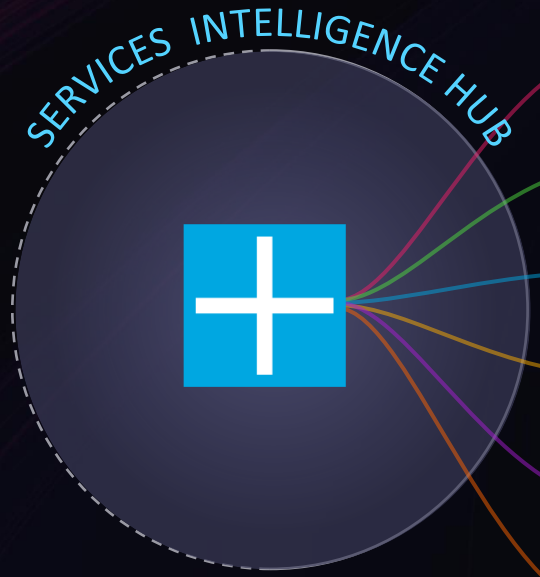

People | Parts | Knowledge — **Tools in Fab**

KLA Services Applications Solve Customer Problems

Customer Challenges

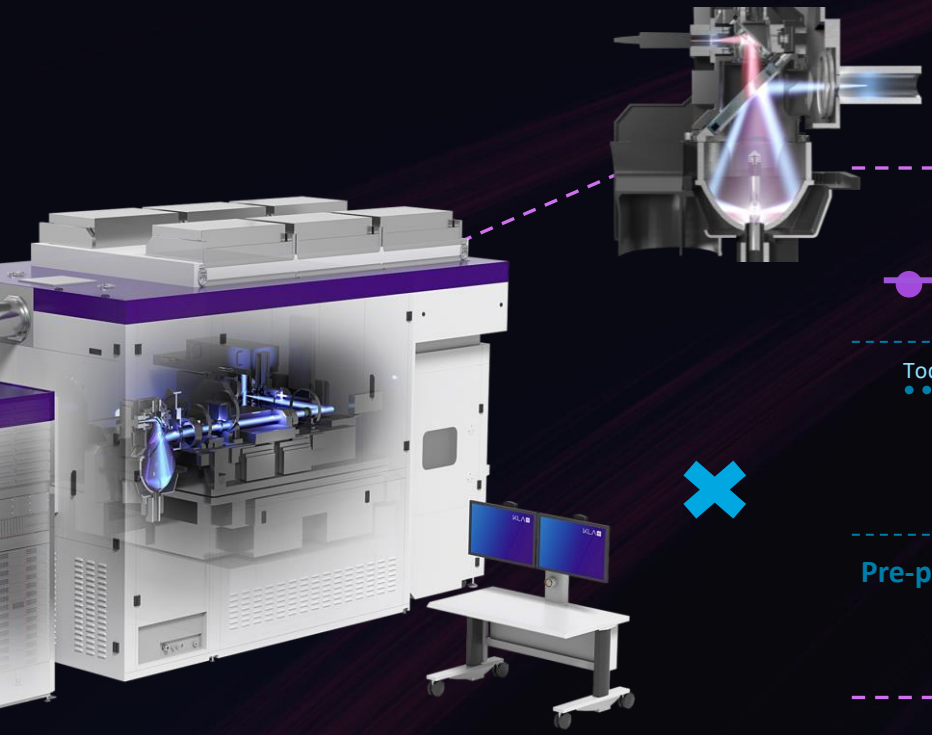

- Yield Ramp and Optimization
- Geographic Expansion
- Device Complexity
- Skilled Talent Demands
- Unplanned Downtime
- Fab Efficiency and Asset Lifetime Extension

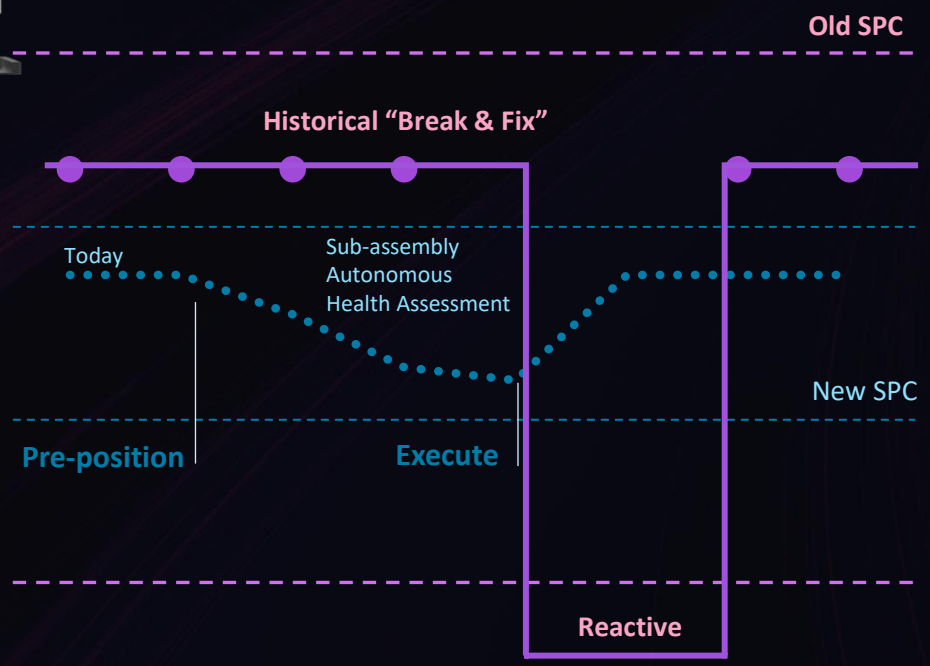

Service Applications Portfolio

- Global remote support
- Accelerated recipe deployment
- Predictive tool health insights
- Fleet performance optimization
- Autonomous synchronization
- On-demand agentic expertise

Predictive Tool Health Insights: Reducing Unscheduled Downtime

~1,200

unique parts and sub assemblies

Customer Experience

- Unscheduled to scheduled
- Production management
- Improved cost of ownership and cycle time

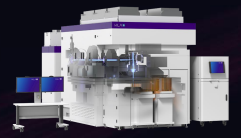

KLA Optimization

- Pre-position right people, right parts, right location
- First time success
- Productivity accelerator

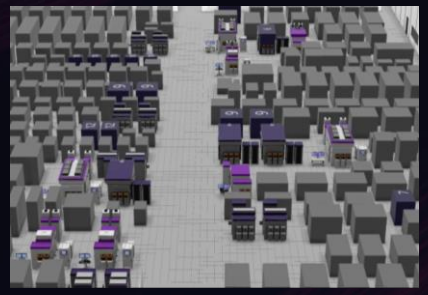

Autonomous Synchronization: 100% Performance 100% of the Time

After a service event, the tool must be matched to 25,000 configuration settings

Control Reference

Tool-to-Reference **~25,000**

Fab-to-Reference **~250,000**

Global Fleet-to-Reference **~1,250,000**

BEFORE: LIMITED VISIBILITY AFTER EVENT

AFTER: RESOLVE DISCREPENCIES BEFORE RESUMING PRODUCTION

Customer Experience

- Reduced global fleet variability
- Increased production capacity

KLA Advancements

- Automated spec harmonization
- Scalable operational infrastructure

On-Demand Agentic Expertise: Accelerating Time to Proficiency

Extensive experience and training requirements

High Mix — **>57,000** Installed base: 24 years median time to retirement

Global Presence — **>4,000** Customer facilities

Diverse Labor — **>3,500** Service engineers

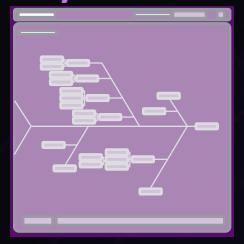

Proprietary Parts — **>260,000** Unique assemblies & spare parts

Harvest

Capture and aggregate intelligence data from KLA network

Synthesize

Dynamic knowledge model refresh and refinement

Digital Mentor

On demand delivery of guidance and instructions from knowledge network

Customer Experience

- Shared knowledge accelerates time to resolve
- Improved cycle time and CoO

KLA Advancements

- Frictionless global knowledge distribution
- Intelligent knowledge enablement / guidance

Digitize and Redeploy Knowledge of Master Engineers

The KLA Operating Model is Foundational to Services Value

EXECUTE

- Deep and flexible global infrastructure delivers scale and high customer value, driving competitive advantage for KLA
- Service expertise supports customer investment across logic, memory and advanced packaging product lifecycle
- Advanced training and documentation support solutions; from AR models to document translation

Services Revenue Growth Accelerates Across HBM Environments

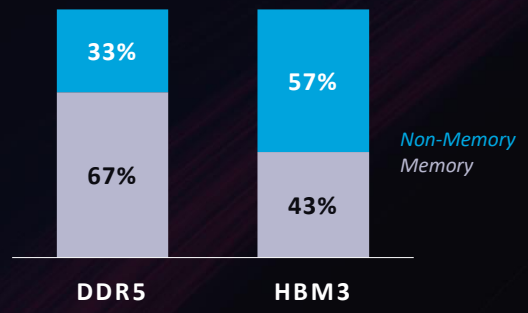

Environment

HBM3
chip size: 3X mm²

DDR
chip size: X mm²

Less redundancy, larger chip size

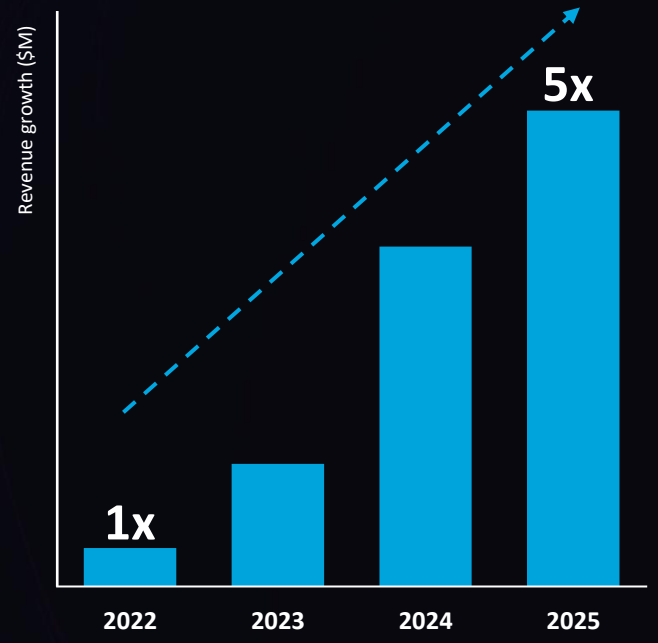

Increasing ratio of non-memory

KLA Action

- Align on performance and availability requirements
- Criticality and complexity driven product-based service portfolio
- Delivering node-relevant value consistently / globally

Results

The Growth Opportunity: Increased Device Complexity + Advanced Product Models + Tighter Requirements

Services Revenue Growth Accelerates Across Advanced Packaging

Environment

- Technology and experience from front end process control systems
- Increasing device complexity and process control intensity

2008

ICOS™

2015

CIRCL™-AP

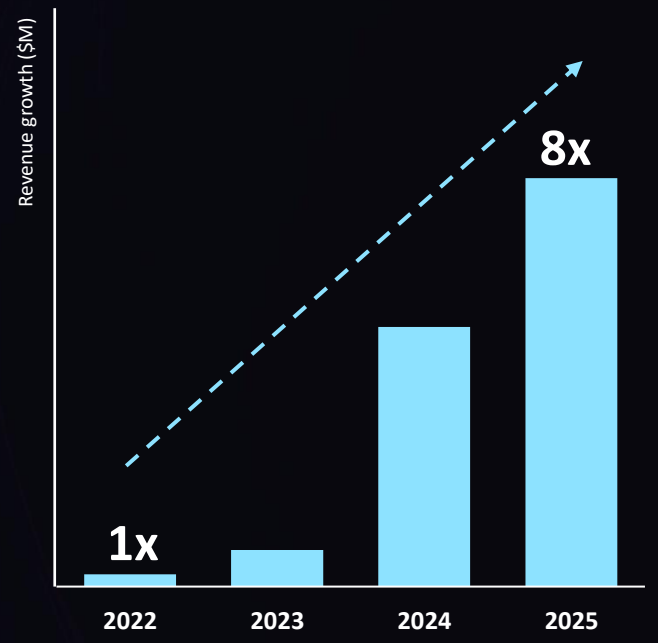

KLA Action

Engineered outcome-based service models

Modernized back-end with same rigor delivered for fab front-end

Leveraged global infrastructure to meet aggressive customer ramps

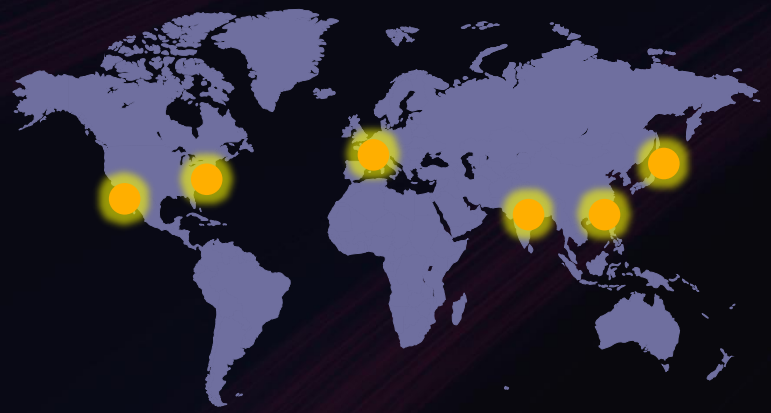

Results

The Growth Opportunity: Increased Device Complexity + Advanced Product Models + Tighter Requirements

KLA Services Supports Global Expansion and Green Field Ramps

Global Expansion

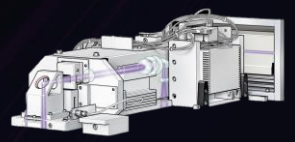

New regions and greenfield sites

- Expertise in home country
- Hire and ramp local staff

- Follow-the-sun support
- Digital knowledge transfer

- Local part hub integration
- Intelligent spares logistics

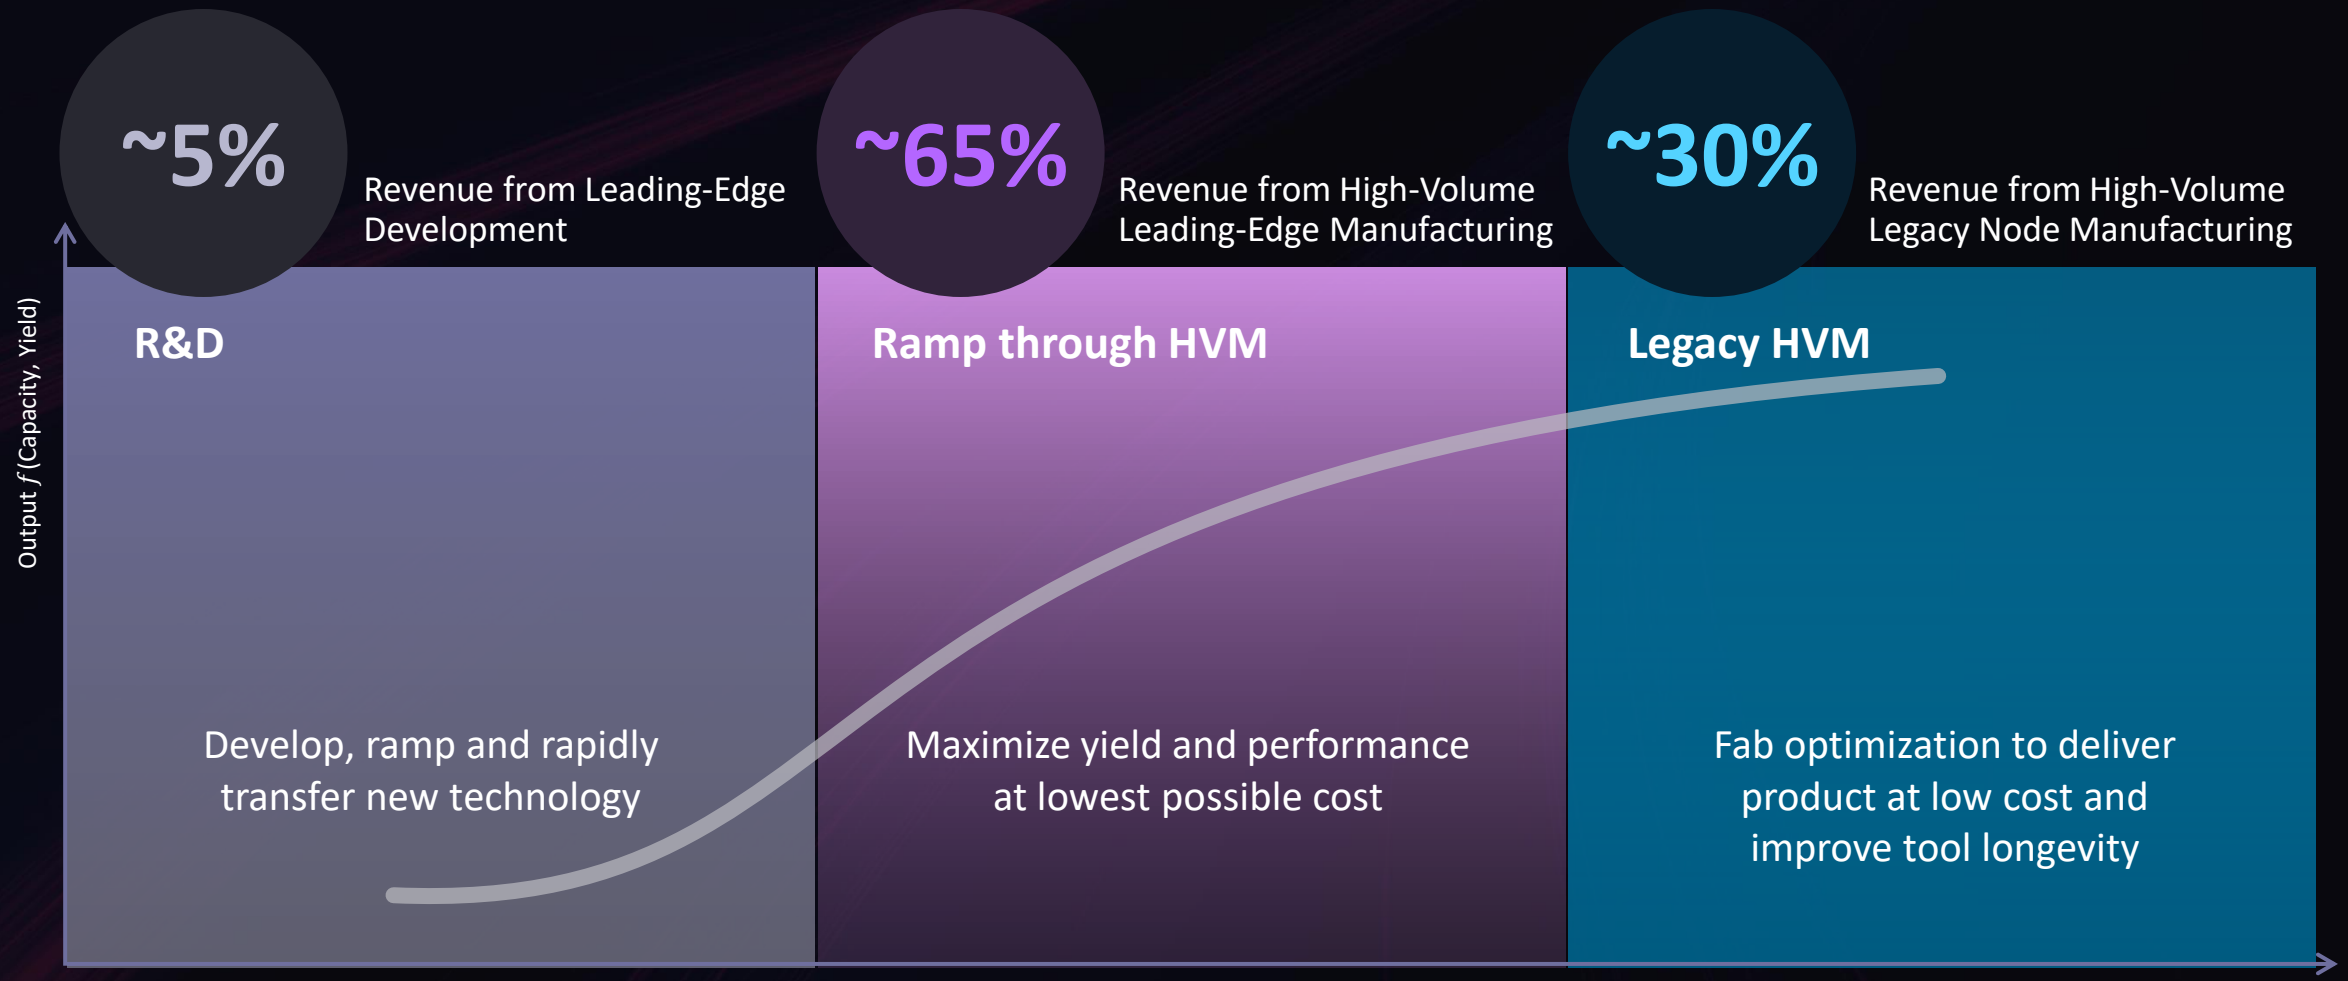

Customer Experience

- Faster yield ramp
- Global consistency in fab outcomes

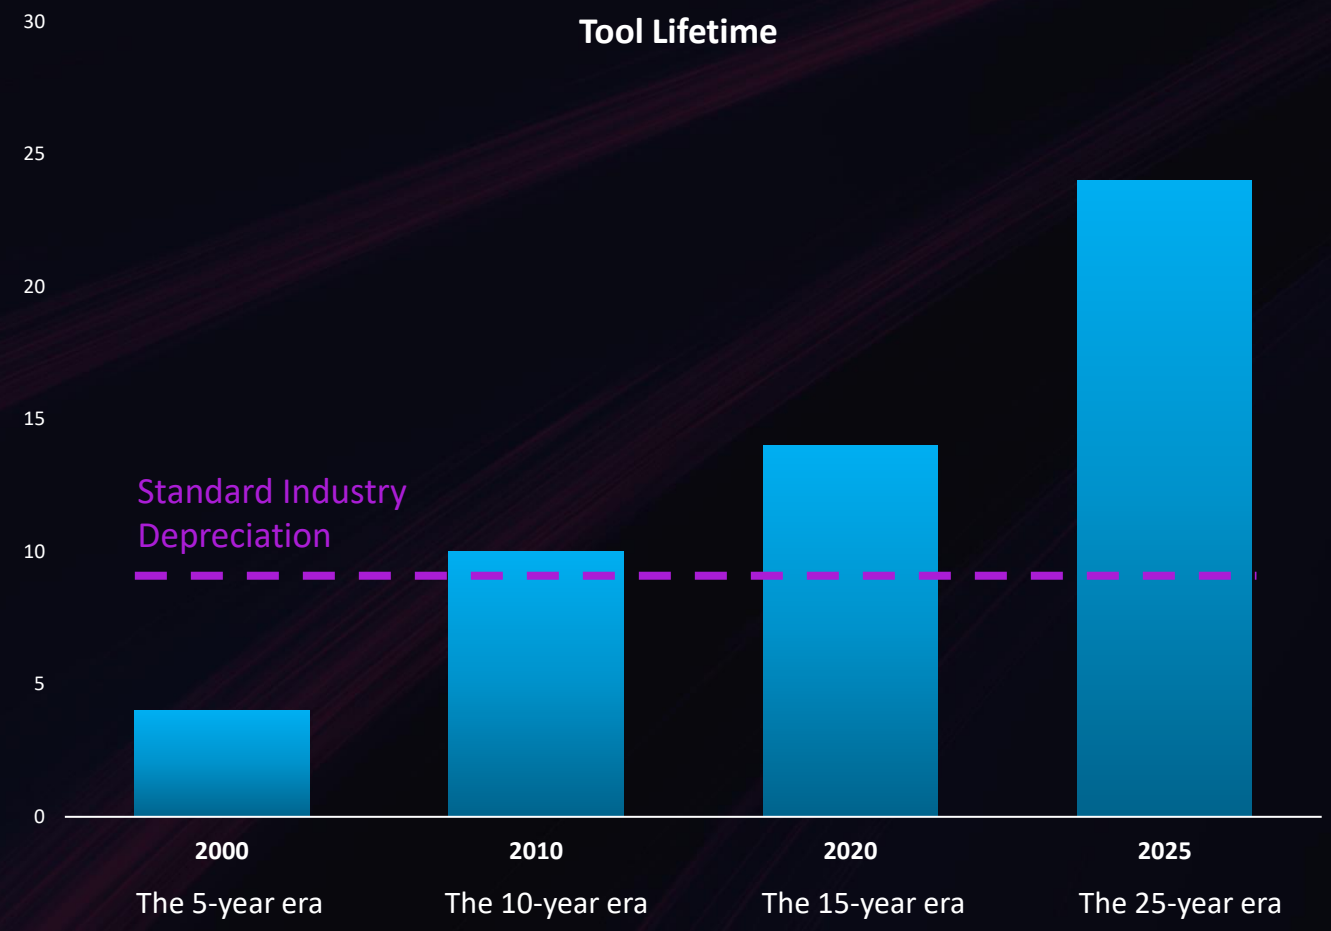

KLA Advancements

- Scalable, cost-effective service delivery
- Predictable service operations

KLA Services Value and Revenue Span Tool Lifecycle

Maximizing Customer ROI Through Tool Life Extension

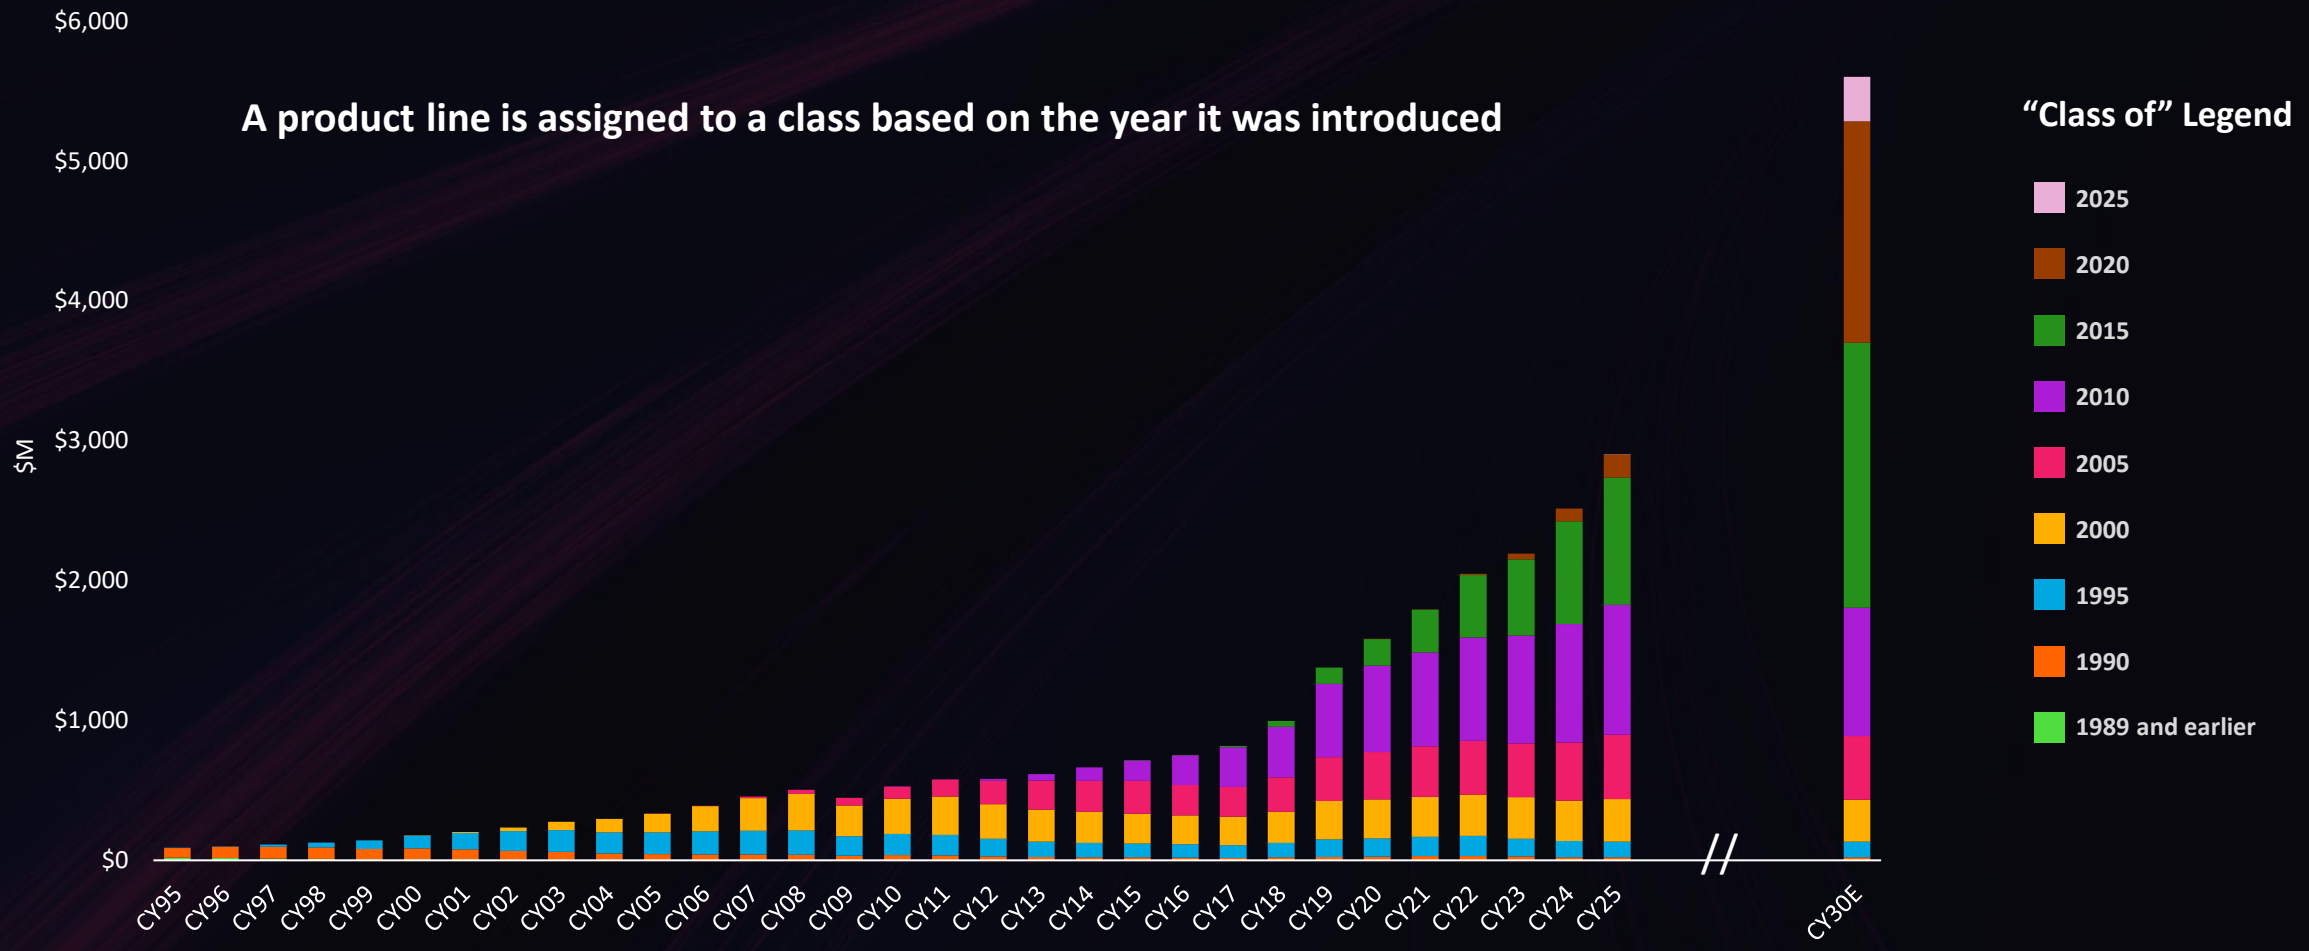

Extending tool lifetime provides **customers** with the most economic solution to producing older technologies, well beyond the standard industry depreciation time.

KLA Approach

- **Structural design and serviceability**: Tools are designed and built with more extendable systems, greater serviceability and durable supply chain
- **Active obsolescence management**: Solve hundreds of obsolescence problems each year
- **Modernization and performance upgrades**: Develop upgrades to extend life of the tools and improve performance

Median Time to Tool Retirement has Increased to 24 Years

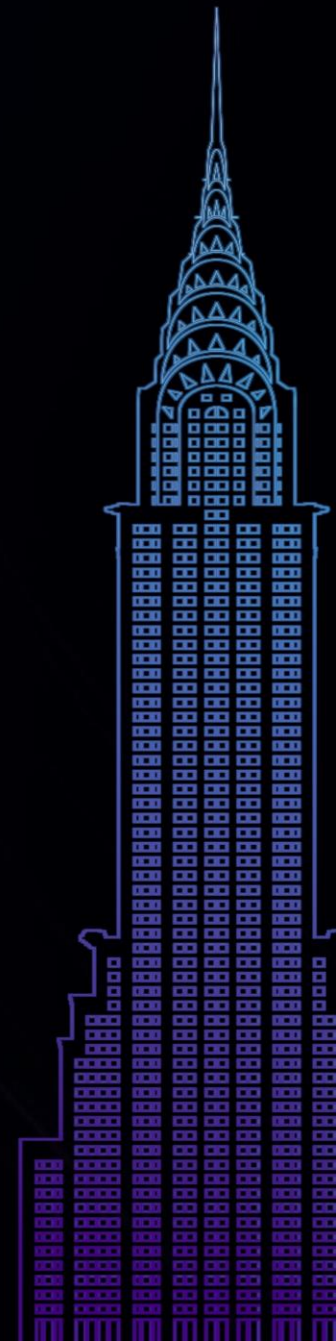

Long Tool Life Drives Extended Customer Value and Service Durability

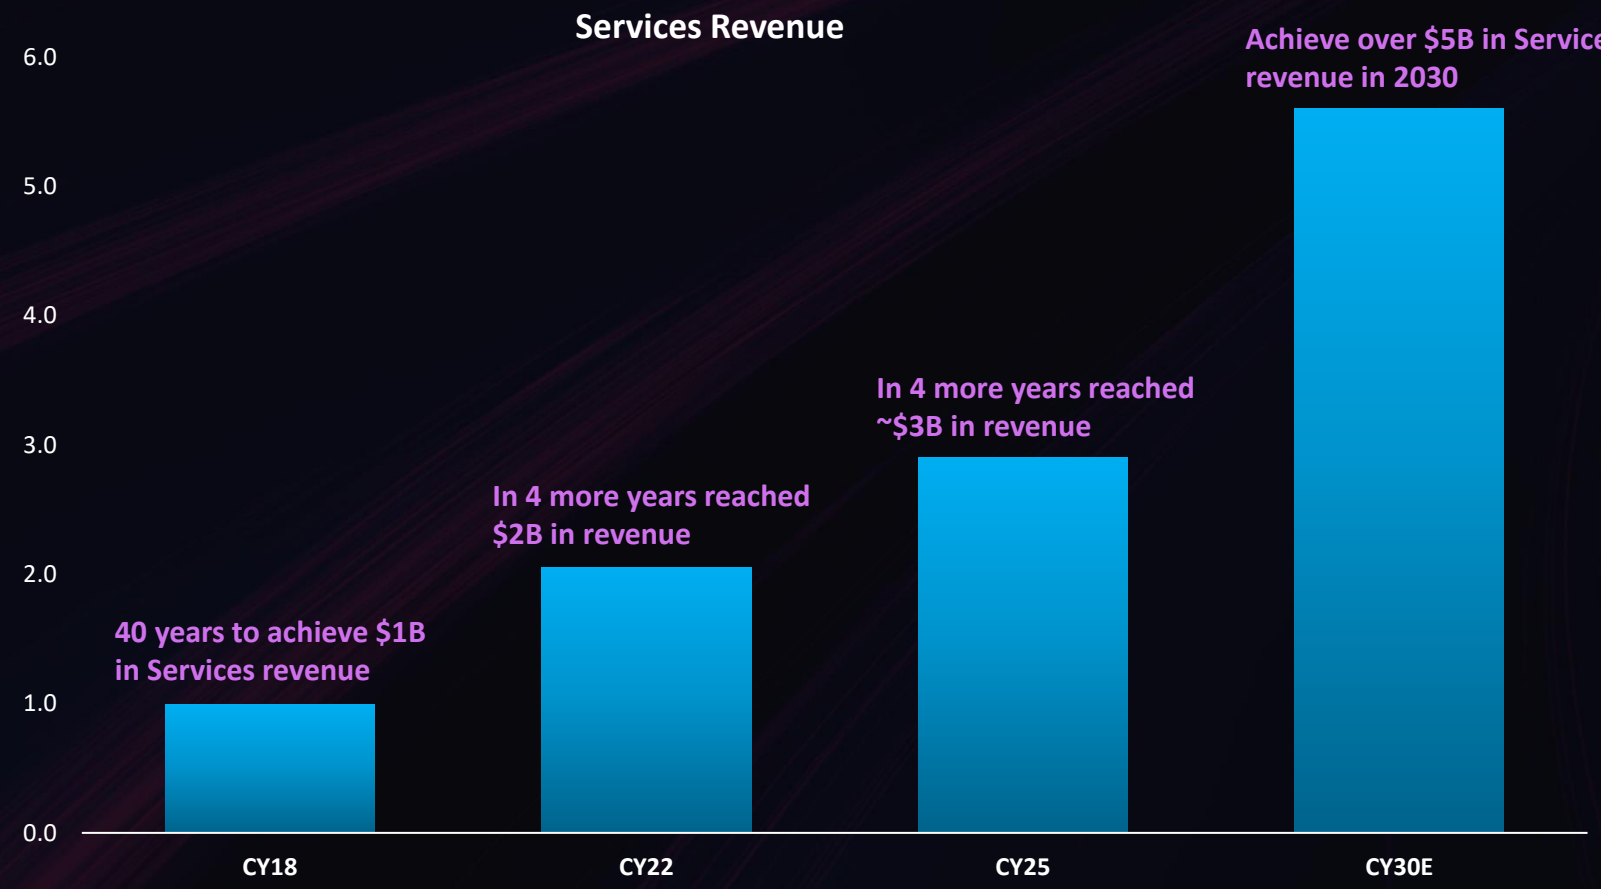

Lifetime Service Revenue Exceeds Tool Revenue

Jump in 2018-2019 from technical internal accounting change

2030 Services Plan

Our Commitments to Customers Deliver Commitments to Investors

COLLABORATE

Enabling customer success with deep partnerships and service excellence aligned with customer outcomes

INNOVATE

Depth of KLA data and rigorous KLA Operating Model improves customer experience, drives productivity and enables AI-powered application development

EXECUTE

Industry-leading service model with >80% of revenue coming from multi-year, subscription service contracts

Increasing CAGR from 12-14% to 13-15%

Note: Calendar year figures; [1]Includes first year warranty in accordance with adoption of ASC606

Investor Day 2026

KLA

Path to 2030 Target Model

Bren Higgins, EVP, CFO and Global Operations

March 12, 2026

Key Messages | Path to 2030 Target Model

1. KLA is **well positioned** to **drive sustainable outperformance uniquely benefiting** from **accelerating equipment growth** fueled by high performance compute (HPC) infrastructure and AI, which is driving **increasing process control intensity**

2. **The KLA Operating Model** focused on collaboration, innovation, and execution **drives product differentiation and portfolio strategy** that meets customer needs**,** drives competitive advantage, enables gross margins and supports reinvestment

3. Operational execution **delivers consistent and scalable results** across manufacturing and supply chain, services, R&D and SG&A to **drive incremental operating margin model and margin expansion**

4. 2030 target model **builds on credible history of execution. Drives relative growth, operating leverage** and an **assertive and consistent capital allocation strategy** enabled by **strong free cash flow** and an investment-grade balance sheet

Targeting 2030 Revenue of $26B (+/- $2.5B) and Non-GAAP EPS of $84 (+/- $8) Driving Strong FCF Generation and Capital Return > 90%

Significant Progress Since 2022 Investor Day

WHERE WE WERE
2022 Investor Day

- Target revenue of $14B +/- 500M and EPS of $38 +/- $1.50 by 2026
- Improve share of market by ~100 bps
- Grow Services revenue 12-14%
- Continue investment to broaden portfolio & expand market leadership
- Integrate recent acquisitions and drive synergies
- Codify KLA Operating Model
- OM% 41-43% w/ incremental operating margins at 40-50%
- Target capital returns > 85% of FCF

WHERE WE ARE
2026 Investor Day

- Delivered strong relative growth; Will exceed $14B revenue; Semi PC CAGR +6.5% vs. wafer equipment market (2021-2025)
- Achieved >150 bps of market share & intensity gains (2021-2025)
- Grew recurring revenue from Services (13% revenue CAGR from 2021-2025)
- Portfolio positioned to enable differentiation and market share in core WFE & Advanced Packaging
- Invested in talent and global infrastructure to support structural growth
- 2025 OM% 43.6% w / incremental operating margin of 47% (2021-2025)
- Capital returns >85% of FCF since 2022

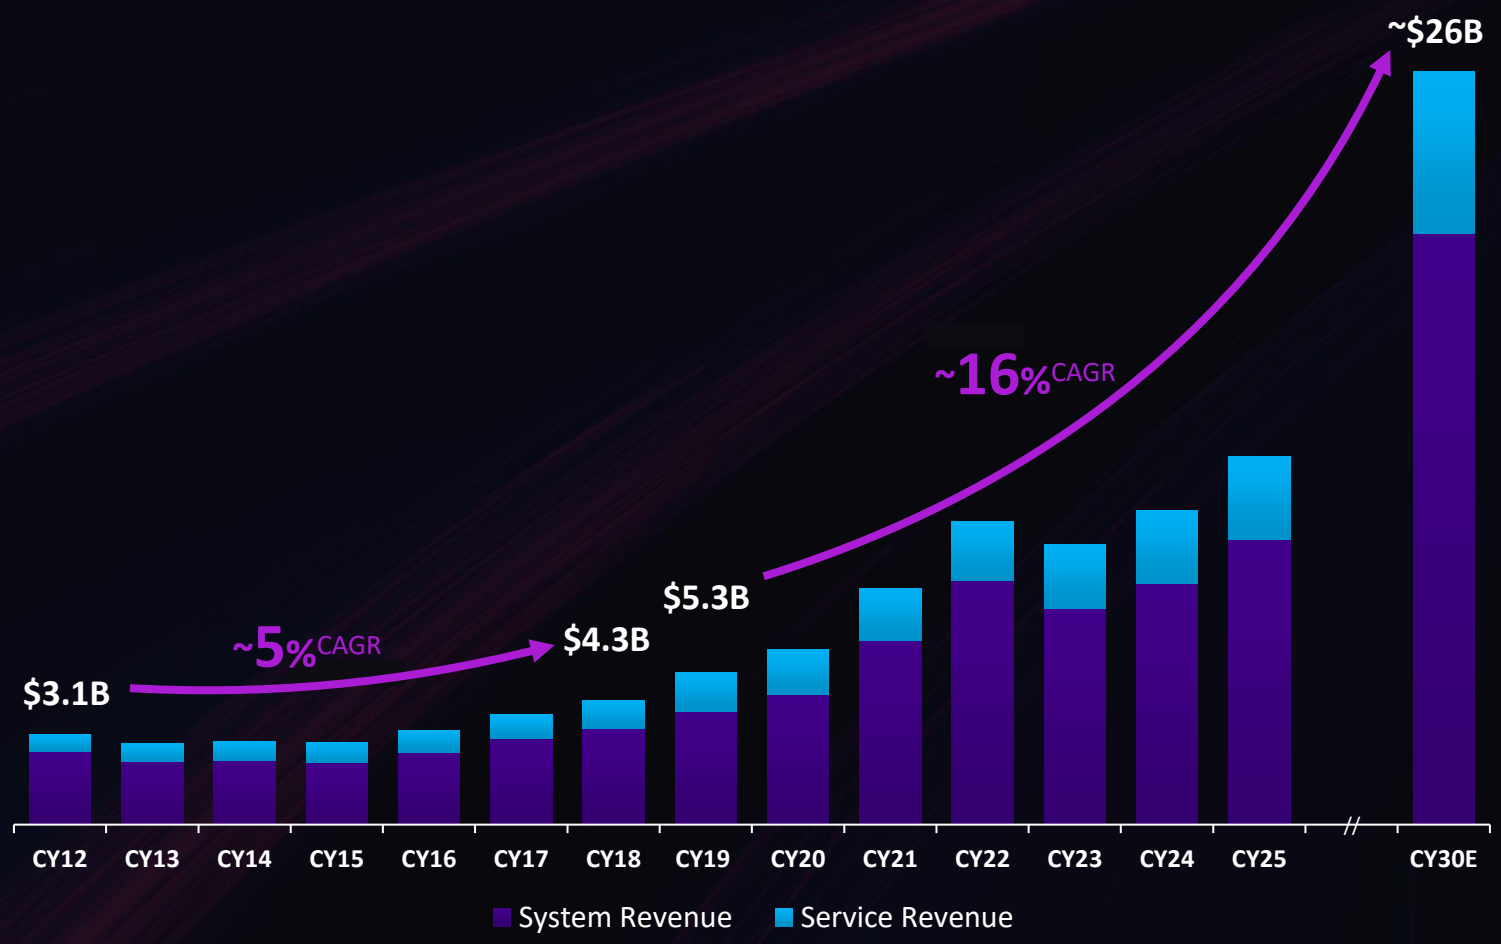

WHERE WE ARE GOING
2030 Target Model

- Targeting 13-17% revenue growth CAGR supporting accelerating semiconductor revenue growth
- Continuing to grow KLA's share of Wafer Equipment by ~150 bps (+/- 25bps)
- Services revenue target range increased to 13-15%
- Optimizing business through technology leadership, portfolio leverage & productivity improvement
- Sustaining 40-50% incremental operating margin model to deliver 45-47% OM%
- Capital returns > 90% of FCF

Consistent Focus on Growth Drivers, KLA Relevance, Operating Leverage and Deploying Capital

Source: KLA filings and estimates, Gartner April 2022. All metrics are Non-GAAP

Sustainable Revenue Growth

Key Characteristics of Target Revenue Mix

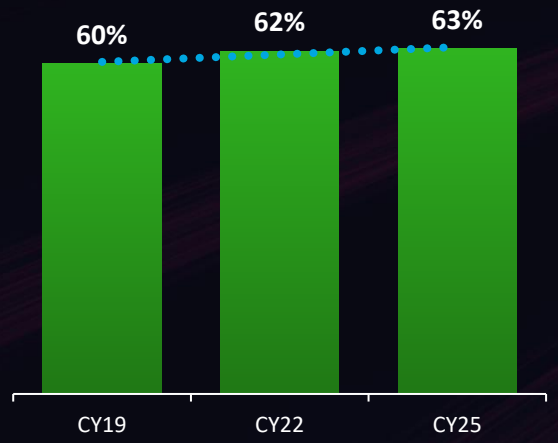

- Structural growth accelerating due to semiconductor revenue growth with flat to rising wafer equipment intensity
- Leading edge process roadmap and growing design starts drive node progression in foundry / logic
- Large high value chips drive process control relevance in logic and memory
- Scaling in DRAM & High Bandwidth Memory (HBM) requirements drive higher process control intensity
- Advanced Packaging provides a new served market for KLA adoption
- Market share gains and intensity improvements continue
- Growing recurring revenue streams from Services

Multiple Vectors Accelerating KLA's Long Term Revenue Growth

Source: KLA filings and estimates

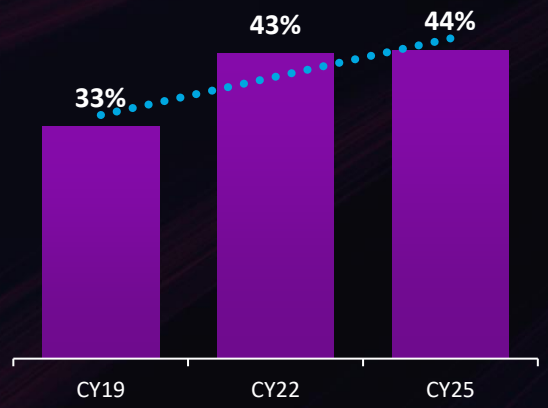

Strong Track Record of Execution Drives EPS Compounding

Gross Margin[1]

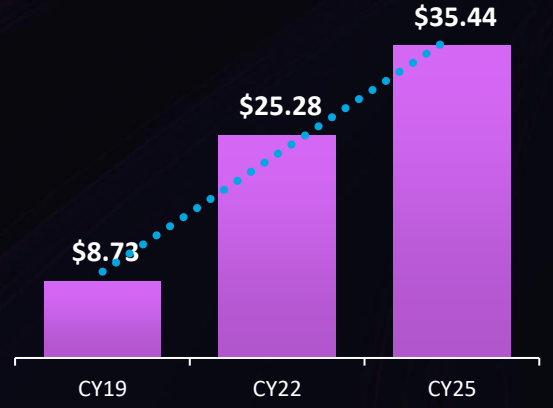

- GM% ranked among leaders in semiconductor industry
- Industry-leading gross margin driven by differentiation & value pricing
- Integrated and improved acquired businesses
- Leverage infrastructure to drive scale on revenue growth
- 2019-2025 incremental GM of 65%

Operating Margin[1]

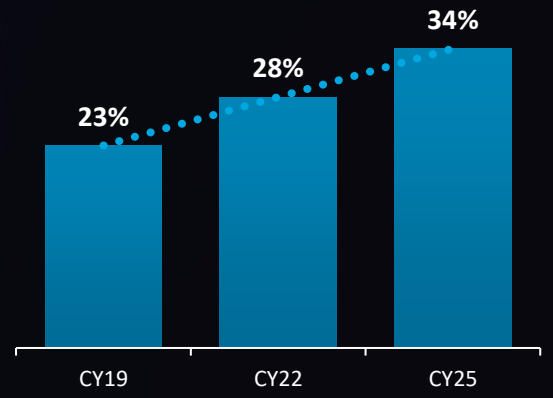

- Superior operating margin profile vs. peer group
- Extendibility of product platforms reduces R&D intensity, driving higher ROI across the portfolio
- Focus on productivity across the enterprise
- Sustainably delivering 40% to 50% incremental operating leverage (2019-2025: 51%)

Diluted EPS[1]

- Strong earnings leverage
- Consistent share repurchases
- Shares outstanding down 18% since 2019 investor day
- 26% diluted EPS[1] CAGR from 2019 – 2025 (Revenue CAGR: 16%)

FCF Margin[1]

- History of strong FCF margin across all business cycles and economic conditions
- Average FCF margin of 30% since CY19
- Investing in working capital to support growth
- Capital expenditures of 2-4% of revenue

Consistent Growth and Execution in Key Profitability Metrics

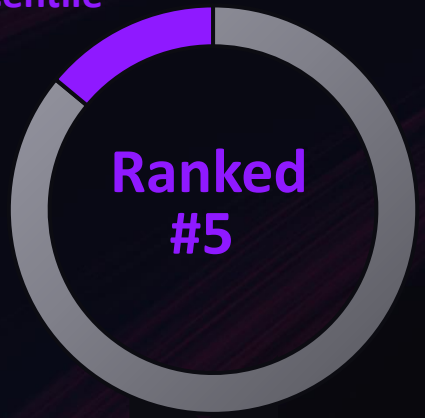

[1]Non-GAAP measure, please see Appendix for reconciliation

Long Standing History of Financial Performance

KLA vs. the SOX Index Over Last 10 Years

Gross Margin[1]

86th Percentile

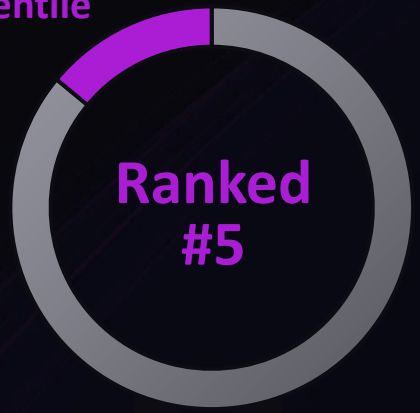

Non-GAAP Gross Margin %

Captures a company's differentiation and competitive advantage

Operating Margin[1]

86th Percentile

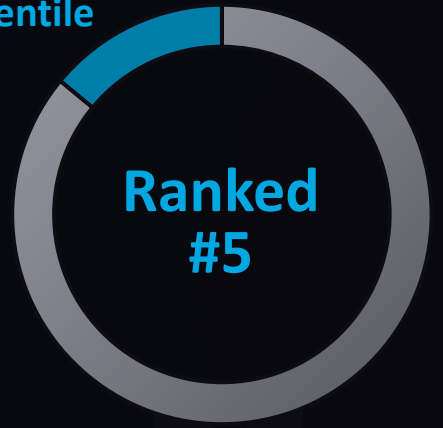

Non-GAAP Operating Margin %

Captures a company's differentiation plus operating excellence and discipline

FCF Margin[1]

86th Percentile

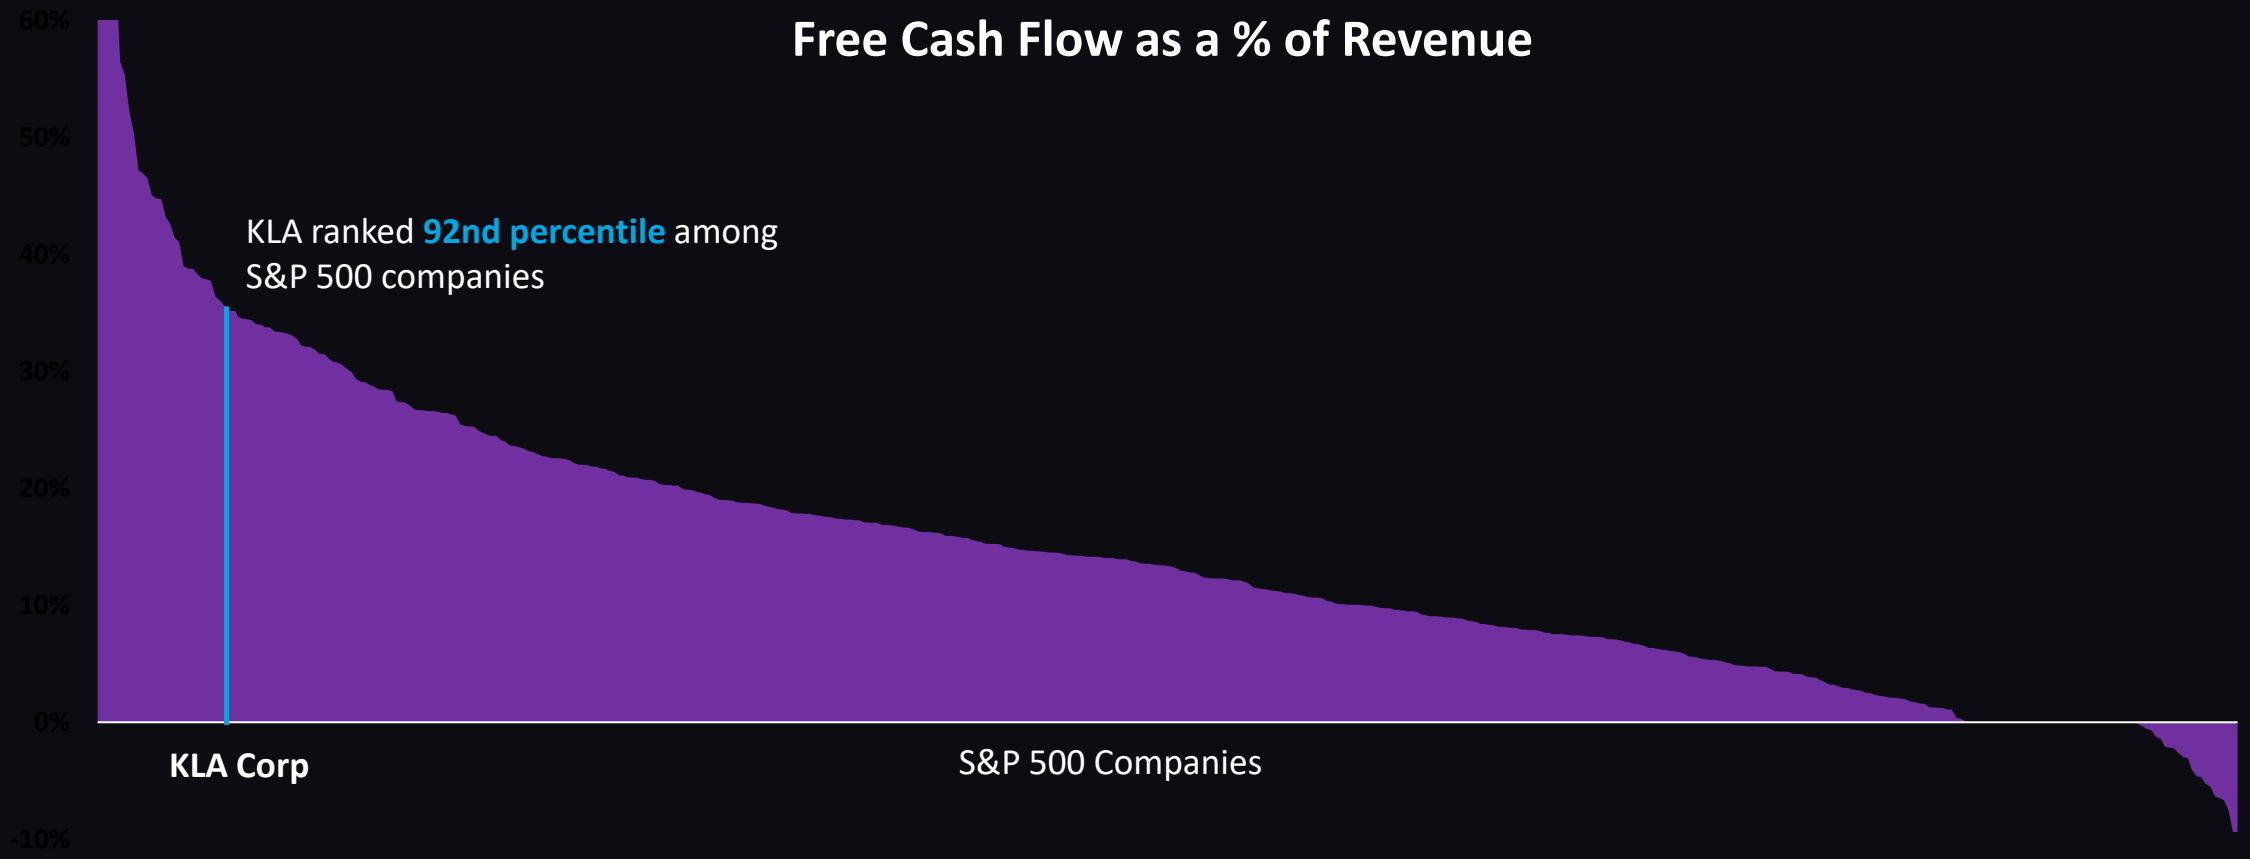

Free Cash Flow Margin %

Captures a company's profitability, asset management and ability to return capital

[1] Non-GAAP, excludes new SOX additions without 10-year public financial results.

Note: Only semiconductor-related business segments used

HPC / AI Era - KLA Uniquely Benefiting Across Segments

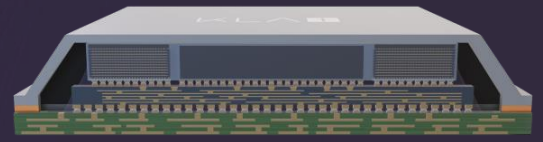

Advanced Logic

- More designs
- Leading edge process roadmap
- Increasing capacity needs
- Larger chip sizes: defect density / value
- Rigorous chip performance specifications
- Limited tool re-use

Memory

- Increasing EUV layers
- Increasing capacity needs
- Larger chip sizes – capacity driver
- Lower process variability
- Reducing redundancy
- Increasing logic circuitry

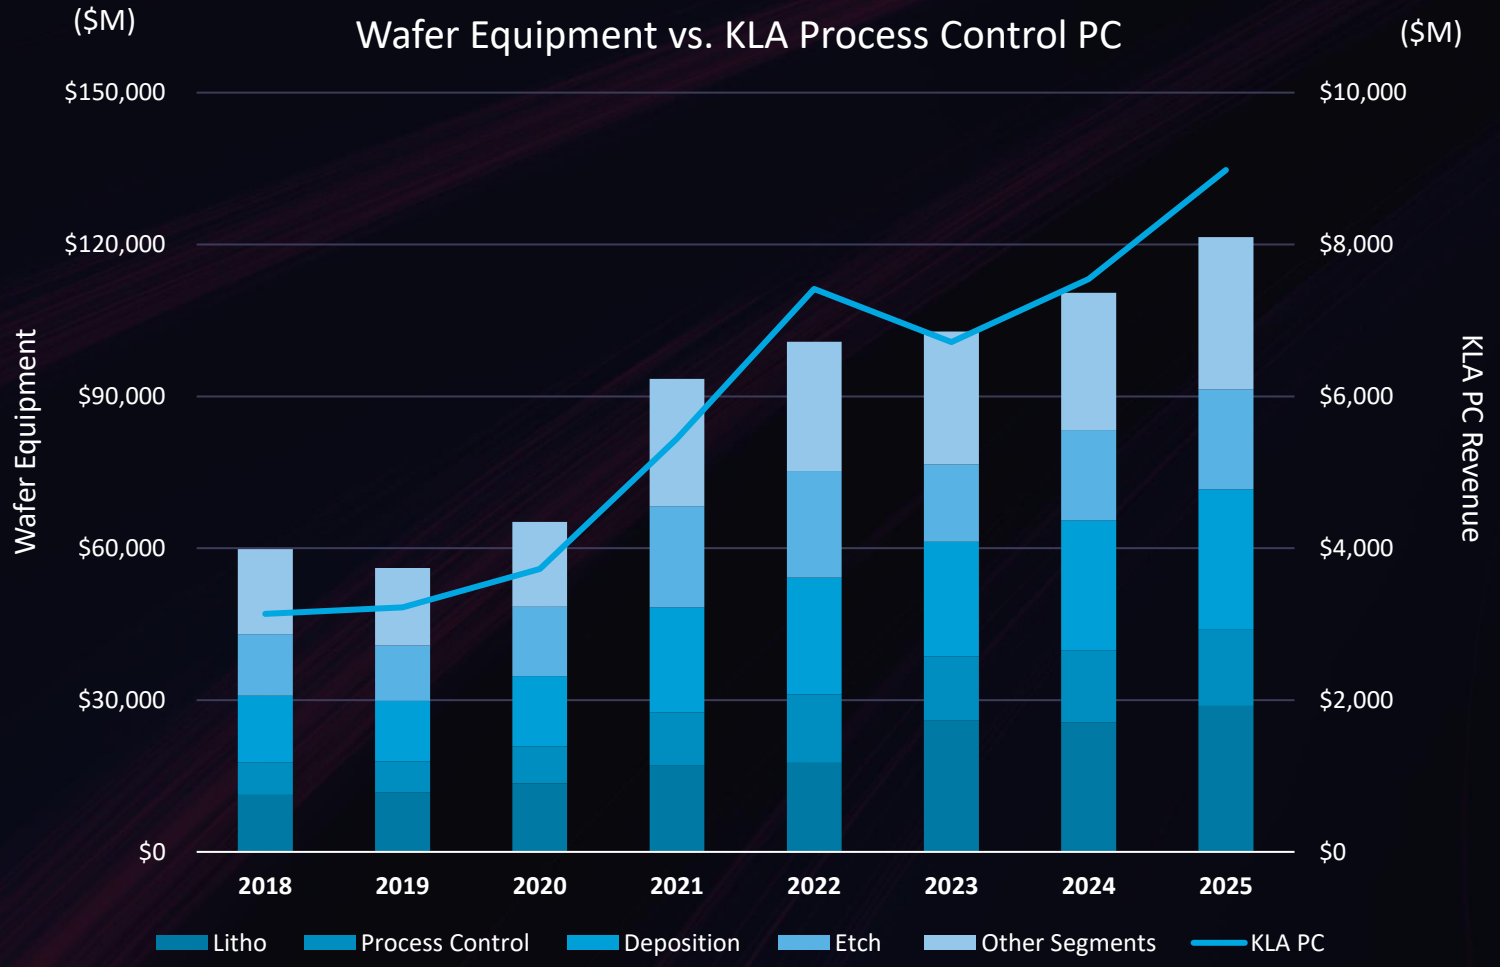

Advanced Packaging

- Both memory & logic
- Front end like processing
- Higher $$ loss impact with yield loses
- Higher sampling rates
- Rising process complexity

HPC / AI Drives Continued Momentum in KLA Relative Demand

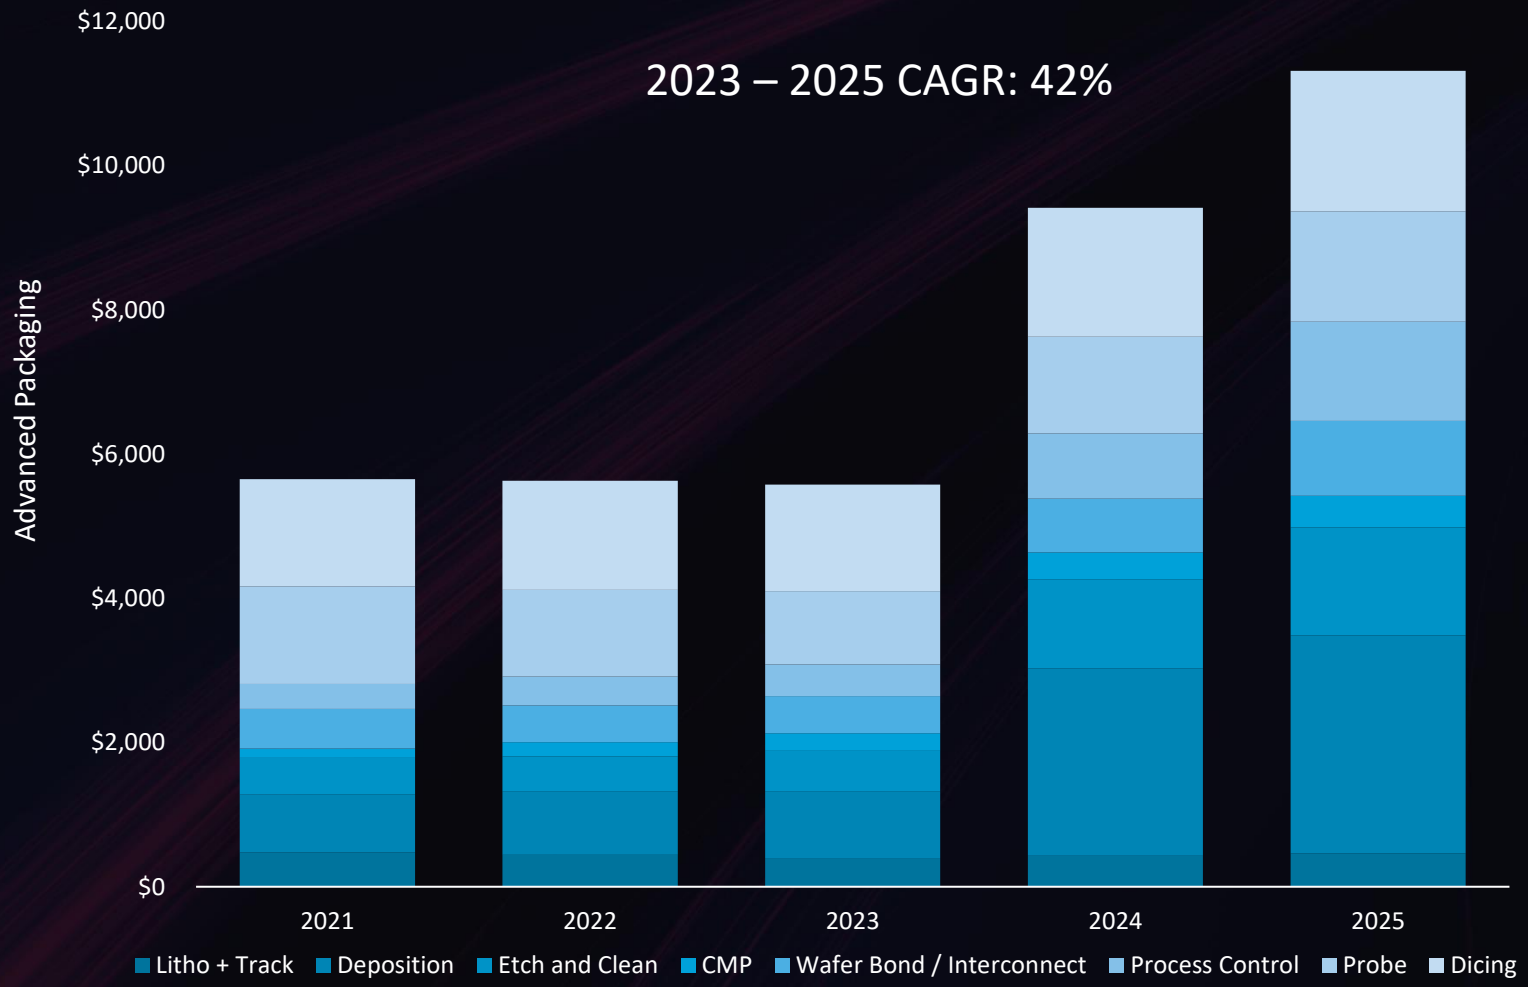

Process Control Has Been One of the Fastest Growing Segments & HPC-Related Opportunities are Accelerating

Segment	18-25 CAGRs	19-25 CAGRs	20-25 CAGRs
Lithography	14%	16%	16%
Process Control	**13%**	**16%**	**16%**
Deposition	11%	15%	15%
Etch	7%	10%	8%
Other Equipment	9%	12%	12%
Wafer Equipment	**11%**	**14%**	**13%**
KLA PC	**16%**	**19%**	**19%**

Advanced Packaging: Augmenting Traditional Wafer Fab Equipment Market

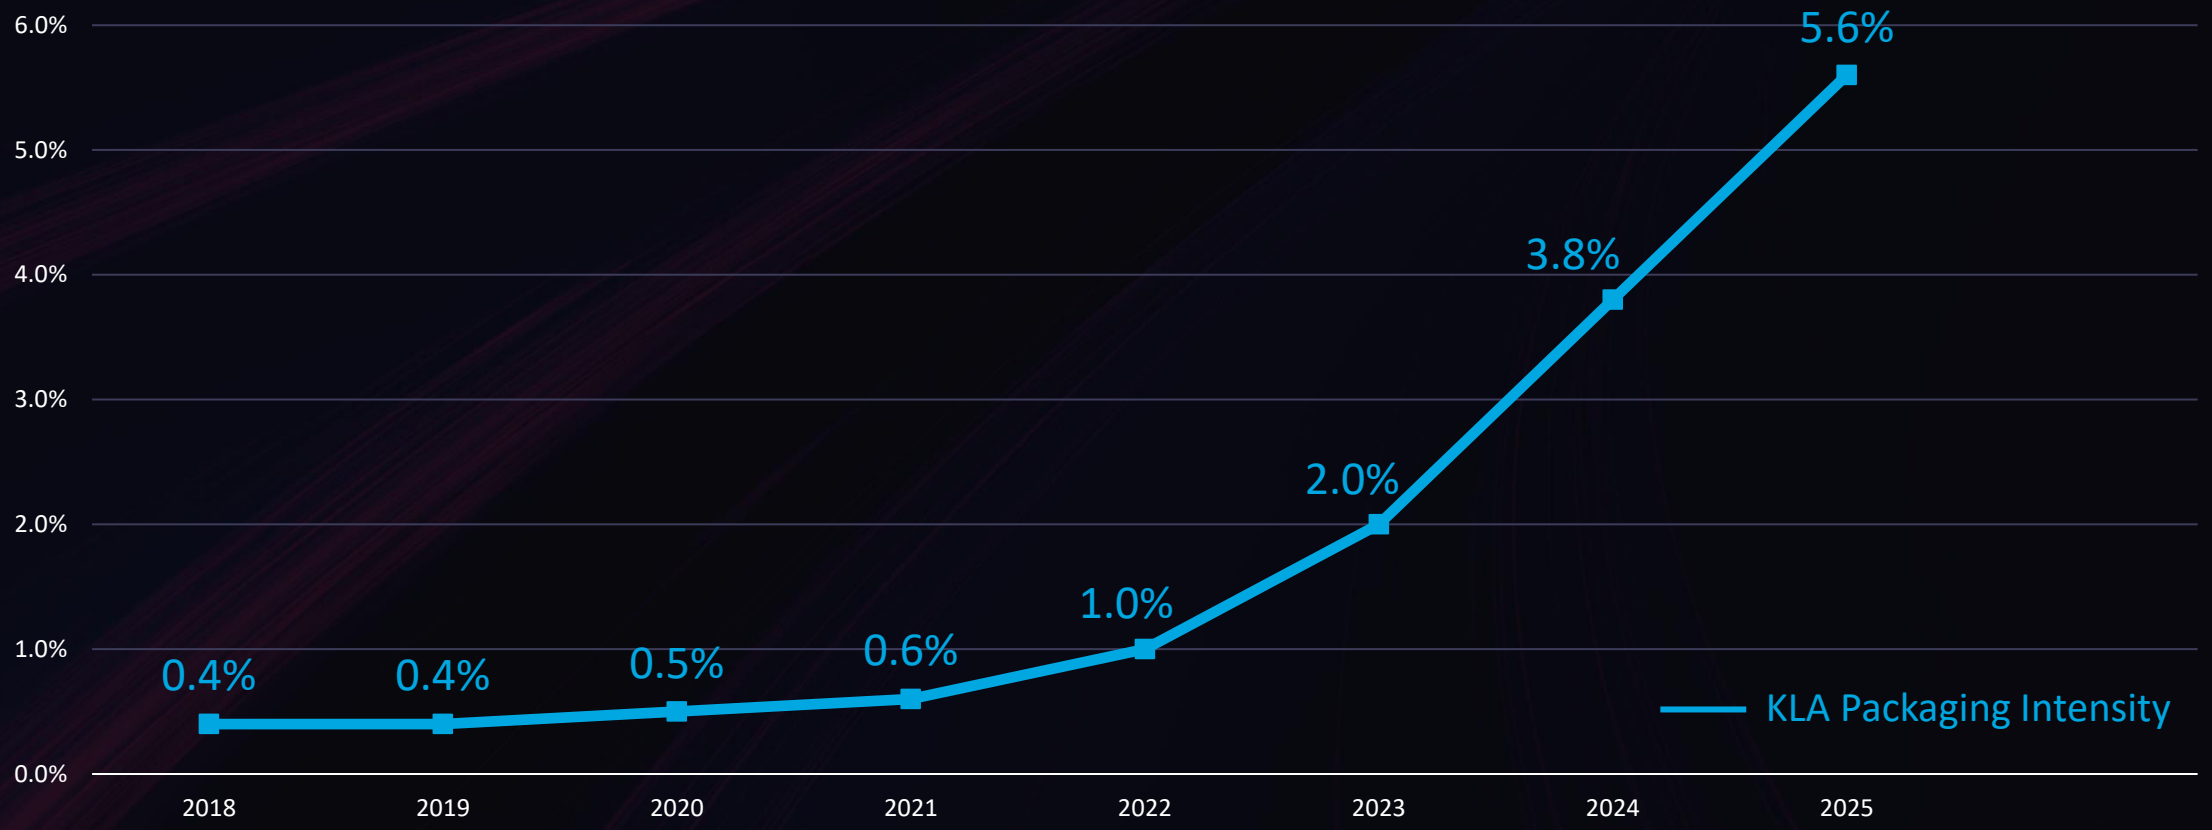

Segment	Market Leaders
Lithography + Track	**TEL,** Suss, **Canon, ASML**
Deposition	**AMAT, Lam, Naura,** ASMP, **KLA, Ulvac, Kokusai, Evatec**
Etch and Clean	**LAM, Screen, AMEC, AMAT,** Shibara, **KLA, Naura**
CMP	**AMAT, Ebara**
Wafer Bond / Interconnect	EVG, **TEL, AMAT (Besi/EVG)**
Process Control	**KLA, Onto, Camtek**
Probe	**TEL,** TSK, Semics, **SEMES**
Dicing	Disco, TSK, **KLA**

Bold indicates traditional WFE companies competing / earning revenue in Advanced Packaging market

The KLA Operating Model Guides Our Strategy and Differentiation

COLLABORATE

- Work closely with customers in early process technology development
- Work closely with key suppliers' early technology development
- Work across KLA to reuse applicable technology

INNOVATE

- Invest heavily in core technology research
- Invest well ahead of market requirements to ensure capability
- Extensive investment worldwide in labs and R&D talent

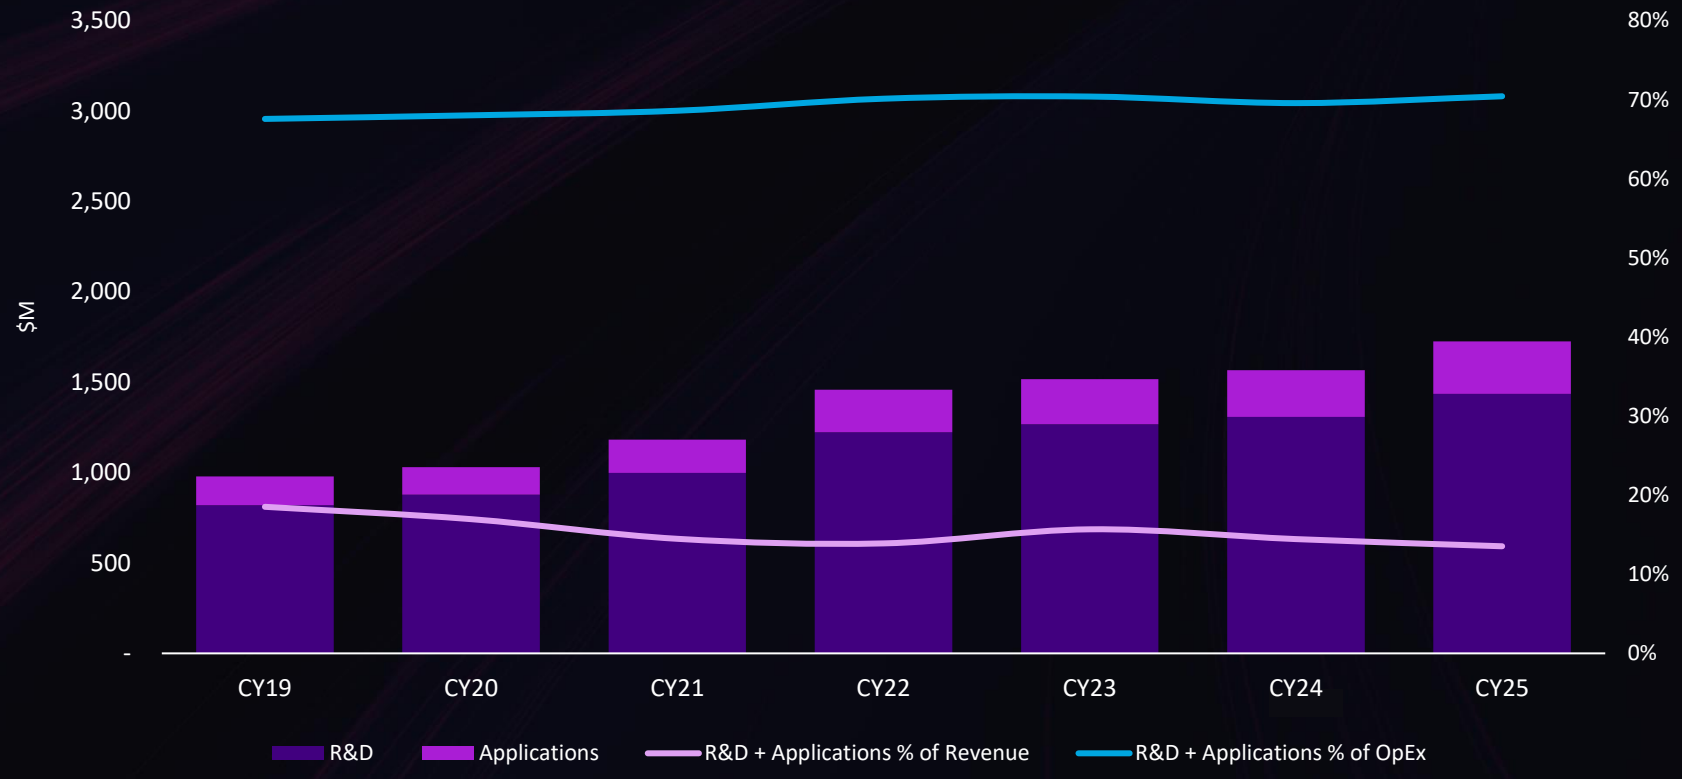

EXECUTE

- Consistently meet / exceed public financial targets
- Cadence of new product introduction
- Exert efficiency and discipline in our investments and operations
- Invest in critical supply chain partners
- Deliver sustainable outperformance

Strong & Consistent Results Driven by Collaboration, Innovation and Execution

Technical Investments are Essential to Our Market Leadership

R&D and Applications[1] Support Investment

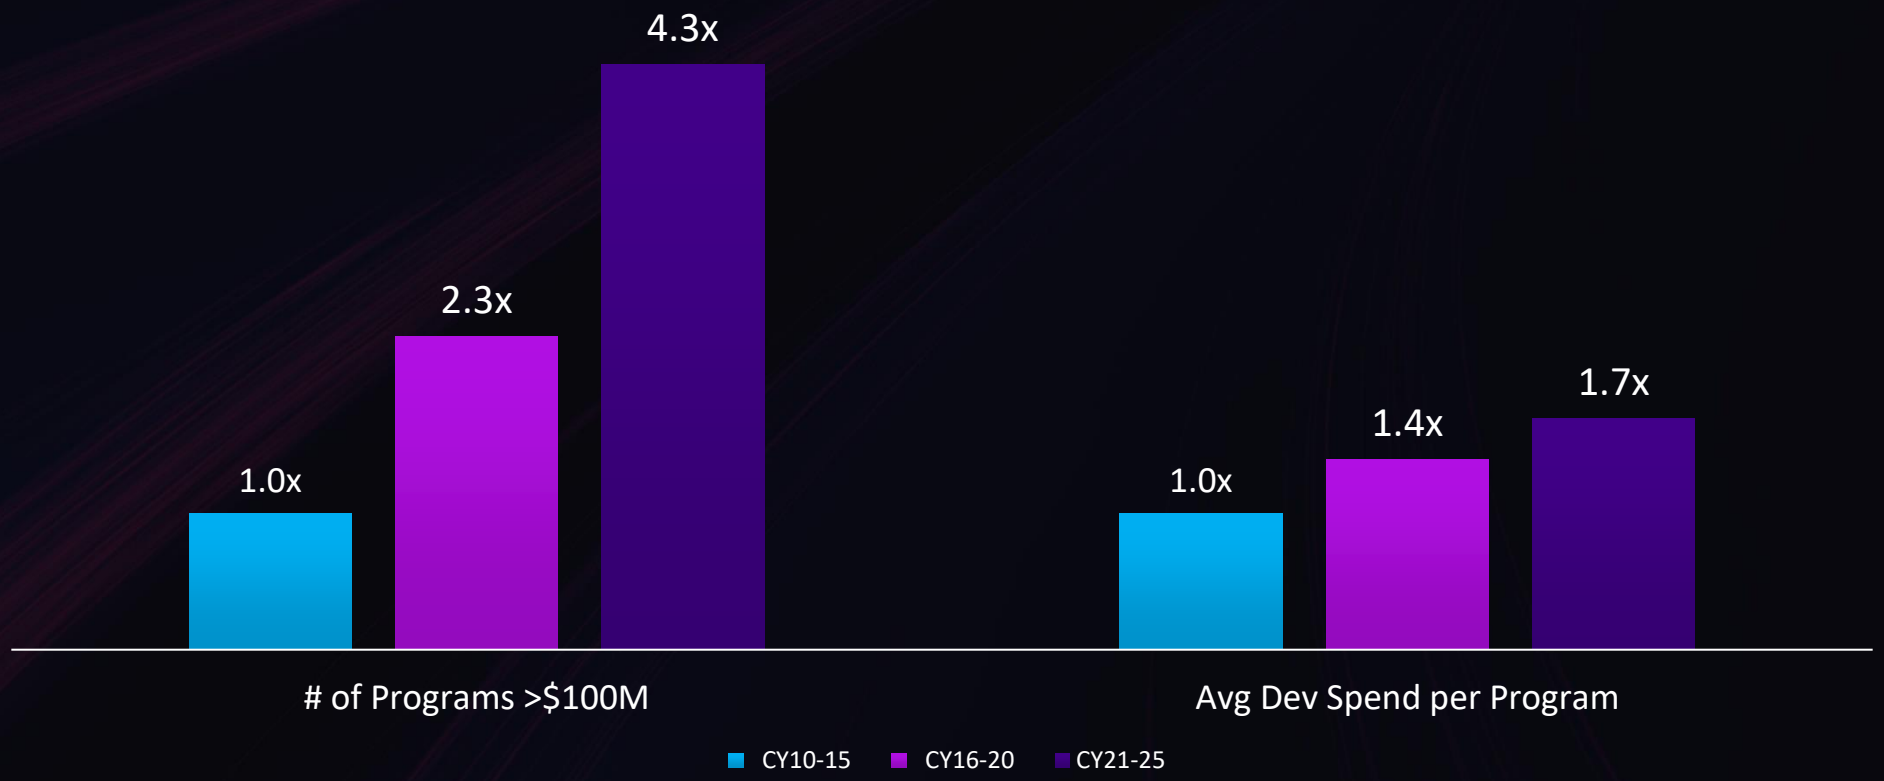

Investing in R&D and Technical Resources Drives Our Differentiated Portfolio Strategy

[1] Customer-facing technical and engineering resources, R&D & SG&A metrics presented are Non-GAAP, will provide GAAP recons in the appendix slides

R&D Program Investment Scale Drives KLA Market Leadership

Product Portfolio & Operating Model Uniquely Position KLA to Meet Customer Requirements

Investing in Innovation Across Portfolio to Meet Customer Technology Roadmap Requirements

Based on actual/expected lifetime development costs

KLA is a User and an Enabler of High-Performance Compute

Transition / Benefits from CPU to GPU

Execution

Product Gross Margin Improvement

Product Differentiation

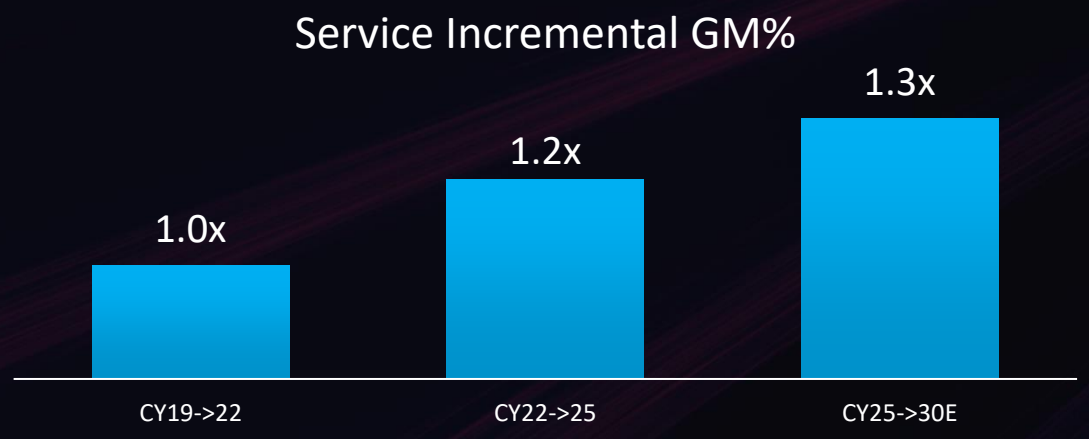

- Uniquely solve critical customer problems
- Portfolio enables customers to optimize capability vs. Fab productivity
- Discipline in understanding customer ROI
- Share in value created

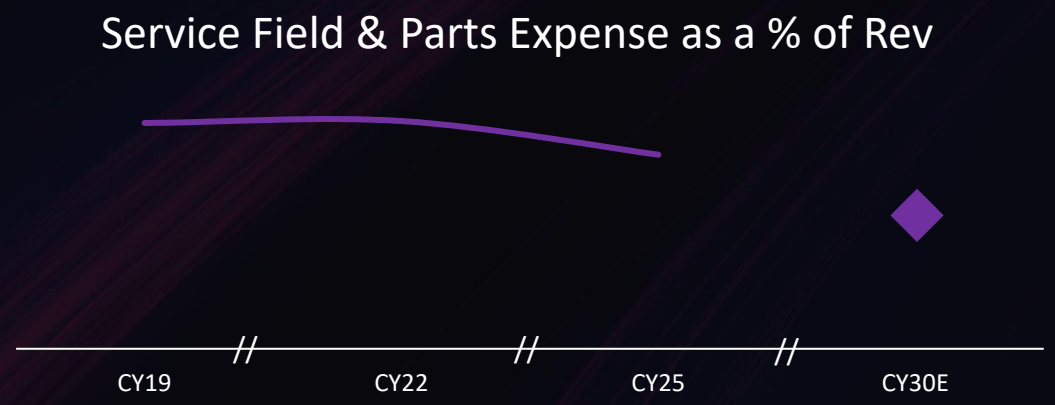

Business Execution

- Growth scale on KLA capacity
- Drive leverage in global operations through factory consolidation
- Productivity / automation

Industry Leading Product Gross Margins Driven by Differentiation & Business Execution

Service Gross Margin Improvement

Increasing Value of Service

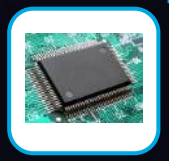

- Increasing system complexity / performance
- Higher value services improving customer cost of ownership (CoO)
- Extending lifetime of install base
- Delivering scale on infrastructure investments to support customer regionalization

Business Execution

- Productivity
  - Improve scheduled maintenance efficiency
  - Design for service in new product development
  - Automation / AI for troubleshooting, parts planning, and predictive maintenance

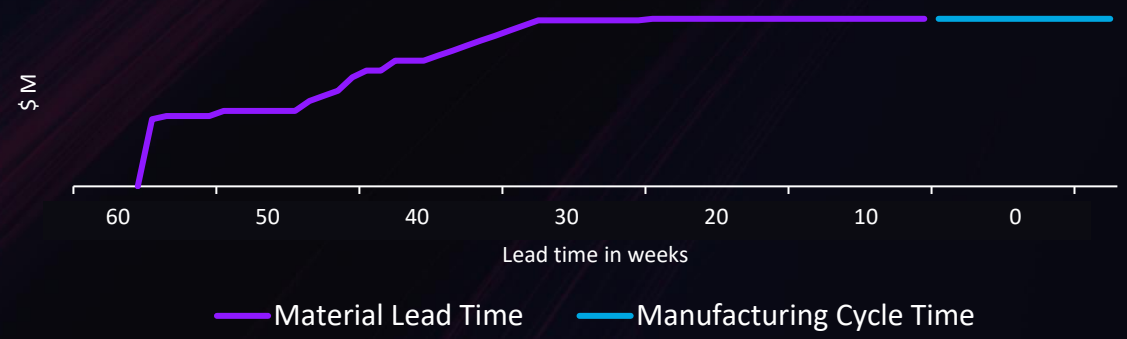

Increasing Service Value in Delivering System Performance / Availability with Operating Leverage

Case Study | Strategic Supply Chain Management

	Component Types	Parts Category
	Low volume, sole sourced highly complex components	Optics Sensors Lasers
	High volume, mostly sole sourced critical components	Volume Optics Stages Motion Control
	Tier 2, 3, 4 Component Suppliers	Semiconductors Electronic Components

Time Fence

Long materials lead-time require early commitments

Long-term strategic partnerships

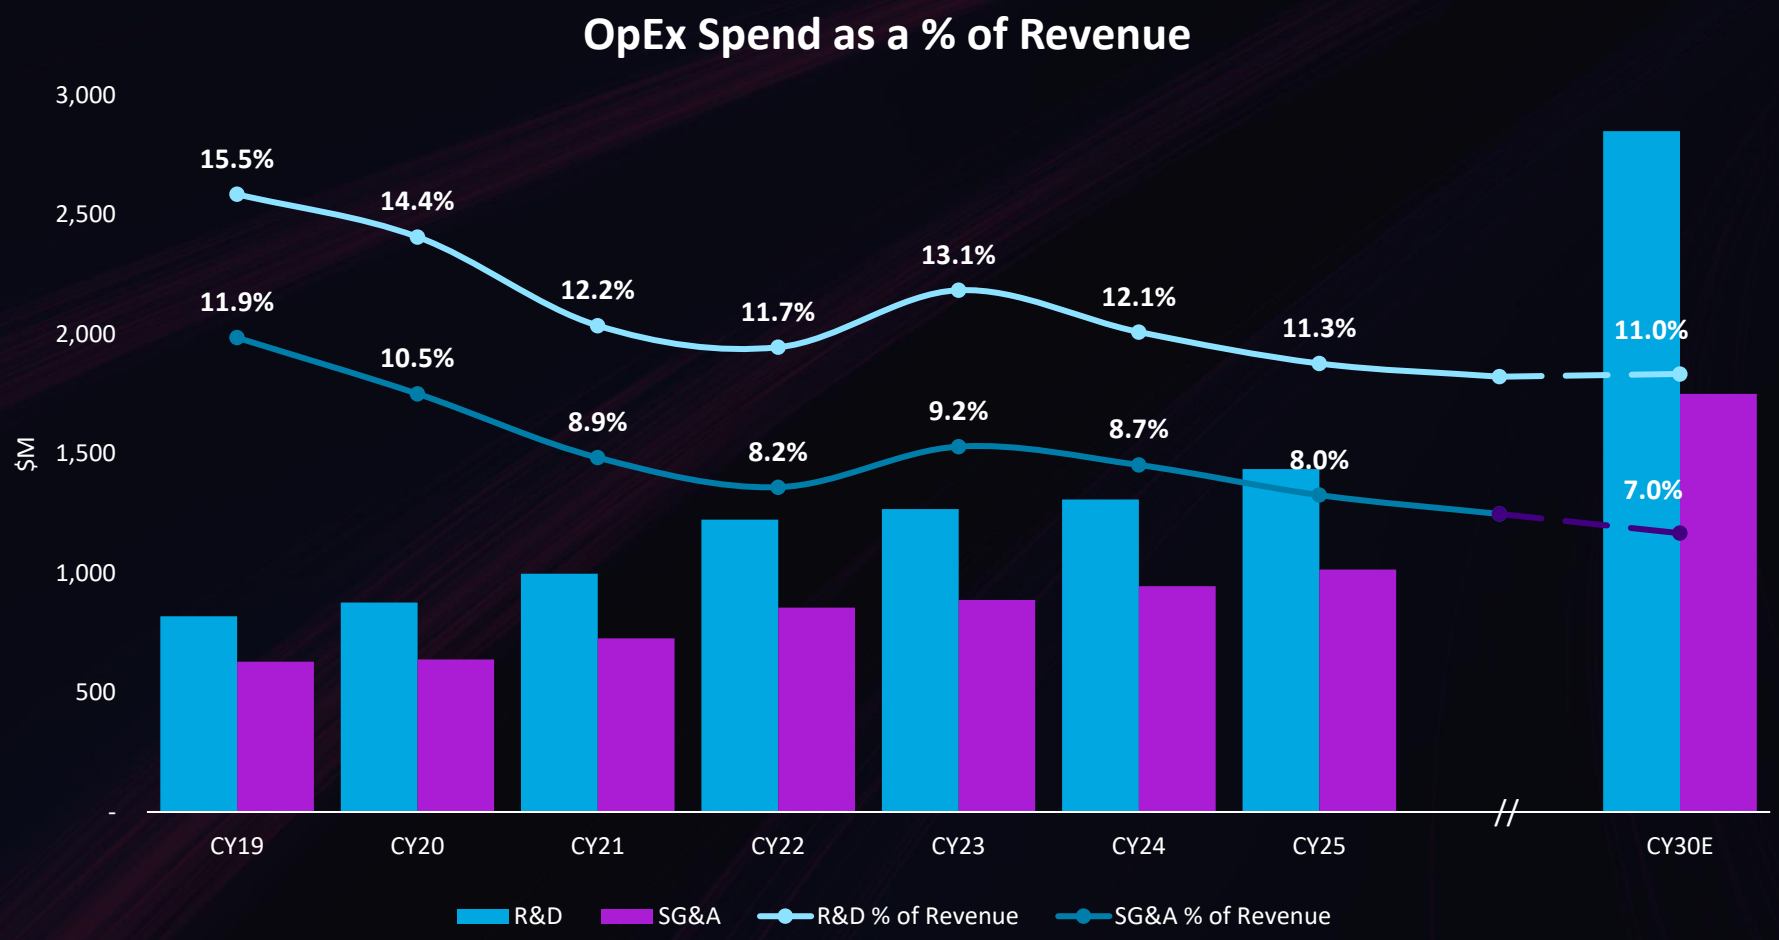

- Decades-long relationships with >95% of key suppliers under contract
- Engineering and supply chain closely integrated throughout product lifecycle
- Long-term commitments
- ~8 quarter planning visibility
- $250M+ in new KLA investment in supplier capacity over last ~2 years

Revenue Growth Versus Semi Cap Peers (21-22) [1]

Source: FactSet, Consensus as of 2/20/26 | [1]Semi Cap Peers include: AMAT, ASML, LRCX

Bending the SG&A Curve and Driving R&D Efficiency

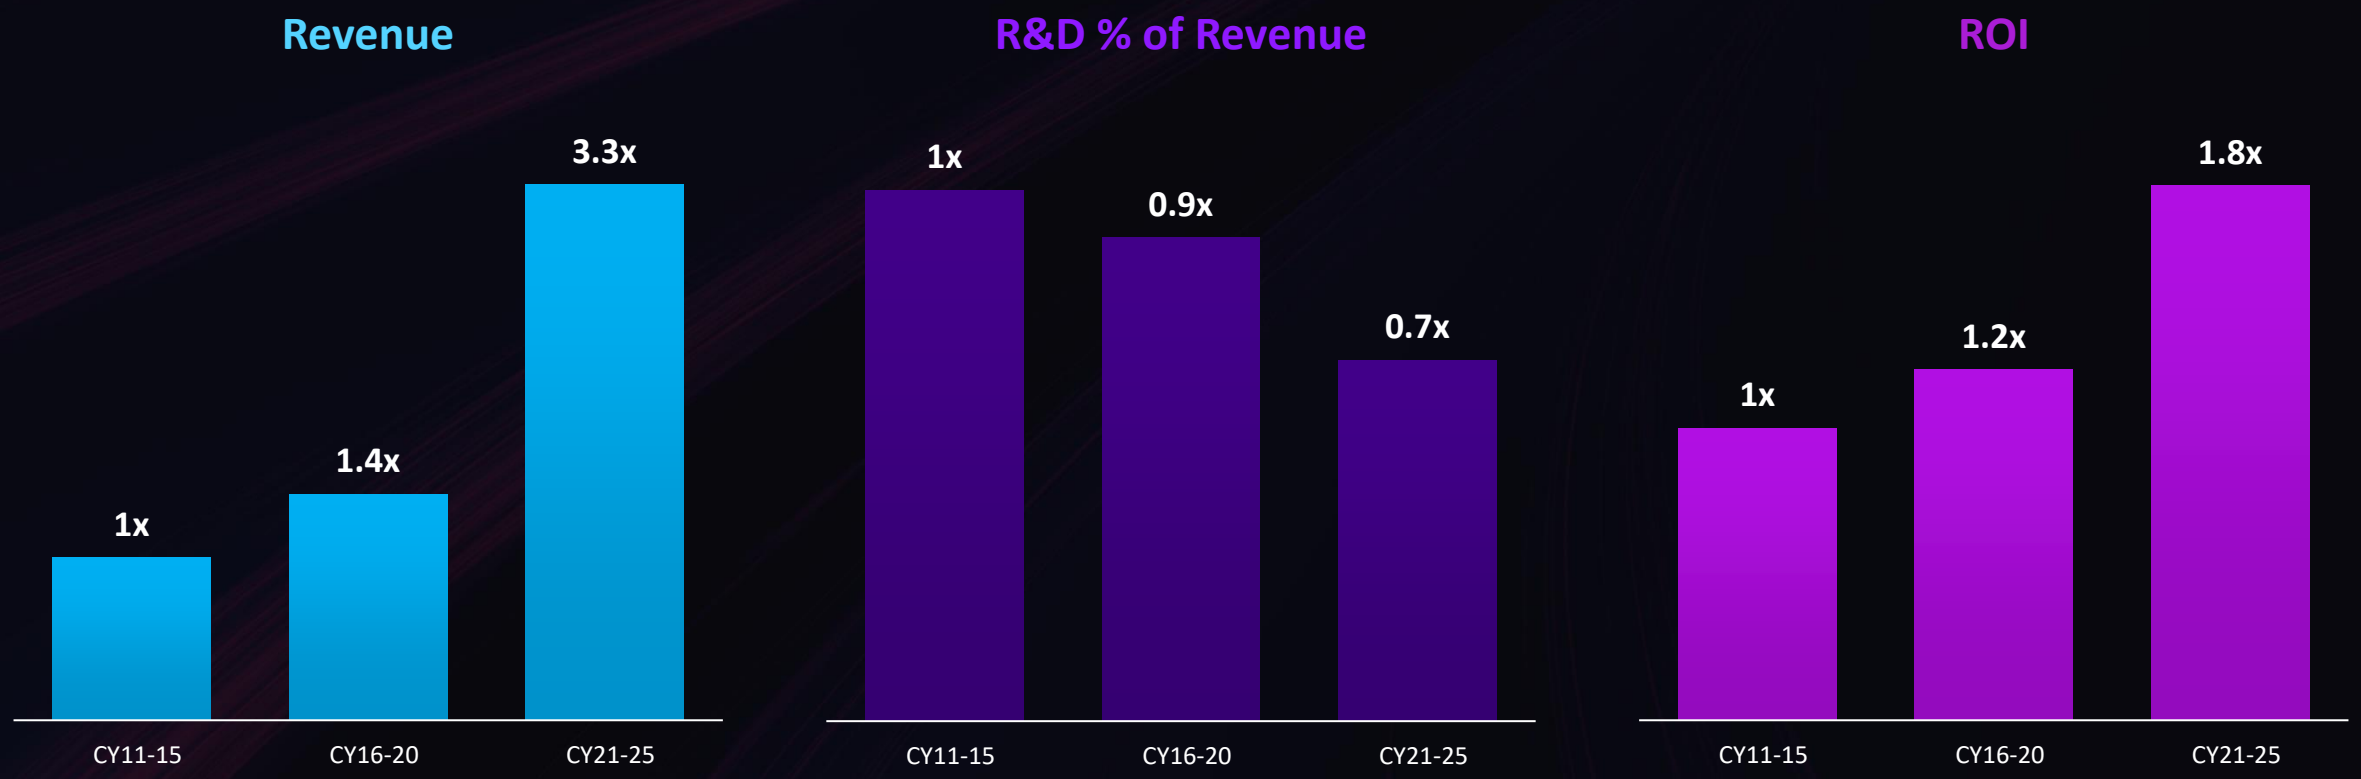

R&D
Driving productivity through growth scale, platform extendibility and AI

SG&A
Gaining efficiencies with scale, cost optimization and AI driven productivity

Operating Leverage Driven by Revenue Growth, Efficiency Gains and Platform Extendibility

Case Study | Pace of Customer Process Innovation and Scale Enables Platform Extendibility and Lower R&D Intensity

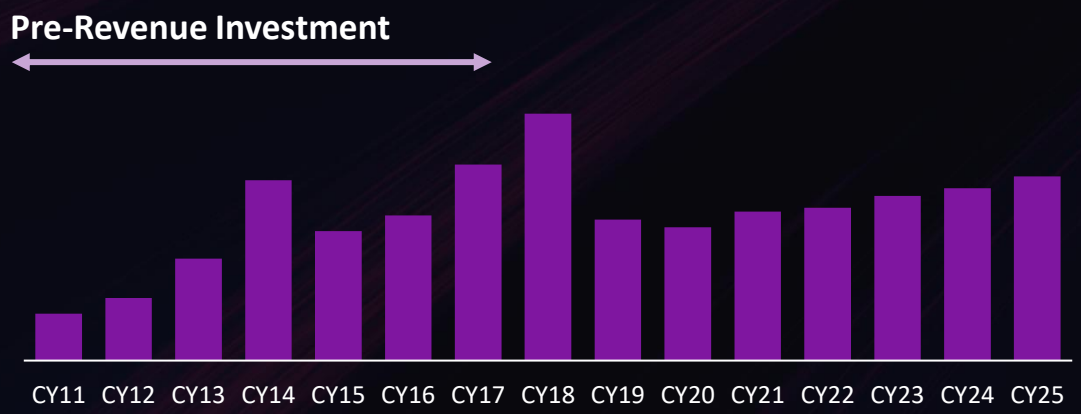

~30% R&D Intensity Decrease Drives Near 2X Return on Investment

Return on Investment (ROI) based on investment payback approach. Does not factor in time value of money.

Case Study |Leveraging Front End Platform & R&D Investment for Advanced Packaging

R&D Investment

Macro Inspection Revenue

Lower Incremental R&D to Extend Wafer Front End Product Platforms into Advanced Packaging

Committed to Leveraging AI Across KLA

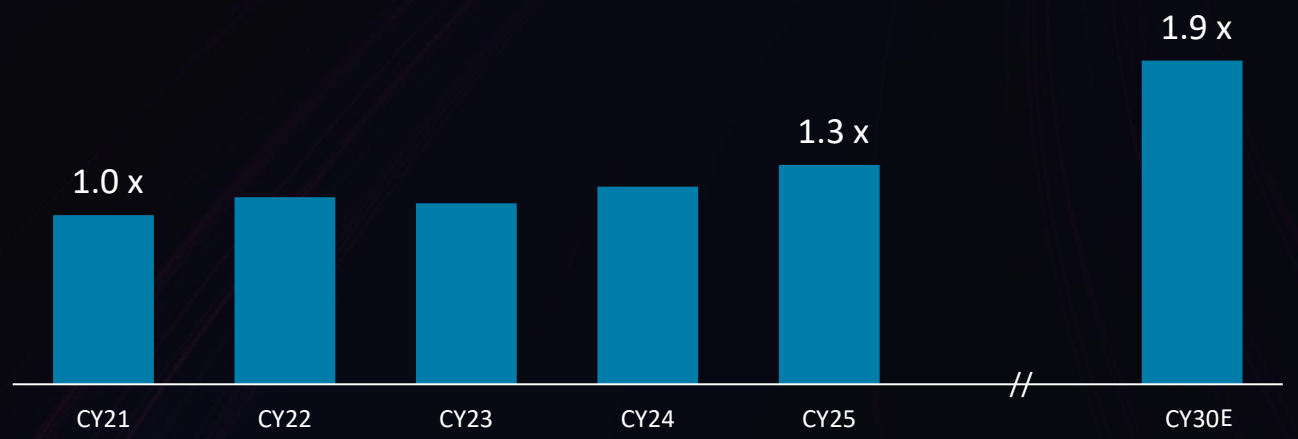

Increasing Automation

Leveraging AI to Drive Productivity, Employee Experience and Optimize Decision Making

AI Implementation in Business Operations Impacts Use Cases

Inventory & Supply Chain Optimization	Contract Management	Non-Conformance Writing Assistant
IT Help Desk Automation	HR Assistant	Training Assistant
Cyber Insider Threat	OpEx & Parts Expense Forecasting	Anomaly Detections
Procure to Pay Automation	Revenue Recognition Process Automation	Recruiting
Manufacturing Aide	Booking & Shipment Agent	Travel Policy Assistant
SaaS Systems Augmentation / Replacement	Freight & Trade Operations Planning / Optimization	Warehouse & Distribution Planning

Revenue Per SG&A Headcount Growth

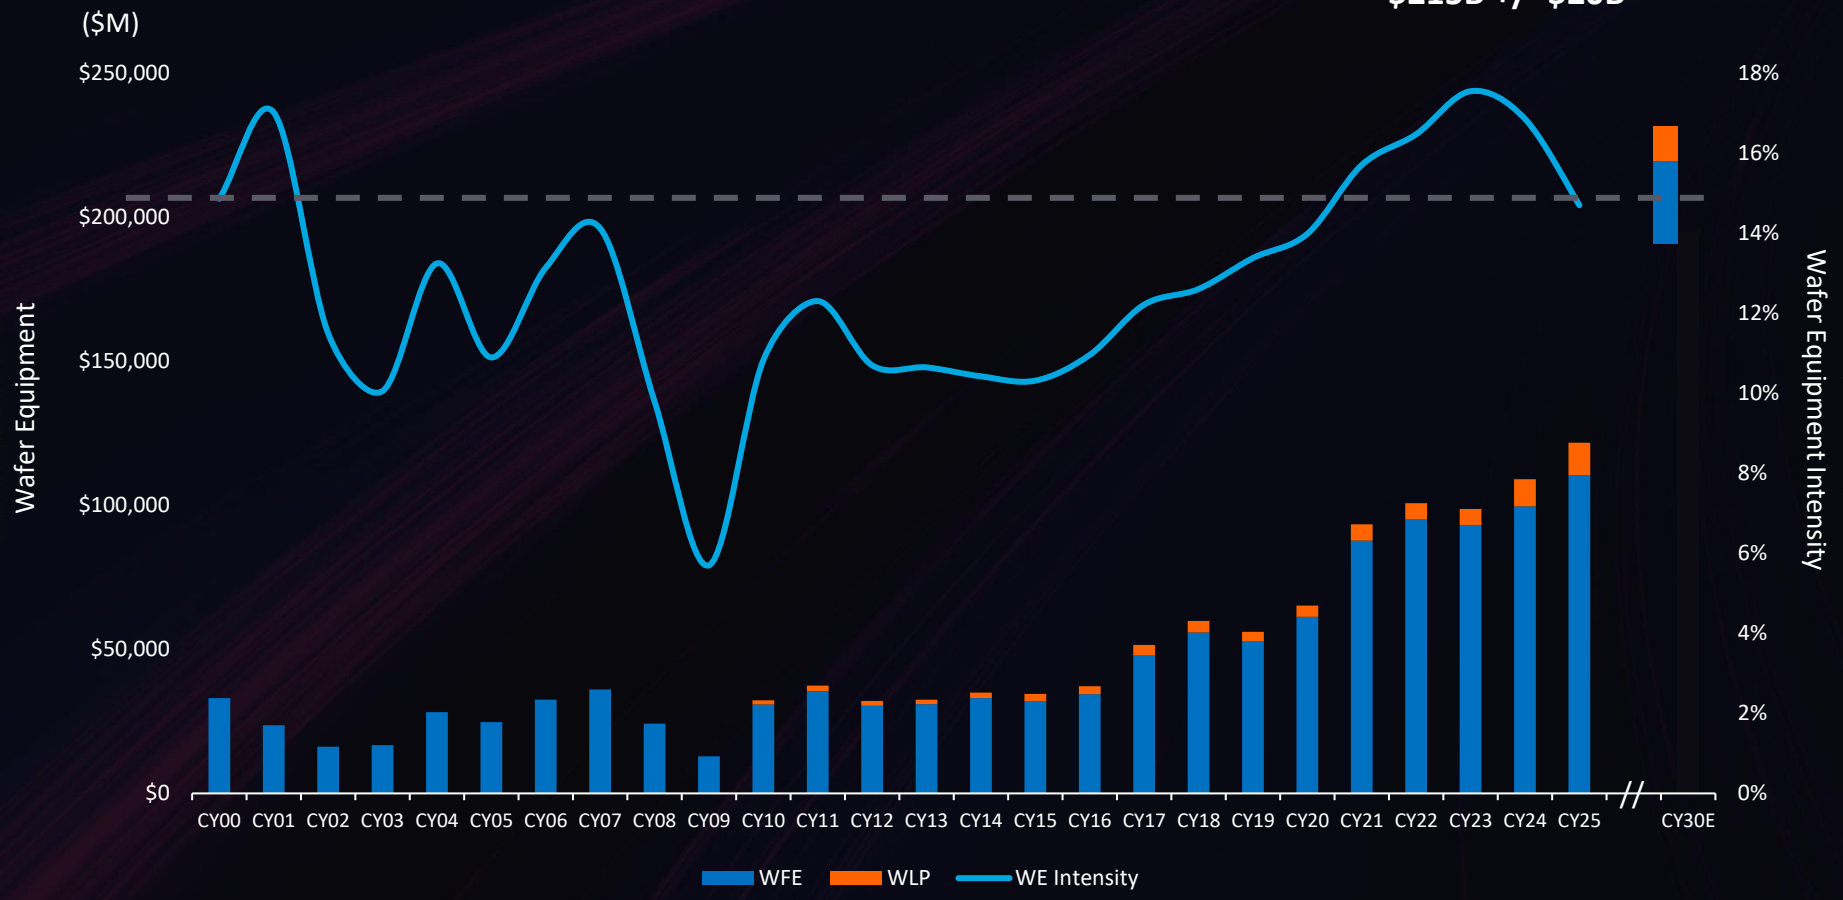

2030 Target Model

Wafer Equipment Intensity Remains Elevated Due to Leading-Edge Roadmap and HPC Demand

25 – 30 CAGR: ~12% at midpoint
Wafer Equipment Intensity: ~15%
$215B +/- $20B

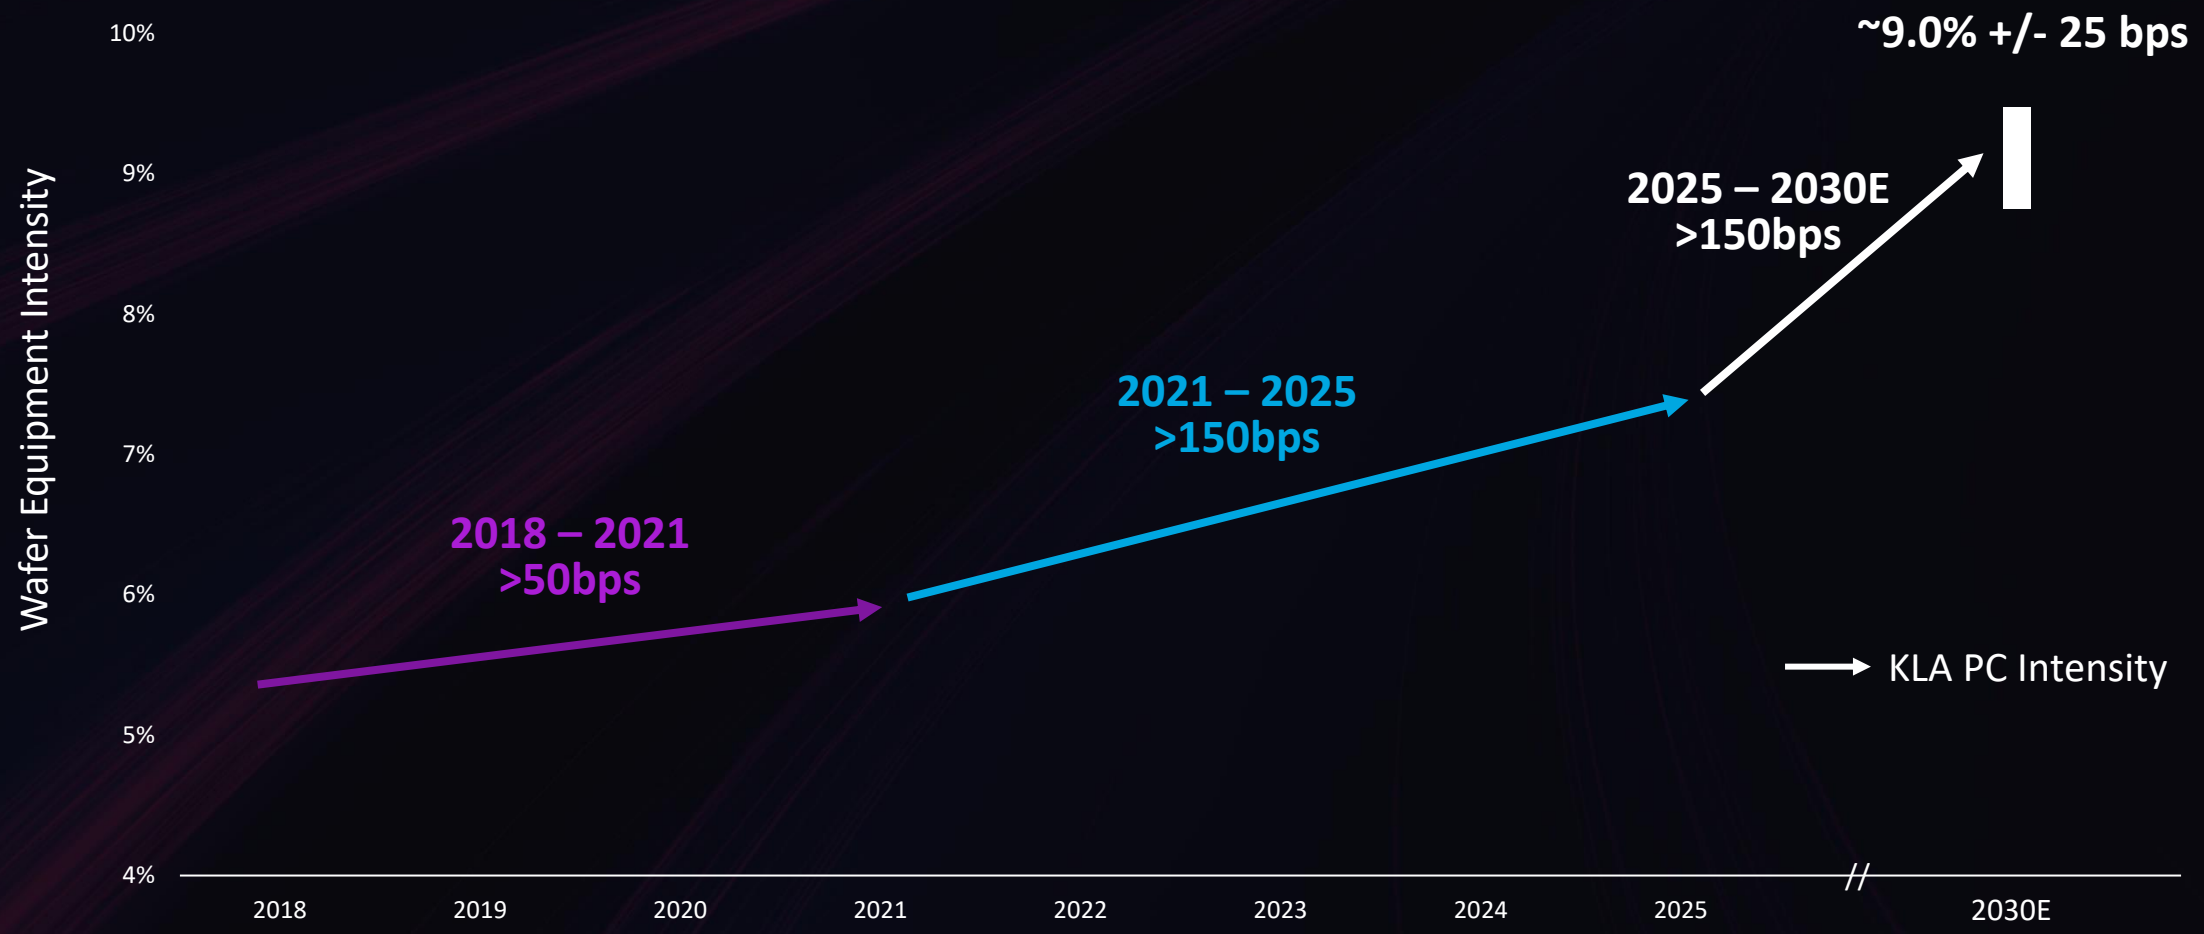

Drivers of Wafer Equipment Intensity

- AI accelerating growth
- Pace of technology inflection / process innovation
- Higher design mix
- Larger chip sizes
- Market competition
- Nationalization efforts
- Lower tool re-use
- No wafer size transition

Sources: KLA Analysis, Gartner Mar 2026, Techinsights Mar 2026

KLA Semi PC Share of Wafer Equipment: WFE + Advanced Packaging

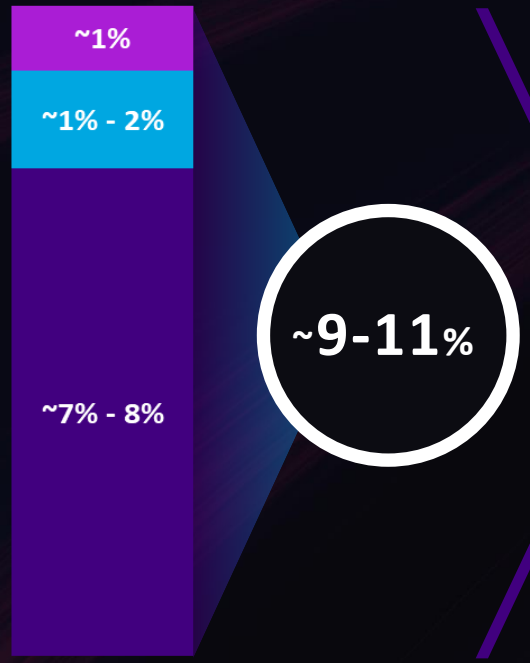

KLA PC Intensity = KLA Semi PC systems revenue / Wafer Equipment Market

Sources: KLA Analysis, Gartner Mar 2026, Techinsights Mar 2026

Long-Term Target Revenue Growth Model Update

2026E Model
(presented 6/16/22)

~9-11%

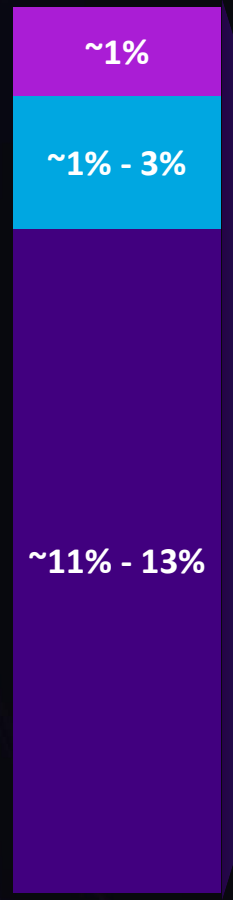

Growth Drivers

Industry Growth
- Accelerating High Performance Compute
- Diversification of end markets
- Flat to rising capital intensity

Intensity Improvement / Share Gain
- > 60% foundry / logic mix
- Process Control intensity momentum in core WFE
- Market Share opportunities in Process Control
- Advanced Packaging augments growth

Services Growth
- Growth in installed base
- Increase in tool life
- Increasing value of availability and performance
- Service opportunities in acquired business

2030E Model
(from 3/12/26)

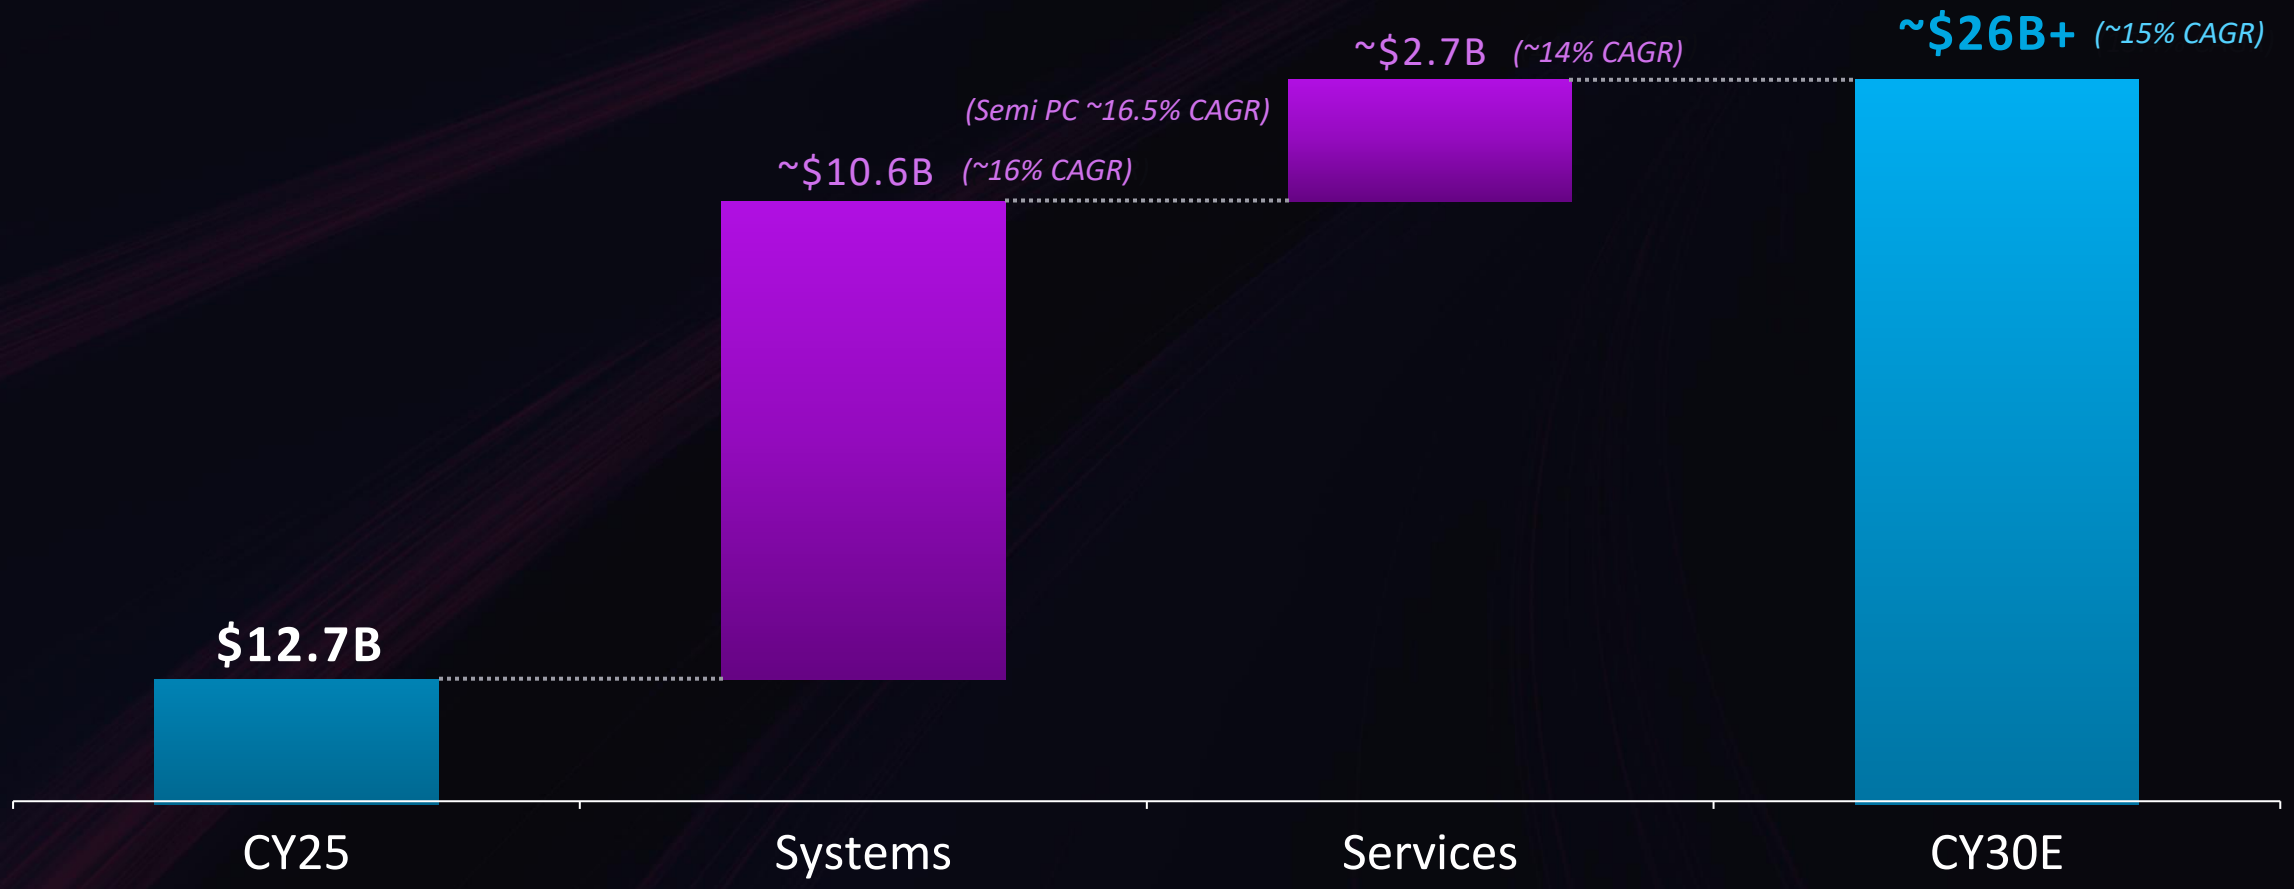

~13-17%

Through-Cycle Revenue Growth Targets

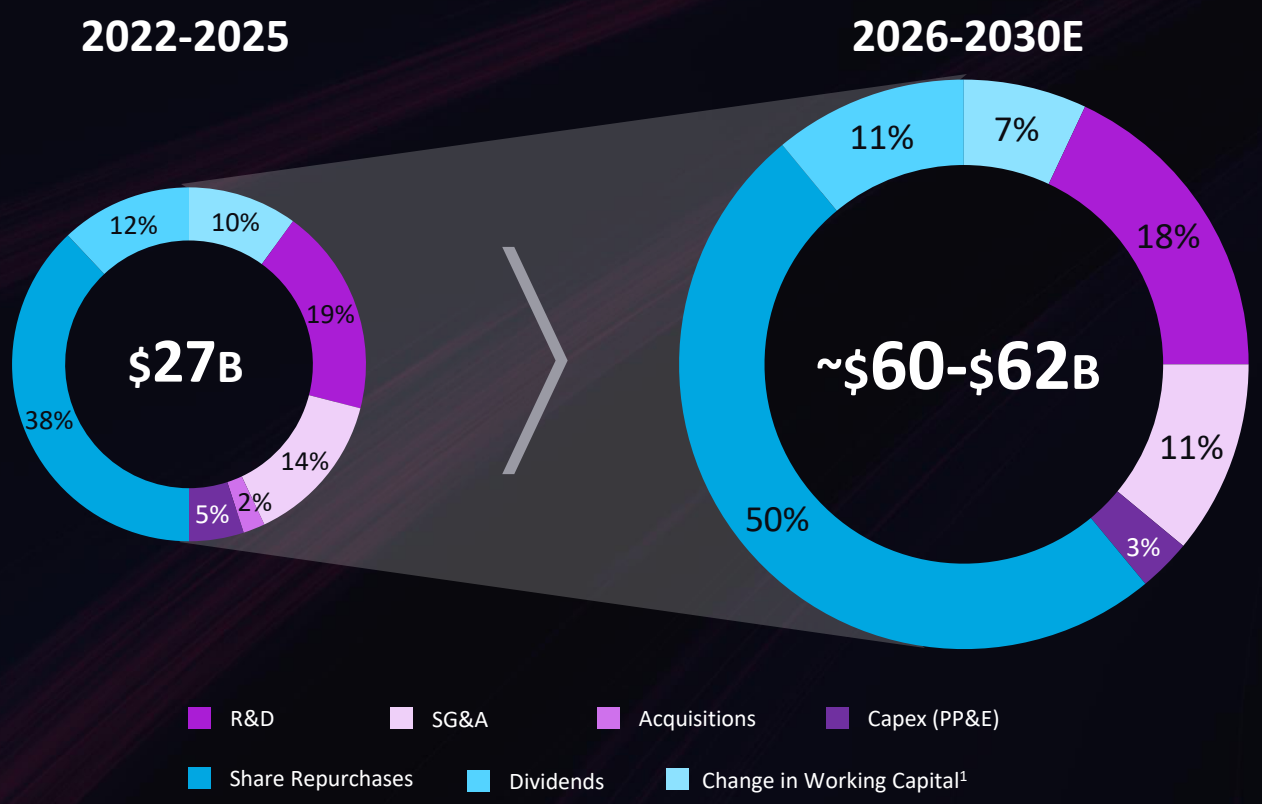

Industry Growth | Intensity Improvement / Share Gain | Services Growth

KLA 2030 Target Model | Driving Sustainable Outperformance

Mid-Teens Revenue CAGR from Systems and Services from 2025 to 2030E

Consistent and Disciplined Capital Allocation Supports Target Model

Primary Capital Priorities

- Fund investments to support collaboration and innovation model
- Invest in working capital to support customers and business execution
- CapEx to support growth
- Enable inorganic strategic growth with returns superior to other capital alternatives

Secondary Capital Priorities

- Capital returns (with long term target to return >90% of FCF to shareholders)
  - Annual dividend increases consistent with target model
  - Ongoing and consistent share repurchases

Strategic & Assertive Capital Allocation Fundamental to Meet/Exceed our 2030 Target Model

[1] Working Capital = Current Assets – Current Liabilities

Investment Grade Balance Sheet Supports Required Investments & Capital Allocation

Balance Sheet Summary[1]	($B)	Long Term Target Range
Total Cash[2]	$5.2	$4B - $5B
Revolver	$1.5	
Working Capital	$7.3	
Total Assets	$16.7	
Debt[3]	$5.9	
Total Shareholder Equity	$5.5	
Leverage Ratio[4]	1.0x	1.5 – 2.0x

Debt Ratings

Moody's	A2	
S&P	A-	
Fitch	A	

Capital Allocation Announcements

Share Repurchases

- Announced $7B Additional Share Repurchased Authorization
  - Increasing remaining authorization to ~$11B
  - To be executed over the next ~24 months (subject to market conditions)

Ongoing Dividend

- Announced our 17th consecutive annual dividend increase
- +21% to $2.30 / Qtr. or $9.20 annualized

Optimized Capital Structure to Support Business & Augment Shareholders Returns

[1] As of 12/31/25; [2] Total Cash includes Cash, Cash Equivalents and Marketable Securities;
[3] $64M in un-amortized debt issuance discounts and costs;
[4] Leverage Ratio = Total debt/Adjusted Consolidated EBITDA (trailing four quarters).

KLA 2030 Target Model Financial Framework

	2026 Target Model	2030 Target Model	Ongoing Financial Framework
Revenue	$14B +/- $500M	$26B +/- $2.5B	~13% - 17% CAGR
Gross Margin%[1]	~63%	~63.5% +/- 50 bps	
R&D%[1]	~13%	~11%	
SG&A%[1]	~8%	~7%	
Operating Margin%[1]	41-43%	45% - 47%	40% - 50% (Incremental)
Diluted EPS[1]	$38 +/- $1.50	$84 +/- $8	~1.3x Revenue Growth Rate
Capital Allocation	Target > 85% of FCF	Target > 90% of FCF	Hybrid Approach: Dividend + Repurchases

Macro Assumptions

- CY25-CY30E semiconductor industry CAGR of ~11%
- Wafer Equipment grows ~1 pt. faster than Semi to $215B +/- $20B
- ~60% foundry / logic, ~40% memory
- Process Control market grows > WFE

Business Assumptions

- Intensity / market share gain at leading edge of core WFE
- Advanced Packaging augments growth
- KLA share of Wafer Equipment grows > 150 bps
- Services grows 13-15%
- EPC grows mid-high single digits
- Planning tax rate at 14.5%

Focused on Driving Consistent, Profitable Growth and Delivering Shareholder Value

[1]Non-GAAP measure

Key Takeaways

1

KLA is a best-in-class outperformer uniquely positioned for continued growth as the semiconductor industry continues to advance in complexity

2

KLA's strong customer intimacy and commitment to collaboration, innovation and execution have positioned the company well to deliver on R&D roadmaps that meet customer needs and advance competitive differentiation

3

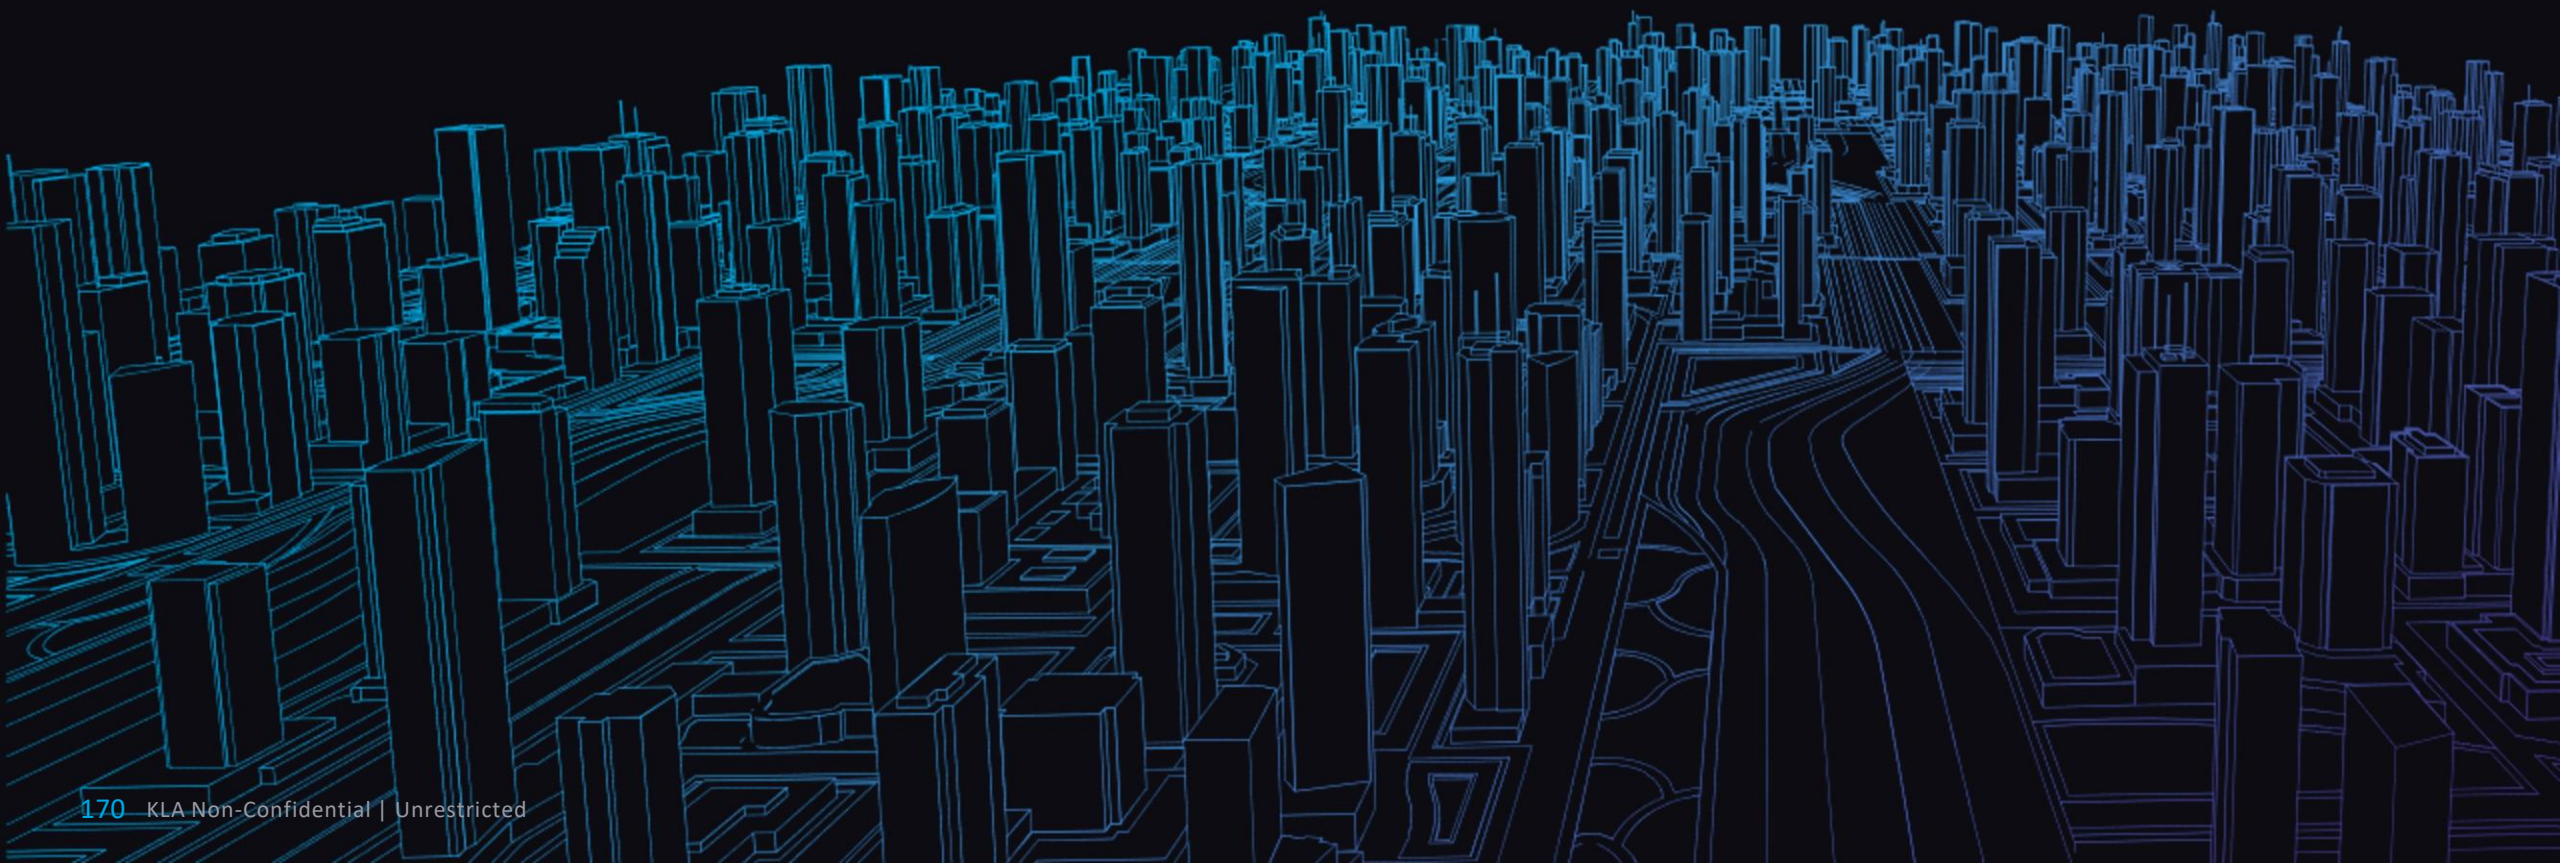

KLA's operating model and focus on execution ensure continuous improvement and have enabled KLA Services to deliver an industry-leading model driving continuous growth with subscription-like revenue and positive customer experiences

4

2030 target model builds on credible history of execution. Drives relative growth, operating leverage and an assertive and consistent capital allocation strategy enabled by strong free cash flow and an investment-grade balance sheet

Structural Semi Growth + Intensity / Share Gains + Operating Leverage + Disciplined Capital Returns = Durable EPS Compounding
